1. Dairy-work, Comm., &c.: The fatty portion of milk or cream solidified by churning. In the making of butter, the cream is collected from time to time and kept in covered jars. When a sufficient quantity of cream has been obtained, it is transferred to a churn, or other suitable apparatus, and kept constantly agitated, until the butter forms. In order to preserve the flavor and color, it is important that the agitation should be as regular as possible, and that the temperature in the churn should never exceed 64° Fahr. As soon as the churning is finished, the butter is thoroughly washed with cold water to free it from the adhering butter-milk, and a small quantity of salt, not exceeding 2 per cent., is worked into it.

Pure butter should consist entirely of milk fat, with a small and variable quantity of water; but in the process of manufacture it is found impossible to exclude altogether the other constituents of the milk. We find, therefore, in genuine butter, from 0.8 to 2.0 per cent. of caseine, or curd, and a trace of milk sugar. The "fat" of butter consists of the glycerides of the insoluble fatty acids—stearic, palmitic, and oleic—in combination with from 5 to 7 per cent. of the glycerides of the soluble or volatile fatty acids, principally butyric. The characteristic taste and smell of butter are chiefly due to the presence of these volatile acids.

For many years it was held by chemists of considerable repute that milk fat was similar in every respect to pure beef and mutton fats, and that there were no means of detecting foreign fat, when added to butter. The whole subject has been thoroughly investigated by various chemists, and two methods of examination have been devised. One of them is based on the fact that the amount of the insoluble fatty acids in butter is less than that found in the other animal fats, and that these fats are almost devoid of the soluble fatty acids. The other method consists in determining the specific gravity of the butter fat, at a temperature of 100° Fahr. The estimation of the insoluble fatty acids is a tedious process, attended with difficulty, and requiring great care. On the other hand, the specific gravity of the butter fat can be ascertained with ease and rapidity by any chemist of ordinary skill. Each of these methods is valuable in itself, but when taken together they render the detection of fat adulterants comparatively easy.

RESULTS OF ANALYSES OF BUTTER AND OTHER ANIMAL FATS.

Description of Sample.	Per cent. of insoluble fatty acids.	Specific Gravity at 100° Fahr.
Butter.....	86 to 88	911 to 913
Mutton fat.....	95.8	902.8
Beef fat.....	95.9	903.7
Lard.....	95.2	903.8

Butter is an article of food very frequently adulterated, the chief adulterants being water, curd, and prepared animal fats. The quantity of water in butter should never exceed 15 per cent. In some

cases as much as 30 per cent. has been found. Curd is sometimes used to increase the bulk and weight of the butter; any excess above 4 per cent. should be considered an adulteration. Animal fats, as the fat of beef, mutton, and pork, are prepared on a large scale and sold under the names of "butterine," "oleo-margarine," &c. These are frequently added to butter to the extent of from 50 to 70 per cent. [BUTTERINE.] So long as the fats used are pure and good, and the purchasers know that they are not buying butter, but a mixture of butter and fat, there can be no objection to its sale; but when this mixture is sold as genuine butter, at a genuine-butter price, the seller renders himself justly liable to the penalties prescribed by law. An excessive quantity of common salt is sometimes added to butter for the purpose of causing it to absorb and hold more water. Fresh butter should not contain more than 2 per cent. of salt, whilst salt butter should never exceed 6 per cent.

2. Botany:

Butter and eggs: Several plants, the flowers of which are of two shades of yellow; *spec.*, (1) *Narcissus pseudonarcissus*; (2) *N. incomparabilis*; (3) *N. biflorus*; (4) *N. poeticus*; (5) the double-flowered variety of *N. aurantiacus*; and (6) *Linaria vulgaris*, with other plants of which the name *butter* and *eggs* is known only locally. (Britten & Holland.)

3. Vegetable Chem.: A name given to certain concrete fat oils, which continue of a butyraceous consistence at ordinary temperatures.

(1) *Butter and Tallow:* A greasy juice found in various parts of the butter and tallow tree, but specially in the fruit.

¶ *Butter and Tallow Tree:* The *Pentadesma butyracea*, a Sierra Leone tree belonging to the order Clusiaceæ, or Guttifera. It has large handsome flowers, and opposite coriaceous leaves with parallel veins. [(1).]

(2) *Butter of Cacao:* A concrete oil, obtained from the seeds of *Theobroma cacao*.

(3) *Butter of Canara:* A solid oil, obtained from the fruits of *Vateria indica*, and called Piney-tallow.

*4. *Inorganic Chem.:* Old names for various chemical compounds, specially for chlorides. They were so-called from their soft butyraceous consistence.

¶ (1) *Butter of Antimony:* Sesquichloride of antimony, terchloride of antimony. [ANTIMONY.]

(2) *Butter of Arsenic:* Sesquichloride of arsenic.

(3) *Butter of Bismuth:* Chloride of bismuth.

(4) *Butter of Sulphur:* Precipitated sulphur.

(5) *Butter of Tin:* Sublimated muriate of tin, protochloride of tin.

(6) *Butter of Zinc:* Chloride of zinc.

B. As adjective: (See the compounds.)

butter-ball, *s.*

1. A species of small duck (*Charitonetta albeola*). Called also *buffel duck*.

2. A small portion of butter served in the form of a ball at the dining table.

butter-bird, *s.* A name given in Jamaica to the Bobolink (*Dolichonyx oryzivorus*.)

butter-boat, *s.* A small vessel for holding melted butter at table.

"Nae doubt it was for fear of the soup, and the *butter-boats*, and the like."—Scott: *St. Ronan's*, ch. xxii.

butter-bur, *s.* [So called because the country housewives used to wrap their butter in the large leaves of these plants.] The English name of *Petasites*, a genus of Composites. The Common Butter-bur (*Petasites vulgaris*) is a rank weed growing commonly in wet meadows and by roadsides. The root creeps to a distance. The pale flowers, which appear before the leaves, are attractive to bees. The leaves are very large.

butter-dock, *butter dock*, *s.* A plant, *Rumex obtusifolius*.

butter-fish, *s.* [So called from a copious mucous secretion on its skin.]

Ichthyol.: The Spotted Gunnel (*Murcenoides guttatus*).

butter-jags, *s. pl.* Two plants: (1) *Lotus corniculatus*, (2) *Medicago falcata*.

butter-mold, *s.*

Husbandry: An implement by which pats of butter of a given size are shaped and printed for market. (Knight.)

butter-print, *s.* A piece of carved wood, used to mark butter. It is called also a BUTTER-STAMP.

"A *butter-print* in which were engraven figures of all sorts and sizes, applied to the lump of butter, left on it the figure."—Locke.

butter-scotch, *s.* A kind of candy composed mainly of butter and sugar.

butter-stamp, *s.* The same as BUTTER-PRINT (*q. v.*).

butter-tongs, *s.* An implement for cutting and transferring pieces of butter.

†**butter-tooth**, *s.* An incisor tooth.

butter-tree, *s.*

Bot.: A name given to several trees belonging to the order Sapotaceæ.

1. Indian Butter-tree (*Bassia butyracea*). It is called also the Phulwara. It is a native of Nepaul and the Almorah hills. A white fatty substance is pressed from its seeds. It can be burnt, makes good soap, and is used to adulterate ghee, to dress the hair, and as an application in rheumatism. The juice of the flowers furnishes a kind of sugar.

2. The African Butter-tree, or Shea-tree (*Bassia Parkii*). It produces the galam-butter mentioned by Mungo Park. The "butter" is a white fatty substance extracted from the seeds by boiling them in water. It is an important article of commerce at Sierra Leone.

butter-worker, *s.*

Agric.: An implement for pressing and rolling butter to free it of the buttermilk. It may be a fluted roller working in a bowl or on a board, or a conical roller on a slanting board, which permits the buttermilk to run off. (Knight.)

*büt-tër (2), *s.* [BITTERN.] (Scotch.) (Jamieson.)

butter-bump, *s.* The bittern.

büt-tër (3), *s.* [BUTT, *v.*]

Wood-working: A machine for sawing off the ends of boards, to render them square and to remove faulty portions.

büt-tër, *v. t.* [From Eng. *butter*, *s. (q. v.)* In Ger. *buttern*; Fr. *beurrer*.]

I. Ordinary Language:

1. Lit.: To spread with butter.

2. Figuratively:

(1) *With "bread" for the object:* To make any thing in one's lot more palatable.

¶ *To butter both sides of one's bread:* To attempt to obtain advantages from more sides than one.

"Upon all topics; 'twas, besides, his bread,
Of which he *butter'd* both sides; 'twould delay."

Byron: *The Vision of Judgment*, 96.

(2) *With a person for the object:* To flatter, to coax. (*Vulgar.*)

*II. *Gaming:* To increase the stakes every throw or every game. (*A cant term.*) [BUTTERING.]

*büt-tër-aced, *a.* [BUTRESSED.]

"Imbattalled, vaulted, and chareroofed, sufficiently *butteraced*, . . ."—*A Journey through England (1724)*. (Halliwell: *Contrib. to Lexicog.*)

büt-tër-cüp, **büt-tër-cüps**, *s.* [Eng. *butter; cup*.] [BUTTERFLOWER.] A name given to the *Ranunculus* genus, and specially to *Ranunculus acris*, *R. bulbosus*, *R. repens*, *R. ficaria*, and *R. auricomus*. (Britten & Holland, &c.)

Water Buttercup: Two plants: (1) *Ranunculus aquatilis*, (2) *Caltha palustris*.

büt-tër-flip, *s.* One of the names of a bird, the Scooping Avocet (*Recurvisora avocetta*).

büt-tër-flöw-ër, *s.* [Eng. *butter; flower*.] So called, apparently, because ignorant people once thought that the yellow color of butter arose from the cattle eating these plants, which they never do. (Curtis.)

1. Gen.: The same as *buttercup*; the popular English name of the plants belonging to the genus *Ranunculus*.

2. Specially:

(1) One of the names popularly given to a plant, the *Ranunculus bulbosus*, or Bulbous Crow-foot. It is called also Buttercups, King's-cups, and, by Shakespeare, Cuckoo-buds of yellow hue. It flowers in May, and may, without digging for its root, be accurately identified by observing that the segments of its calyx are reflexed, whereas in *R. repens*, often confounded with it, they are tolerably erect.

"The watered meadows are yellow with *butterflowers*."—Aubrey: *Nat. Hist. of Wilts.* (Britten & Holland.)

(2) *Ranunculus acris*.

(3) *R. repens*.

(4) *R. ficaria*.

(5) *R. auricomus*.

Great butterflower: A ranunculaceous plant (*Caltha palustris*).

büt-tër-flÿ, *büt-tër-flie, *bot-ur-flÿe, *s. & a.* [Eng. *butter; fly*; A. S. *buter-flege* (*Sommer*); *butter-fleoge*; Dut. *boter-vliege* (*Skeat*); Ger. *butterfliege*. Why so called is not certain. It may be from appearing at the beginning of the season for butter, or because some species are yellow, or because the droppings of some are butter-like.]

A. As substantive:

I. Ordinary Language:

1. Lit.: In the same sense as II.

2. Fig.: A person who is dressed attractively, but is shallow in intellect and of no perceptible use to society.

"The fops are painted *butterflies*."

Pope: *To Moore, the Worm Doctor*, 17.

böl1, böy; pöüt, jöw1; cat, çell, chorus, çhin, bench; go, gem; thin, ðis; sin, aʒ; expect, Xenophon, exist. ph = f -cian, -tian = şan. -tion. -sion = şün; -tion, -sion = zhün. -tious, -cious, -sious = şüş. -ble, -dle, &c. = bel, del.

II. Entom.: The English name for any species of the Diurnal Lepidoptera, or Rhopalocera. The antennæ end in a club; the wings in repose are generally quite upright, and there are no bristles on the hinder pair. They fly by day, while their allies the Hawk-moths do so by twilight, and the Moths by night. Before coming to the perfect state they exist first as the caterpillar, and afterwards in the chrysalis state. Butterflies exist in all climates except those marked by extreme cold; the tropical species are, however, most numerous, besides being the largest in size and, as a rule, the brightest in coloring. The Butterflies, or Diurnal Lepidoptera, are divided into four families: Papilionidæ, Nymphalidæ, Lycenidæ, and Hesperidæ (q. v.).

B. As adj.: (See the compounds.)

butterfly-cock, s. A valve having two semi-circular wings pivoted on a central cross-bar. A butterfly-valve.

butterfly-fish, s. [Named from the color.] A name for a fish, the Ocellated Blenny (*Blennius ocellaris*). It has the dorsal fin bilobate. Its anterior lobe is elevated and marked with a round and black spot, surrounded with a white circle and a black one. It is found on the English coast.

butterfly-net, s. A net of very fine gauze, attached to a handle, and used by entomologists for capturing butterflies, moths, &c.

butterfly-nut, s.

Mach.: A nut having two wings attached, so that it may be easily turned by hand.

butterfly orchid, s.

Bot.: A common book-name for two varieties of orchids, viz.: (1) *Habenaria chlorantha*; (2) *Habenaria bifolia*.

butterfly-plant, s.

Botany:

1. The name of an Orchid (*Oncidium papilio*) brought from Trinidad. It is so called because its large yellow and red blossoms, poised on slender footstalks so as to vibrate with every breath of wind that blows, resemble butterflies hovering on the wing.

2. The Indian Butterfly Plant, *Phalænopsis amabilis*, of Lindley, not of Blume, is another Orchid. It is a very beautiful epiphyte.

butterfly-shaped, a.

Bot.: Somewhat resembling the aspect of a butterfly on the wing. Used especially of the corolla, in what have been called, from the same circumstances, papilionaceous flowers. [PAPILIONACEOUS.]

butterfly-shell, s. Any shell of the genus *Voluta*.

butterfly-valve, s. A double clack-valve, each leaf of which is hinged to a bar crossing the passage-way. There are butterfly pump-valves and butterfly throttle-valves.

butterfly-weed, s. A plant (*Asclepias tuberosa*).

büt'-tēr-ine, s. [From Eng. *butter*, and suff. *-ine*.] A substance prepared in imitation of butter from animal or vegetable fats. The fat is first freed from all impurities, and by heat converted into oleine. The oleine is then transferred to a churn containing a small quantity of milk, and churned into butterine. Lastly, it is colored, in imitation of butter. Freshly prepared, it is sweet and palatable, and when spread on bread or cold toast, is but slightly inferior to a fair quality of butter. The process has attained such perfection in the matter of manufacture in the United States that it takes an expert to distinguish it from genuine butter, and laws have been passed compelling tradesmen to label each package containing it so that none can be deceived. [BUTTER.]

büt'-tēr-īng (Eng.), **büt'-tēr-īn'**, *pr. par. & s.* [BUTTER, v.]

A. As present participle: (See the verb.)

"It is a fine simile in one of Mr. Congreve's prologues, which compares a writer to a *buttering* gamester, that stakes all his winning upon one cast: so that if he loses the last throw he is sure to be undone."—*Addison*.

B. As substantive: Flattery.

büt'-tēr-īs, s. [From Fr. *boutoir*=a tool used by curriers and farriers; Prov. *boutevan* (?).]

Farriery: A knife with a bent shank, used by blacksmiths to pare the hoofs of horses. It has a blade like a chisel, and is operated by a thrust movement, the handle resting against the shoulder.

büt'-tēr-man, s. [Eng. *butter*; *man*.] A man who sells butter.

büt'-tēr-milk, s. [Eng. *butter*; *milk*. In Gr. *buttermilch*.] That part of the milk which remains when the butter is extracted.

"A young man, fallen into an ulcerous consumption, devoted himself to *buttermilk*."—*Harvey*.

buttermilk ore, s.

Min.: Dana's rendering of the German term *Buttermilcherz*, a mineral, the same as Cerargyrite (q. v.).

büt'-tēr-nūt, s. [Eng. *butter*; *nut*.] The English name of an American tree, called also the Oil-nut and the White Walnut. It is the *Juglans cinerea*. It has oblong, lanceolate, serrate leaflets, downy beneath. The petioles are viscid and the fruit oblong ovate. It grows to the height of thirty feet. The North American Indians use the nuts as cathartics. The bark is used, as is the bark of several other species of the *juglans*, in the economy of the housewife as a dyeing agent.

büt'-tēr-wēed, s. [Eng. *butter*; *weed*.] A composite plant, *Erigeron canadensis*.

büt'-tēr-wife, s. [Eng. *butter*; *wife*.] A woman who sells butter. [BUTTERWOMAN.]

***büt'-tēr-wōm-an, s.** [Eng. *butter*; *woman*.] A woman who sells butter. [BUTTERWIFE.]

"Tongue, I must put you into a *butter-woman's* mouth, . . ." *Shakesp.:* *All's Well*, iv. 1.

büt'-tēr-wōrt, s. [From Eng. *butter*, A.S. *butere*, and A.S. *wyrt*=wort, an herb, a plant. The leaves coagulate milk, like rennet.]

Botany:

1. *Sing.:* The English name of Pinguicula, a genus of plants constituting the typical one of the order Lentibulariaceæ (Butterworts). The Common Butterwort has the leaves, which are thick and greasy to the touch, all radical. The flowers are in single-flowered scapes, purple in color, with a spur. The capsule is one-celled. There are other well-known species of the genus, as for instance the Large-flowered (*pinguicula grandiflora*), the Alpine (*P. alpina*), and the Pale (*P. lusitanica*). The alpine one has yellowish flowers.

2. *Plur.:* Lindley's name for the order Lentibulariaceæ. The type is Pinguicula. [See 1.]

büt'-tēr-ŷ, a. & s. [Eng. *butter*; *-y*.]

A. As adjective:

1. Having the appearance of butter.

2. Possessing the qualities of butter.

"Nothing more convertible into hot choleric humors than its *buttery* parts."—*Harvey*.

B. As substantive:

1. A room in which butter, milk, &c., are kept; a pantry.

2. The room in which provisions are kept. (Now chiefly at colleges, and universities.)

"Now sought the castle *buttery*."

Scott: *The Lay of the Last Minstrel*, vi. 8.

büt'-tīng, *but-tinge, pa. par. & s. [BUTT, v.]

A. As pr. par.: (See the verb.)

B. As subst.: The act of striking.

"*Buttinge* with sharpe speres."—*Havelok*, 2,320.

butting-joints, s.

Carp.: The same as *butt-joint* (q. v.).

butting-machine, s.

Machinery: A machine having planing-cutters on the face of a disc-wheel, and used for smoothing, cornering, or rounding the ends of joists or small timbers used in the frames of agricultural implements, etc. The stuff is laid alongside to fence or gage, and is fed up endwise to the cutter.

butting-ring, s.

Vehicles: A collar on the axle against which the hub butts, and which limits the inward movement of the wheel, as the linch-pin or axle-nut does the outward.

butting-saw, s. A cross-cut saw attached to a stock at one end, and used for butting logs on the carriage of a saw-mill.

***bütt-nēr-ī-ā'-çē-æ, s. pl.** [BYTTNERIACEÆ.]

büt'-tōck, *büt-tōcke, *büt-tōk, *büt'-tōke, *bot-tok, *bot-ok, s. & a. [From Eng. *butt* (1), s., and dimin. suff. *-ock*.]

A. As substantive:

1. *Ord. Lang.* (generally in the pl. *buttocks*): The rump, the protuberant part behind.

"The tail of a fox was never made for the *buttocks* of an ape."—*L'Estrange: Fables*.

2. *Shipbuilding:* The round-in, overhanging part on each side and in front of the rudder; terminating beneath by merging into the run.

B. As adj.: (See the compounds.)

buttock-lines, s. pl. The curves shown by a vertically longitudinal section of the after-part of a ship's hull, parallel to the keel. A similar section forward exhibits the bow-lines, and a continuous section through the whole length of the ship the buttock and the bow-lines.

***buttock-mail, s.** A fine imposed on any one convicted of fornication, in lieu of his sitting on stool of repentance.

" . . . yer *buttock-mail*, and yer stool of repentance." *Scott:* *Waverley*, ch. xxx.

büt'-tōcked, *büt'-tōckt, a. [Eng. *buttock*; *-ed*.]

In compos.: Having buttocks of a particular type.

" . . . sharp rumped and pin *buttockt* also."—*Holland: Plinie*, xxix. 6.

büt'-tōn, *bot-hum, *bot-on, *bot-vn, *bot-wyn, *bot-wn, *bot-un, s. & a. [From Fr. *bouton*=a bud, a button (*Littre*); Norm. Fr., Prov. & Sp. *boton*; Port. *botão*; Ital. *bottone*. Cf. Gael. (from Eng. *putan*; Wel. *botwm*. From Fr. *bouter*=to put, to thrust; Norm. Fr. *botier*=to put.)]

A. As substantive:

†1. A bud; *spec.*, a small bud.

"The canker galls the infants of the spring
Too oft before their *buttons* be disclosed."
Shakesp.: *Hamlet*, i. 3.

"Fair from its humble bed I reared this flow'r,
Suckled, and cheer'd with air, and sun, and show'r;
Soft on the paper ruff its leaves I spread,
Bright with the gilded *button* tipt its head."
Pope: *Dunciad*, iv. 408.

2. A knob or protuberance fastened to another body.

(1) *Gen.:* In the foregoing sense.

"We fastened to the marble certain wires, and a *button*."
Boyle.

(2) *Specially:*

(a) A knob on a cap. (*Lit. & fig.*)

"On fortune's cap we are not the very *button*."—*Shakesp.:* *Hamlet*, ii. 2.

(b) A catch to fasten the dress. It fits into a button-hole. (The most common sense of the word.) [II., 1.]

"*Botwn* (*botun*, P.) *Boto, fibula, nodulus*, DICT."—*Prompt. Parv.*

"Pray you, undo this *button*."

Shakesp.: *King Lear*, v. 3.

"One *button* of gold thread."—*Macaulay: Hist. Eng.* ch. v.

¶ *Not worth a button:* Not of any value.

"And once but taste of the Welse mutton,
Your Englis sheeps not worth a *button*."
Witt's Recreations, 1654.

†3. A name for the sea-urchin (*Echinus*).

II. Technically:

1. *Button-manufacture:* A small circular disk or knob of mother-of-pearl, horn, metal, or other material, with a shank or perforations through its center for attachment to an object, and made to fit into a hole formed in another one for its reception, the two fastening the objects together. Its chief use is to unite portions of a dress together. The ancient method of fastening dresses was by means of pins, brooches, buckles and tie-strings. Buttons of brass are found on dresses of the 16th century. Gilt buttons were first made in 1768, and those of papier mâché in 1778.

2. *Carpentry, &c.:*

(1) A small piece of wood or metal, swiveled by a screw through the middle, and used as a fastening for a door or gate.

2. A knob on a sliding bolt.

3. *Metallurgy:* A globule of pure metal formed in the cupel by fusion.

4. *Harness.* The *button of the reins or bridle:* A leathern ring with the reins passed through which runs along the length of the reins.

5. *Music:*

(1) *Of an organ:* A small round piece of leather which, when screwed on the tapped wire of a tracker, prevents it from jumping out of place. (*Stainer & Barrett*.)

(2) *Of an accordion:* One of the keys of the first-made accordions. (*Stainer & Barrett*.)

6. *Bot.:* [BACHELOR'S BUTTONS.] (See also the subjoined compounds.)

B. As adj.: (See the subjoined compounds.)

Compounds of obvious signification: *Button-maker, button-manufacturer.*

button-and-loop, *button and loop, s.

Naut.: A short piece of rope, having at one end a walnut knob crowned, and at the other end an eye. It is used as a becket to confine ropes in. (*Ogilvie*.)

button-blank, s. A circular blank cut out of any material and designed to be fabricated into a button.

button-brace, s. A tool for making buttons. The handle is like the common brace; the bit has cutters, but no router, and removes a circular blank or planchet of bone, pearl, wood, or whatever the material may be; an *annular bit* operating like a crown-saw or trephine.

button-bung, s. [From Eng. *button*, and *bung*=a cant term for a pocket or purse.] A stealer of buttons. (*An Age for Apes*.)

button-bush, *s.* The *Cephalanthus occidentalis*, a plant belonging to the order Cinchonaceæ (Cinchonads). It is a bushy shrub, with leaves either simply opposite or in whorls of three, and yellowish-white flowers in globular heads.

button-flower, *s.* The English name of *Gomphia*, a genus of plants belonging to the order Ochnaceæ (Ochnads). It has very beautiful flowers, with serrated, shining leaves and long spikes of brilliant yellow flowers. Two species have been introduced from Jamaica.

button-hole, *s.* [BUTTONHOLE.]

button-hook, *s.* A hook for grasping a button below the head, in order to draw it through the button-hole and fasten it.

button-key, *s.* A spring loop, the free ends of which, being passed through the shank of a button, expand so as to hold the loop in position and keep the button in place. A piece of coiled wire, making two or more turns, is also used for this purpose. It is called also a *button-fastener*.

button-lathe, *s.* A machine for cutting round disks for buttons. The material consists of plates of horn, bone, ivory, wood, mother-of-pearl, &c.

button-loom, *s.*

Weaving: A loom for weaving button-blank coverings.

button-mold, *s.* A disk of bone, wood, or metal, to be covered with fabric to form a button.

button-riveting, *a.* Riveting, or designed to rivet, a button.

Button-riveting machine: A tool for fastening buttons to garments by swaging down on the back of the washer the end of the rivet which forms the shank of the button.

button-tool, *s.* A tool for cutting out buttons or circular blanks for them.

button-tree, *s.*

Bot.: The English name of *Conocarpus*, a genus of plants belonging to the order Combretaceæ (Myrobalsans). The species are trees or shrubs from the tropics of both hemispheres.

button-weed, *s.*

Botany:

1. The English name of *Spermacoce*, a genus of plants belonging to the order Cinchonaceæ (Cinchonads). The species are inconspicuous weeds, growing in cultivated grounds in the East and West Indies, &c.

2. A common name for *Diodia*, also a Cinchonad.

button-wood, *s.*

1. The *Cephalanthus occidentalis*. [BUTTON-BUSH.]

2. A common name for the genus *Platanus*, containing the true plane-trees.

3. A colloquial name (used principally in Virginia, North Carolina, and Kentucky) given to any kind of hardwood used in the construction of tobacco "caddies."

büt'-tôn (1), *büt'-tēn, *v. t.* [From Eng. *button*, *s.* (q. v.) In Gael. (from Eng.?) *putanaich*; Fr. *boutonner*; Sp. *abotonar*; Port. *abotoar*; Ital. *abbottonare*.]

bü'-týl, *s.* [From Gr. *boutyron*, *boutyros*=buttered, and *kylē*=... matter as a principle of being.]

Chem.: An organic monad fatty radical, having the formula (C₄H₉)'; also called Quartyl, or Tetryl, from its containing four carbon atoms.

butyl alcohols, *s. pl.*

Chem.: C₄H₁₀O=quartyl alcohols, or tetryl alcohols. Four alcohols having this formula are known, two primary, one secondary, and one tertiary; they are metameric with ethylic ether. They are, (1) *Normal Butyl Alcohol*, or *Propyl Carbinol*,

C $\begin{cases} \text{CH}_2\text{CH}_2\text{CH}_3 \\ \text{OH} \end{cases}$ (2) *Isobutyl Alcohol*, or *Isopropyl Carbinol*, C $\begin{cases} \text{CH}(\text{CH}_3)_2 \\ \text{H}_2 \\ \text{OH} \end{cases}$ (3) *Secondary Butylic Alcohol*, or *Methyl-ethyl Carbinol*, C $\begin{cases} \text{CH}_3 \\ \text{C}_2\text{H}_5 \\ \text{H} \\ \text{OH} \end{cases}$

C₄H₉(OH)₄, and (4) *Tertiary Butyl Alcohol*, or *Trimethyl Carbinol*, C $\begin{cases} (\text{CH}_3)_3 \\ \text{OH} \end{cases}$

butyl aldehyde, *s.*

Chem.: CH₃.CH₂.CH₂.CO.H. It is obtained by distilling a mixture of butyrate and formate of calcium. It boils at 75°. By the action of iodine and phosphorus it is converted into normal butyl iodide, and by that of nascent hydrogen into normal butyl alcohol. Butyl, or butyric aldehyde, heated with alcoholic ammonia, forms dibutylamine, C₁₈H₁₇ON, which distilled yields paraconine.

butyl carbinol, *s.*

Chem.: [AMYL ALCOHOL.]

bü'-týl'-a-míde, *s.* [Eng., &c., *butyl*, and *amide* (q. v.).]

Chem.: C₄H₇O.NH₂ is a crystalline compound which melts at 115°, and boils at 216°.

bü'-týl'-a-míne, *s.* [Eng. *butyl*; *amine*.]

Chem.: C₄H₁₁N, or C₄H₉ $\begin{cases} \text{H} \\ \text{H} \end{cases}$ N. There are a Normal

Butylamine, CH₃.(CH₂)₃.NH₂; an Isobutylamine, CH(CH₃)₂.CH₂.NH₂; a Secondary Butylamine, H₃C >CH.NH₂; and a Tertiary Butylamine, or Katabutylamine, (CH₃)₃.C.NH₂.

bü'-týl'-ēne, *s.* [From Eng., &c., *butyl*, and suff. -ene.]

Chem.: The same as BUTENE (q. v.).

bü'-týr'-a-çě-oūs, *a.* [In Fr. *butyracé*. From Lat. *butyrum*=butter, and suff. -aceus.] Having the consistency of butter.

bü'-týr'-āte, *s.* [From Lat. *butyr(um)*; and Eng., &c., suff. -ate.] [BUTYRIC ACID.]

bü'-týr'-ēl'-líte, *s.* [From Lat. *butyrum*=butter, and dimin. suff. -ellum, with Eng. suff. -ite (Min.) (q. v.).]

Min.: An acid hydrocarbon, called also Bog-butter and Butyrite. Its consistency is like that of the substance after which it is named. It crystallizes in needles. It is soluble in alcohol or ether. Its color is white. Composition: Carbon, 75.0; hydrogen, 12.5; oxygen, 12.5=100. It is derived from the Irish peat bogs. (Dana.)

bü'-týr'-ic, *a.* [Lat. *butyr(um)*; and Eng. suff. -ic.] Connected with *butter* (q. v.).

butyric acid, *s.*

Chem.: C₄H₈O₂.

Normal Butyric Acid: C $\begin{cases} \text{CH}_2\text{CH}_2\text{CH}_3 \\ \text{O} \\ \text{OH} \end{cases}$

=propyl formic acid, or ethyl acetic acid. Obtained by the oxidation of normal butyl alcohol with chromic acid; also by the action of alkalis on normal propyl cyanide, or by the action of hydriodic acid on succinic acid; also by saponification of butter which contains tributyrin; and by the fermentation of sugar in contact with putrid cheese and chalk, calcium lactate is first formed which decomposes into butyrate, which is then distilled with sulphuric acid. Butyric acid is a colorless liquid, boiling at 164°. Its salts are called *butyrates*, and are soluble in water. By oxidation with nitric acid it yields succinic acid. *Isobutyric acid*, C₄H₈O₂+3O yields H₂O+C₂H₄

(CO.OH)₂ C $\begin{cases} \text{CH}(\text{CH}_3)_2 \\ \text{O} \\ \text{OH} \end{cases}$ =Isopropionic formic acid,

or dimethyl-acetic acid, obtained by oxidizing isobutyl alcohol, or by the action of alkalis on isopropyl cyanide. It is a colorless liquid, boiling at 154°. Both these acids form fragrant ethers with ethyl.

† Butyric acid has an odor of rancid butter. It is found in sweat, urine, and other fluids, and, as a neutral fat, in small quantities in milk. It is the chief product of the second stage of lactic fermentation. [DEXTROSE.]

butyric ether, *s.* The same as ETHYL BUTYRATE (q. v.).

bü'-týr'-íte, *s.* [From Lat. *butyr(um)*, and suff. -ite (Min.) (q. v.).]

Min.: The same as Butyrellite (q. v.).

bū-tŷr-ōne, s. [Lat. *butyrum*, and Eng., &c., ketone.]

Chem.: A ketone of the fatty series, also called *dipropyl ketone*, $\text{CO} \cdot \left\{ \begin{array}{l} \text{CH}_2\text{CH}_2\text{CH}_3 \\ \text{CH}_2\text{CH}_2\text{CH}_3 \end{array} \right.$. It boils at 144°, and, by the action of oxidizing agents, it is converted into butyric acid, $\text{CH}_3\text{CH}_2\text{CH}_2\text{CO.OH}$, and propionic acid, $\text{CH}_3\text{CH}_2\text{CO.OH}$. It can be obtained by the dry distillation of calcium butyrate.

bū-tŷr-ōus, a. [From Lat. *butyrum*=butter, and Eng. suff. -ous.] Having the properties of butter.

"Its oily red part is from the *butyrous* parts of chyle." *Floyer*.

būx-bāu'-mī-a, a. [Named after John Christian Buxbaum, a German who published a botanical work on Asia Minor in 1728.]

Bot.: A genus of mosses containing a solitary species (*Buxbaumia aphylla*), so like a fungus that it might be easily mistaken for one.

¶ *Buxbaumia* is by some made the type of an order, *Buxbaumiaceae*.

būx'-ē-ōus, a. [From Lat. *buxus*=(1) of boxwood; (2) of the color of boxwood; *buxus*=the box-tree.] Pertaining to the box-tree.

II. Zoölogy: The English name of the *Buteo*, a genus of birds, and specially of three species. These are—

1. The Turkey Buzzard (*Cathartes aura*). This genus is more a carrion vulture than a raptorial bird, like some of the other genera described below. They are natives of our Southern states, where they are very useful as scavengers, and are so much appreciated in this regard that in most of the states they are protected by law. In consequence they grow quite tame, and in some places may be considered almost a domesticated fowl. They are about the size of a common turkey, and the species gets its name from a distant resemblance between the two. They are of a dirty black color, and are from 25 to 36 inches long, having an immense span of wing (proportionate), being remarkable for their powerful and graceful flight. Its nest is a mere hollow in the ground with a rampart of loose dead branches around it. These birds may be seen by hundreds in one locality, hovering over and lighting upon the carcass of a dead animal. They are rarely found north of Pennsylvania.

2. The Brown Buzzard (*Buteo vulgaris*), called also the Glead, Glede, Glade, Kite, or Puttock. The male is deep-brown above, the margins of the feathers paler, the under parts yellowish-white with brown spots, the lace with brown and pale bands. The female is deep brown above and below, with whitish streaks on the throat, and spots of the same color on the breast. It feeds on small mammalia, birds, lizards, worms, and insects. It makes its nest in trees and ledges of rock.

3. The Rough-legged Buzzard (*Buteo lagopus*), which is feathered to the toes.

¶ *Bald-buzzard*: One of the names for the Fishing Osprey (*Pandion haliaetus*).

Capped-buzzard: [HONEY-BUZZARD.]

Honey-buzzard: The English name of a predatory bird, the *Pernis apivorus*, called also the Beehawk, or the Brown Beehawk. [HONEY-BUZZARD.]

Moor-buzzard: The Marsh-harrier (*Circus aeruginosus*).

*B. As adj.: Senseless, stupid.

"Those who thought no better of the living God, than of a buzzard idol."—*Milton: Eiconoclastes*, ch. i.

"Thus I reclaimed my buzzard love to fly

At what, and when, and how, and where I choose."

Donne: Poems, p. 47.

*büz'-zër, s. [Eng. *buzz*, and suffix -er.]

1. A whisperer.

"And wants not buzzers to infect his ear
With pestilent speeches of his father's death."

Shakesp.: Hamlet, iv. 5.

2. An electric device which gives an alarm or call produced by a rapid vibration of electric make-and-break mechanism, which is often magnified by inclosure in a resonance chamber, resembling a bell, but which is not struck or touched by the vibrating parts. Sometimes a square wooden box is used as a resonance chamber.

büz'-ziŋg, *pr. par.*, a. & s. [Buzz, v.]

A. & B. As *pres. par.* & *participial adjective*: (See the verb.)

"But here, where murder breathed her bloody steam;
And here, where buzzing nations choked the ways."

Byron: Child Harold, iv. 142.

C. As *subst.*: A buzz, whispering; talk in an undertone.

"A buzzing of a separation

Between the king and Katharine?"

Shakesp.: Henry VIII., ii. 1.

† **büz'-ziŋg-lŷ**, *adv.* [Eng. *buzzing*; -ly.] Buzzing in manner; in a low tone.

***bwnte**, s. [BOUNTY.] (*Scotch*.) (*Barbour: Bruce*, x. 294.)

***bwrg**, s. [BOROUGH, BURGH.]

bŷ, ***bī**, ***be**, *prep.*, *adv.* & *in compos.* [A. S. *be*, *bi*, *big*= (1) by, near to, to, at, in, upon, about, with; (2) of, from, about, touching, concerning; (3) for, because of, after, according to; (4) beside, out of (*Bosworth*); O. S. & O. Fries. *bi*, *be*; Dut. *bij*; Goth. & O. H. Ger. *bi*; (N. H.) Ger. *bei*; Dan. (in compos. only) *bi*.] [BE, *prep.*; BI.]

A. As *preposition*:

1. Of *place*:

(1) Near, not far from, beside, in proximity to, whether the person or thing referred to be as near another, be at rest or in motion.

"They passed *by* me."—*Shakesp.: Troilus*, iii. 3.

"There is a light cloud *by* the moon."

Byron: Siege of Corinth, 21.

(2) On, upon. (Used often in such phrases as *by sea*, *by land*, *by water*.) (*Bacon, Pope, Dryden, &c.*)

"I would have fought *by* land, where I was stronger."

Dryden.

¶ E. *by* N., according to the compass card, means east but slightly round to the north.

2. Of *time*:

(1) During, throughout the continuance of.

"... have ye offered to me slain beasts and sacrifices by the space of forty years in the wilderness?"—*Acts*, vii. 42.

(2) In.

"... that he could not do it *by day*, that he did it *by night*."—*Judges*, vi. 27.

¶ *By the morrow*: In the morning. (*Chaucer*.)

(3) Not later than, by the time of. (Followed by a substantive.)

"Hector, *by* the fifth hour of the sun,

Will with a trumpet, 'twixt our tents and Troy,

To-morrow morning call some knight to arms."

Shakesp.: Troilus & Cressida, ii. 1.

¶ Often used in the phrases *by this time*, *by that time*, *by to-morrow*, &c.

* (4) By the time that. (Followed by the clause of a sentence.)

"By thir words were said, his men were so enraged."—*Pittscottie*, p. 31.

(5) After, succeeding.

"Thus year *by* year they pass, and day *by* day."

Dryden.

3. Of *agency, conjoint agency, causation, and instrumentality*.

(1) Of *agency*: Noting the agent by whom or by which anything is done.

"By Hector slain, their faces to the sky,

All grim with gaping wounds our heroes lie."

Pope: Iliad, xix. 201-2.

(2) Of *conjoint agency or action*: By aid of, by conjoint action of.

"The sons of Abraham *by* Keturah."—*Gen.* xxv. (title.)

(3) Of *causation*: Noting the cause by which any effect is produced.

"Fissures near Serocarne, in Calabria, caused by the earthquake of 1783."—*Lyell: Prin. of Geol.*, ch. xxix.

(4) Of *instrumentality*: Noting the instrument or means by which anything is done.

"... and the brasen altar shall be for me to inquire *by*."—*2 Kings*, xvi. 15.

"Such a danger England and Holland might lawfully have averted by war."—*Macaulay: Hist. Eng.*, ch. xxiv.

¶ Of the *part in relation to the whole*:

"He tok his chylde *by* the hande."—*Isumbras*, 325.

¶ Regarding the distinction between *with* and *by*, Johnson says that *by* is commonly used after a verb neuter, while *with* would be put after an active one. Blair says both these particles express the connection between some instrument, or means of effecting an end, and the agent who employs it; but *with* expresses a more close and immediate connection, *by* a more remote one. We kill a man *with* a sword; he dies *by* violence. The criminal is bound *with* ropes by the executioner. In a passage of Dr. Robertson's *History of Scotland*, we are told that when one of the old kings was making an inquiry into the tenure by which his nobles held their lands, they started up and drew their swords; "By these," said they, "we acquired our lands, and *with* these we will defend them." (*Blair: Lectures on Rhetoric and Belles Lettres*, ed. 1817, vol. 1., p. 233.)

4. Of the *effect of causation*: Used to denote ground of judgment or comparison in reasoning back from effect to cause, in constructing an *à posteriori* argument, in reasoning from a fact or occurrence to any similar one.

"By this I know that thou favorest me."—*Psalms*, xli. 11.

5. Of *relation with respect to number or magnitude*:

(1) Measured by, estimated by.

"Bullion will sell *by* the ounce for six shillings and five pence unclipped money."—*Locke*.

(2) By the magnitude or number of.

"Meantime she stands provided of a Laius,

More young and vigorous too *by* twenty springs."

Dryden.

(3) Of *addition to*: Besides, over and above; in Scotch *foreby*. (*Scotch*.)

"... she [the ship] wasted all the woods in Fife, which was oak-wood, *by* all timber that was gotten out of Norrway."—*Pittscottie: Cron.*, p. 107.

(4) In succession to, after, following.

"The best for you is to re-examine the cause, and to try, it even point *by* point, argument *by* argument."—*Hooker*.

* (5) In the case of.

"Als it fales *bi* a tre."—*Psalms*, i. 3.

"So faeth it *by* a ryotous servaunt."

Chaucer: C. T., 4,406.

"... tuik him to be hir husband, *by* the adwyse and counsall of the lordis, for they knew nothing thair of a long time thairafter."—*Pittscottie: Cron.*, p. 284.

*12. With regard to, with reference to. (*Scotch*.)

"I speake not this *by* English courtiers."

George Gascoigne, 763.

*13. Against.

"I know nothing *by* [Rev. Ver. *against*] myself."—*1 Cor.* iv. 4.

B. As *adverb*:

1. Near; situated or temporarily resting in proximity to.

"... I also was standing *by*, and consenting unto his death ..."—*Acts* xxii. 20.

2. Near, passing near; moving past; past.

The galloping of horse; who was't came *by*?"

Shakesp.: Macbeth, iv. 1.

3. Aside, beside.

*4. Though a certain contingency take place, as "I carena *by*"=I don't care, though I agree to your proposal. (*Scotch*.) (*Jamieson*.)

C. In *special phrases*:

1. *By and by*, *by-and-by*, *adv.* & s.:

(1) As *adverb*:

* (a) Of *place*: Hard by. (*Chaucer*.)

* (b) Of *numbers, or of a plurality of persons or things*:

(i) From time to time.

"By and by. *Sigillatim*."—*Prompt. Parv.*

¶ "The Medulla renders *sigillatim* [(?) *singillatim* or *singulatim*], fro seel to seel." (*Harl. MS.*, 2,257.) (*Way*.) Probably *sigillatim* is a mistake for *singulatim*.

(ii) One by one, singly.

"Nature did yeeld thereto; and *by-and-by*

Bade Order call them all before her Majesty."

Spenser: F. Q., VII. vii. 27.

(c) Of *time*:

* (i) At once, as soon as possible, quick, immediately.

"I will that thou give me *by and by* in a charger the head of John the Baptist."—*Mark* vi. 25.

¶ In the Greek of this verse, *by and by* is *ex autē*=at the very point of time; at once; from *ex autē*. *tēs hōras*=from this very time. (*Trench*.)

bōl, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, ðhis; sin, aș; expect, Xenophon, exist. ph=f, -cian, -tian=șan. -tion, -sion=șăn; -țion, -șion=zhăn. -tious, -cious, -sious=șhș. -ble, -dle, &c.=bël, dël.

(ii) After a short time; after a time. As Trench well shows, the tendency of mankind to procrastination has altered the meaning of this phrase from "at once, immediately," to "after a time."

† (2) *As subst.*: The future.

"In the sweet *by* and *by*,
We shall meet on that beautiful shore."
Sankey: *Hymn* 9.

bý-wōrd, *bī-wōrd, s. [Eng. by; word.]

1. A common saying, a proverb. (Generally in a bad sense.)

"... a mere *byword* of contempt."—*Macaulay: Hist. Eng., ch. xvi.*

2. The object of such a saying, the individual whose speech or action has originated or given currency to the common saying.

"And now am I their song, yea, I am their *byword*."—*Job. xxx. 9.*

***byye, *bý-ýn, v. t. [BUY, v.]**

***bý-ýnge, pr. par. [BUYING.]**

bý-zānt, s. [BEZANT.]

Bý-zān'-tian, a. [Lat. &c., Byzanti(um)=the city (BYZANTINE), and suff. -an.] Pertaining to Byzantium.

Býz'-an-tine, Bý-zān'-tine, a. & s. [In Ger. byzantinisch; Fr. byzantin; Lat. Byzantinus. From Lat. Byzantium; Gr. Byzantion=Byzantium. From a probably mythic Byzas, a Megarian, said to have been its founder.]

A. As adj.: Pertaining to Byzantium, a Doric-Greek city on the European side of the Bosphorus, alleged to have arisen about B. C. 656. A new and more magnificent quarter, added by Constantine between A. D. 328 and 330, was called Constantinople, and occupied the site of part of the modern Turkish city.

¶ (1) **Byzantine architecture:**

Arch.: The style of architecture prevalent at Byzantium while it was the capital of the Greek empire in the East. The Byzantine churches are usually built in the form of a Greek cross, the center being covered by a large cupola, and the four arms or projections by semicupolas. The arches are generally semicircular, but sometimes segmental or horse-shoe shaped. The capitals, which taper downward, are square blocks, ornamented with foliage or with basket-work. The masonry is varied by horizontal and sometimes by vertical lines of bricks, besides which tiles, arranged so as to constitute the Greek letter *gamma*, or other figures, are often found on the exterior of the building. Interiorly, there is fine Mosaic ornamentation. The moldings, which have a bold projection, with the angles rounded off, are ornamented with foliage, and sometimes also with morocco or painting. A zigzag ornament with stiff foliage may be seen under the eaves and elsewhere. The apse is continually present. The Byzantine style of architecture has been divided into three periods—the first from the time of Constantine to that of Justinian in the middle of the sixth century; the second extends to the eleventh century; and the third to the conquest of Constantinople by the Turks in 1453. Few specimens of the first period remain; many of the second and third do so, the former being considered pure Byzantine, the latter Byzantine mingled with Italian, from the influence produced by Venice. [See *Gloss. of Architecture* (Oxford, 1845).]

(2) **Byzantine historians:**

Hist.: Numerous historians proper, and chroniclers who lived in the Byzantine empire between the fourth and fifteenth centuries A. D., and wrote its history. The most celebrated was Procopius, of Cæsarea.

B. As subst.: The same as *bezant, bizant, byzant*. [BEZANT.]

¶ If any obsolete words have been omitted in *by*, their modern spelling will probably be found at *bi, be, or bu*.

¶ A list of words in which *by* is a prefix has been given. The following more simple words have the modern spelling *bi*, at which they may be found: **Examples:** **bycche, *bycke* (=bitch), **byde, *bygs* (=big), **byke, *bykere, s.* (=bicker, s.), **bykker, *bykkir, *byker, *bykkyr, v.* (=bicker, v.); **byl, *bylle* (=bill), **bynde, s.* (=bind), **bynge, s.* (=bing (2), s.), **byrde* (=bird), **byrk* (=birk) (Scotch), **byrle* (=birl, 1), **byrthe, *byschop* (=bishop), **byschypryche* (=bishopric), **bysme* (=bism, Scotch), **bysquyte* (=biscuit), **bysshope* (=bishop), **bysshoperike* (=bishopric), **byte* (=bite), **bytt* (=bit, s.), **byttyr* (=bitter), **bytterly* (=bitterly), **byttynesne* (=bitterness), **byttyswete* (=bittersweet), **bytyne* (=bite), **bytynge* (=biting).

(2) A very few others are found with the spelling *be*. **Examples:** **bynggere* (=benger), **bytyle* (=beetle).

(3) Sometimes the old *by* becomes *bu* in a modern word. **Examples:** **byrdune, *byrdene* (=burden), **byryle* (=burial), **byrgyn, *byryyn* (=bury), **byryyd* (=buried), **byschelle, *bysshel* (=bushel), **bysy* (=busy), **bysily* (=busily), **bysinesse* (=business).

IN Anglo-Saxon was taken directly from the Latin alphabet, the source, it is believed, whence it has passed into various languages. In English words immediately derived from Anglo-Saxon, the *c* of the Anglo-Saxon often becomes *k* in English, as *A. S. cyng*=Eng. king; *A. S. cyn*=Eng. kin, or kindred. Sometimes the *A. S. c* becomes *q* in

English, as *A. S. cwen*=Eng. queen. At others it is changed into *ch*, as *A. S. cild*=Eng. child. (See *Bosworth: A. S. Dict.*) In Modern English *c* has two leading values. Before *i* and *e* it is sounded as *s* (examples: *certain, cincture*), and before *a, o* and *u* as *k* (examples: *cat, cost, curtly*). It is mute before *k*, as *trick*.

C. As an initial is used:

1. **In Chronol.:** Chiefly for Christ, as *B. C.*=(Before Christ).

¶ In the ambiguous letters *A. C.*, *C* may be (1) Christ, and *A. C.*=After Christ. Or it may be (2) Christum, and *A. C.*=ante-Christum, before Christ; or (3) Christi, and *A. C.*=Anno Christi, the year of Christ. See also *A* as an initial.

2. **In Music:** For counter-tenor, or contralto.

3. **In University degrees:** For Civil, as *D. C. L.*=Doctor of Civil Law.

C. As a symbol is used:

1. **In Numer.:** For 100. Thus *CII* is=102, *CC*=200, *CCC*=300, *CCCC*=400.

¶ *C* in this case is the initial of Lat. *centum*=100.

2. **In Chem.:** For the element carbon, of which it is also the initial letter.

3. **In Music:**

(1) For the first note of the diatonic scale, corresponding to *do* of the Italians.

(2) For the natural major mode, that in which no sharps or flats are employed.

(3) For common or four-crotchet time.

4. **In Biblical Criticism:** For the Ephraem manuscript of the Greek New Testament, *A* being the Alexandrian manuscript, *B* the Vatican manuscript, *D* the manuscript of Beza, and the Hebrew letter *Alaph*, the Sinaitic manuscript. [CODEX.]

C barré. [Fr.]

Music: The term for the time indicator. *C* with a dash through it. (*Stainer & Barrett.*)

C clef. [Fr.]

Music: The clef showing the position of middle *C*, in which are written the alto, tenor, and (in old music) other parts. (*Stainer & Barrett.*)

C dur. [Ger.]

Music: *C* major. (*Stainer & Barrett.*)

C moll. [Ger.]

Music: *C* minor.

cāb (1), s. [Abbreviation of cabriolet (q. v.).]

1. A covered public carriage having two or four wheels, and drawn by one horse. Cabs were first used for hire in London in 1823.

¶ In a *Hansom cab* the driver's seat is behind, not in front.

2. The covered part at the rear end of a locomotive which protects the engineer and fireman, and shields the levers, &c.

¶ Obvious compounds: *Cab-driver, cab-fare, cab-horse, cab-man, cab-stand, &c.*

cāb (2), s. [Heb. qab=a hollow or concave (vessel); from quabab=to render hollow.] A Jewish measure of capacity, mentioned only in 2 Kings vi. 25. The Rabbins make it $\frac{1}{2}$ of a *seah* or *satum*, and $\frac{1}{4}$ of an ephah. This would equal two and five-sixths pints of American corn measure.

cāb, v. t. [CAB (1), s.] To travel in a cab, as in the popular phrase, "Do you mean to cab it?"

***cab-age, s. [CABBAGE.]**

ca-bāl', s. [In Ger. cabala; Fr. cabale=a club or society. Cognate with Heb. cabala, and, perhaps, Eng. cavil (q. v.).]

1. A small number of persons closely united for some purpose, and not making their proceedings public. At first not necessarily in a bad sense.

"She often interposed her royal authority to break the *cabals* which were forming against her first ministers."—*Addison.*

2. A junto, a small number of persons in secret conclave carrying out their purposes in Church and State by intrigue and trickery. This bad sense was acquired in the time of Charles II. of England. (See the example.)

"During some years the word *cabal* was popularly used as synonymous with cabinet. But it happened by a whimsical coincidence that in 1671, the Cabinet consisted of five persons, the initial letters of whose names made up the word *cabal*, Clifford, Arlington, Buckingham, Ashley, and Lauderdale. These ministers were therefore emphatically called the *Cabal*; and they soon made the appellation so infamous that it has never since their time been used except as a term of reproach."—*Macaulay: Hist. Eng., ch. ii.*

"In dark *cabals* and nightly juntos met."

Thomson: Castle of Indolence, i. 54.

3. Intrigues, secret machinations.

"The numerous members of the House of Commons who were in town, having their time on their hands, formed *cabals*, and heated themselves and each other by murmuring at his partiality for the country of his birth."—*Macaulay: Hist. Eng., ch. xxiv.*

bōil, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, this; sin, as; expect, Xenophon, exist. ph = f. -cian, -tian = şan. -tion, -sion = şhün; -tion, -şion = zhün. -tious, -cious, -sious = şhüs. -ble, -dle, &c. = bel, del.

ca-bäl', v. i. [In Ger. *cabaliren*; Fr. *cabaler*.] To join a cabal, to intrigue secretly with others in the hope of gaining some coveted object or end.

"... that the men who held those offices were perpetually *caballing* against each other."—*Macaulay: Hist. Eng.*, ch. xx.

căb'-a-lă, căb'-bal-ah, kăb'-bal-ah, s. [In Ger. *cabala*; Fr. & Ital. *cabala*; all from Heb. *qabala* = (1) reception, (2) a doctrine derived from oral tradition; *gibbel*, peel of an obsolete root *qabal* = to receive, to accept a doctrine.]

1. *Historically*: A system of Jewish theosophy, bearing a certain similarity to Neo-Platonism. Its founders are considered by Dr. Ginsburg to have been Isaac the Blind and his disciples Ezra and Azariel of Zerona, who flourished between A. D. 1200 and 1230. It was designed to oppose the philosophical system of Maimonides. The cabala represented God, called *Ain Soph*, meaning Without End or Boundless, as being utterly inconceivable. He has become known, however, by means of ten intelligences, named Crown, Wisdom, Intelligence, Love, Justice, &c., whom he has brought into being, and by whom he created and now governs the world.

2. *Popularly*: An occult system of doctrine, something hopelessly mystical and unintelligible.

"Eager he read whatever tells
Of magic, cabala, and spells,
And every dark pursuit allied."

Scott: Lady of the Lake, iii. 6.

căb'-al-ism, căb'-bal-ism, s. [Eng. *cabal(a)*; -ism. In Ger. *cabbalism*.] The system of Jewish belief called cabala (q. v.).

"Vigorous impressions of spirit, ecstasies, pretty allegories, parables, *cabbalisms*."—*Spencer: On Prodigies*, p. 287.

căb'-al-ist, s. [Eng. *cabal(a)*; -ist. In Ger. *cabalist*; Fr. *cabaliste*; Ital. *cabalista*.]

1. One who professes acquaintance with and faith in the Jewish mystic doctrines of the Cabala.

"Not thine, immortal Neufgermain!
Cost studious *cabalists* more time."—*Swift*.

†2. A factor or broker in French commerce. (*Wharton*.)

căb'-a-lis'-tic, căb'-a-lis'-tick, căb'-a-lis'-i-cal, a. [Eng. *cabalist*; -ic, -ical. In Ger. *cabbalistisch*; Fr. *cabalistique*; Ital. *cabalistico*.]

1. Pertaining to the cabala.

2. Mystical, mysterious, occult; hard to be understood, like the cabala.

"The letters are *cabalistical*, and carry more in them than it is proper for the world to be acquainted with."—*Addison*.

"He taught him to repeat two *cabalistic* words, in pronouncing of which the whole secret consisted."—*Spectator*.

căb'-a-lis'-t-i-cal-ly, adv. [Eng. *cabalistical*; -ly.] After the manner of the cabala; in an occult manner; mystically, unintelligibly.

"Rabbi Elias—from the first verse of the first chapter of Genesis, where the letter aleph is six times found, *cabalistically* concludes that the world shall endure just six thousand years; aleph in computation standing for a thousand."—*Sir T. Herbert: Travels*, p. 123.

***căb'-a-lizec, căb'-bal-ize, v. i.** [Eng. *cabal(a)*; -ize.] To speak, write, or believe like a cabalist.

"Here St. John seems to *cabalize*, as in several places of the Apocalypse, that is, to speak in the language of the learned of the Jews."—*More: Myst. of Godliness*, i. 8.

†căb'-ăl-lēr, s. [Eng. *cabal*; -er. In Fr. *cabaleur*.] One who joins in a cabal; one who secretly intrigues with others to gain a certain end.

"Cautious in the field, he shunn'd the sword,
A close *caballer*, and tongue-valiant lord."

Dryden.

†căb'-al-line, a. [From Lat. *caballinus* = pertaining to a horse; *caballus* = a pack-horse, a nag, a pony; Gr. *kaballēs* = a nag. Cf. also Sp. *caballo*; Ital. *cavallo*; Fr. *cheval* = a horse; *cavale* = a mare; Fr. *capall*; Rus. *kobila*, *kobiela* = a mare.] Pertaining to a horse.

Caballine Aloes: Horse Aloes (*Aloe caballina*). [ALOE.]

†căb'-ăl-lîng, pres. par. & a. [CABAL, v.] Joining a cabal, intriguing secretly with others.

"What those *caballing* captains may design
I must prevent, by being first in action."

Dryden.

***căb'-ăl-list, s.** [Eng. *cabal*; -ist.] One who cabals, a caballer, intriguer.

"We now see plainly that the *caballists* of this business have, with great prudence, reserved themselves until due preparations should be made for their design."—*King Charles I's Answer to Propositions by both Houses of Parliament*, ed. 1642, p. 11.

***ca-ban, *ca-bane, s.** [CABIN.]

căb'-a-rét, s. [Fr.] A public-house, an ale-house.

"... passing by some *cabaret* or tennis-court where his comrades were drinking or playing . . ."—*Bramhall against Hobbes*.

***ca'-barr, s.** [GABERT.] (Scotch.) A lighter. (*Spalding*.)

ca-bă's-sou, s. [French.] A French name for a mammal, the Giant Tatoo, or Armadillo (*Dasypus gigantus*). It is the largest of the Armadillos, being sometimes three feet long without the tail.

cab-back, s. [KEBBUCK.] (Scotch.)

căb'-bage (1), *căb'-age (age as ig), *căb'-bysshe, *căb'-bidge, s. [O. Fr. *choux cabus* = a cabbage (*Cotgrave*); O. Fr. *cabus, cabuce* = round-headed, great-headed. Indirectly from Lat. *caput* = head; Ital. *capuccio* = a little head; *latugga-capuccia* = cabbage-lettuce. (*Skeat*.)]

1. *Gardening*: Specially those garden varieties of the *Brassica oleracea* which have plain leaves and "hearts," but sometimes employed in a more general sense for the genus *Brassica* itself.

"Good worts! good cabbage."—*Shakesp.: Merry Wives of Windsor*, i. 1.

"The leaves are large, fleshy, and of a glaucous color; the flowers consist of four leaves, which are succeeded by long taper pods, containing several round acrid seeds. The species are, *cabbage*, *Savoy cabbage*, *Broccoli*, *The cauliflower*. The *musk cabbage*. Branching tree cabbage from the sea-coast. *Colewort*, *Perennial Alpine colewort*, *Perfoliated wild cabbage*, &c."—*Miller*.

2. *Ordinary Language*:

(1) In the same sense as 1.

(2) The huge terminal bud of some palm trees.

"Their 'cabbage' (that of the trees of *Saguerus saccharifer*) is moreover eatable, like that of the West Indian Cabbage-palm (*Areca oleracea*), whose huge terminal bud is known by this name."—*Lindley: Veg. King*, (ed. 1853), 137.

† *Brazil Cabbage*: An aroid plant, *Caladium sagittifolium*.

Dog's cabbage: A plant—the *Thelygonum Cynocrambe*—which belongs either to the *Chenopodiaceæ* or the *Urticaceæ*. Though subacid and somewhat purgative it is occasionally used as a potherb.

St. Patrick's Cabbage: One of the names of the *Saxifraga umbrosa*, the London-pride, or "None-so-pretty," called St. Patrick's, because it is a native of Ireland.

cabbage-rose, s. The *Rosa centifolia*.

"... one of which afforded a most accurate if not picturesque view of Margate, while the other glowed with a huge wreath of cabbage-roses and jonquils."—*Disraeli: Henrietta Temple*, bk. vi., ch. x.

cabbage-tree, s.

1. The English name for the palm-genus *Areca*, and specially for the *A. oleracea*, the cabbage-palm of the West Indies. It is so called because the bud at the top of its stem is like a cabbage, and the inner leaves which form this bud are eaten like the vegetable now mentioned, though the removal of its bud for the sake of these leaves is the destruction of the magnificent tree.

2. A garden name for *Kleinia nervifolia*, a composite plant.

Australian cabbage-tree: A palm-tree—the *Corypha australis*. Its leaves are made into hats, baskets, &c.

Bastard cabbage-tree: *Andira inermis*, a leguminous plant of the sub-order *Cæsalpinieæ*.

cabbage-wood, s.

1. *Eriodendron anfractuosum*, a tree belonging to the *Bombacæ*, a family of the *Sterculiaceæ*, or *Sterculiads*.

2. The wood of the cabbage-tree.

"Cabbage-wood . . . is sometimes used in ornamental furniture; but does not answer very well, as the ends of the fibers are too hard and the medullary part is too soft for holding glue. The surface is, also, very difficult to polish, and cannot be preserved without varnish. The trunk, after the center part is rotted out, forms a durable waterpipe."—*Waterston: Cyclopædia of Commerce*.

cabbage-worm, s.

Entom.: The caterpillar, or larva of several species of moths or butterflies, especially that of the *Pontia*, or *Pieris brassicæ*, which attacks cabbages. [CABBAGE-BUTTERFLY.]

căb'-bage (age as ig) (2), s. [Fr. *cabas* = a basket.] Cant word for the shreds and clippings made by tailors.

"For as tailors preserve their *cabbage*,
So squires take care of bag and baggage."

Second Part of Hudibras (spurious), p. 56: 1663.

căb'-bage (age as ig) (1), căb'-bidge, v. i. [From the substantive.] To form a head like that of the cabbage.

"*Cabusser*, to *cabidge*; to grow to a head, or grow round and close together as a cabbage."—*Cotgrave*.

"To make lettuce *cabbage*, they transplant it, taking care during the great heats to water it; otherwise, instead of poming, it runs to seed."—*Rees: Cyclopædia*.

căb'-bage (age as ig) (2), v. t. [Fr. *cabasser* = to put into a basket; *cabas* = a basket.]

A cant term among tailors: To steal a portion of the cloth used when a tailor is cutting out some article of dress.

"Your tailor, instead of shreds, *cabbages* whole yards of cloth."—*Arbutnot*.

căb'-baged (age as ig), pa. par. & a. [CABBAGE, v.]

căb'-bag-ing (ag as ig), pr. par. & s. [CABBAGE, v.]

A. *As pr. par.*: (See the verb.)

B. *As subst.*: The act or process of forming a head like that of a cabbage.

"*Cabbaging*, among gardeners, is sometimes used to denote the knitting and gathering of certain potherbs into round bunched heads; in which case it amounts to the same with what Evelyn calls poming, pommer, *q. d.* appling or growing applewise."—*Rees: Cyclopædia*.

căb'-bă-lă, s. [CABALA.]

căb'-ble, v. t. [Contracted from *scabble* (q. v.) (?).] To break up into pieces. [CABBING.]

căb'-bled, pa. par. & a. [CABBLE, v.]

căb'-blēr, s. [CABBLE.] One who breaks up the iron in the process of cabbling.

căb'-blîng, pr. par. & s. [CABBLE, v.]

A. *As pr. par.*: (See the verb.)

B. *As substantive*:

Metal.: A colloquial term among metallurgists, also called "scabbling." "Finery," that is the cast or pig iron, after it has been subjected to the influence of the refinery, is smelted with charcoal; it is then worked up with iron bars into a large ball of 2-2½ cwt., which is afterward hammered into a flat oval from 2-4 inches thick; this is allowed to cool, and then the process of *cabbling* commences, which is simply breaking up this flat iron into small pieces. These pieces are again heated almost to fusion, hammered, and drawn out into *bar-iron*.

ca-bē'-cā, s. [Port. *cabeca*.]

Fabrics: The finest kinds of India silk, as *dis*, distinguished from the *bariga*, or inferior kind; *cabesse*. (*Simmonds*.)

***ca-bel, s.** [CABLE.]

"Caban, lytyle howse,"—*Prompt. Parv.*
"Crope into a cabane,"—*P. Plowman*, 1,739.

"... on the south side of the ford were a few mud cabins and a single house built of more solid materials,"—*Macaulay. Hist. Eng.*, ch. xvi.

2. Any temporary shelter or dwelling-place.

"Some of green boughs their slender cabins frame,
Some lodged were Tortosa's streets about,"—*Fairfax.*

- *3. A little room. [CABINET.]

"So long in secret cabin there he held
Her captive to his sensual desire,"—*Spenser.*

4. A compartment or small room in a ship.

"Give thanks you have lived so long, and make yourself ready in your cabin for the mischance of the hour, if it so hap,"—*Shakesp.: Tempest*, 1. 1.

"Men may not expect the use of many cabins, and safety at once, in the sea service,"—*Raleigh.*

cabin-boy, s. A boy whose office it is to attend in the cabin or elsewhere on the officers of a ship.

"... two weatherbeaten old seamen who had risen from being cabin-boys to be admirals,"—*Macaulay. Hist. Eng.*, ch. xv.

***cabin-mate, s.** One who shares the same cabin with another.

"His cabin-mate, I'll assure ye."
Beaum. & Fl.: Sea-voyage.

***căb'-în, v. i. & t.** [From *cabin, s.*]

I. Intrans.: To live in a cabin, or in some similarly humble dwelling.

"I'll make you feed on berries and on roots,
And feed on curds and whey, and suck the goat,
And cabin in a cave,"—*Shakesp.: Titus Andron.*, iv. 2.

II. Trans.: To confine closely, as in a cabin or cell. (*Lit. & fig.*)

"They feel themselves in a state of thralldom, they imagine that their souls are cooped and cabined in, unless they have some man or some body of men dependent on their mercy,"—*Burke: Speech at Bristol* in 1780.

căb'-îned, pa. par. & a. [CABIN, v.]

†**A. As pa. par.:** Confined closely, as in a cabin or small cell.

"I'm cabin'd, cribb'd, confin'd, bound in,
To saucy doubts and fears,"—*Shakesp.: Macbeth*, iii. 4.

"Though from our birth the faculty divine
Is chain'd and tortured—cabin'd, cribb'd, confined,
And bred in darkness,"—*Byron: Childe Harold*, iv. 127.

B. As adjective:

1. Containing or furnished with cabins.
*2. Pertaining to a cabin.

"The nice morn, on the Indian steep,
From her cabin'd loophole peep,"—*Milton.*

căb'-î-nět, s. [In Ger. *cabinet*. From Fr. *cabinet*, dimin. of *cabane*=a hut; Sp. *gabinete*; Ital. *gabinetto*.]

I. Ordinary Language:

1. Literally:

- * (1) A little hut or cottage.

"Hearken awhile, from thy greene cabinet,
The rurall song of carefull Colinet,"—*Spenser: Shepherd's Calendar*, xii.

"Their groves he feld; their gardins did deface;
Their arbors spoyle; their Cabinets suppress,"—*Ibid.: F. Q.*, II. xii. 83.

- * (2) A closet, a small room.

"At both corners of the farther side, let there be two delicate or rich cabinets, daintily paved, richly hanged, glazed with crystalline glass, and a rich cupola in the midst, and all other elegancy that may be thought on,"—*Bacon.*

- * (3) A private room, used for consultations, &c.

"You began in the cabinet what you afterward practiced in the camp,"—*Dryden.*

(4) A piece of furniture, containing drawers or compartments in which to keep curiosities and other articles of value.

"In vain the workman shew'd his wit,
With rings and hinges counterfeit,
To make it seem, in this disguise,
A cabinet to vulgar eyes,"—*Swift.*

(5) A receptacle in a printing office in which cases for job type are arranged after the manner of sliding drawers.

2. Figuratively:

- * (1) Any place of rest or shelter.

"Lo! here the gentle lark, weary of rest,
From his moist cabinet mounts up on high,"—*Shakesp.: Venus and Adonis.*

(2) Any thing in which articles of value are preserved.

"Who sees a soul in such a body set,
Might love the treasure for the cabinet,"—*Ben Jonson.*

"Young ladies and young gentlewomen too
Do no small kindness to my Pilgrim show:
Their cabinets, their bosoms, and their hearts,
My Pilgrim has; 'cause he to them imparts
His pretty riddles in such wholesome strains,"—*Bunyan: P. P.*, pt. ii. Introd.

II. Tech.: A kind of deliberative committee of the executive. It consists of the principal members of the Government. The cabinet of the President of the United States is composed of the heads of the several administrative departments of the Government. These heads of departments are termed members of the cabinet. They are: 1. The Secretary of State. 2. The Secretary of the Treasury. 3. The Secretary of War. 4. The Secretary of the Navy. 5. The Secretary of the Interior. 6. The Postmaster-General. 7. The Attorney-General. 8. The Secretary of Agriculture. 9. The Secretary of Commerce and Labor.

"The cabinet council, shortly termed the cabinet, forms only part of the ministry or administration. . . . Its [the privy council's] duties of advising the crown and conducting the government of the country, are almost exclusively performed by the principal ministers of state, who form another section of it called the cabinet council. This is so termed on account of its being originally composed of such members of the privy council as the king placed most trust in, and conferred with, apart from others, in his cabinet, or private room. Speaking constitutionally, however, there is no difference between a cabinet and a privy councillor,"—*A. Fonblanque, Jun.: How we are Governed*, let. 6.

"Few things in our history are more curious than the origin and growth of the power now possessed by the cabinet. From an early period the kings of England had been assisted by a privy council, to which the law assigned many important functions and duties. During several centuries this body deliberated on the gravest and most delicate affairs of state. But by degrees its character changed. It became too large for dispatch and secrecy. The rank of privy councillor was often bestowed as an honorary distinction on persons to whom nothing was confided, and whose opinion was never asked. The sovereign, on the most important occasions, resorted for advice to a small knot of leading ministers. The advantages and disadvantages of this course were early pointed out by Bacon, with his usual judgment and sagacity; but it was not till after the Restoration that the interior council began to attract general notice. During many years old-fashioned politicians continued to regard the cabinet as an unconstitutional and dangerous board,"—*Macaulay: Hist. Eng.*, ch. ii.

cabinet-edition, s. An edition of a small neat size.

"He is, indeed, a walking cabinet-edition of Goethe, in all the externalities of manner and style; elevating neatness almost into sublimity; witching prettiness that it looks like beauty,"—*Foreign Quarterly Review*, No. 1.

cabinet-file, s.

Cabinet-making and Joinery: A smooth, single-cut file, used in wood-working.

cabinet-maker, s. One whose trade it is to make cabinets or receptacles for curiosities and valuables. Also applied more widely to a maker of household furniture in general.

"The root of an old white thorn will make very fine boxes and combs, so that they would be of great use for the cabinet-makers, as well as the turners and others,"—*Mortimer.*

cabinet-making, a. & s.

A. As adjective: Pertaining to the making of household furniture.

B. As substantive:

- *1. The making of cabinets in a political sense.

"Excepting for cabinet-making, I doubt
For that delicate purpose, they're rather worn out,"—*Moore: Twopenny Post-bag, Sale of the Tools.*

2. The trade or business of a maker of household furniture.

cabinet-meeting, s. A meeting of the Cabinet for consultation.

"A Cabinet-meeting was hastily called yesterday morning, presumably for the purpose of considering the Hawaiian matter,"—*New York World.*

cabinet-organ, s.

Music: A superior class and size of reed organ.

cabinet-picture, s. Properly small valuable pictures or paintings from the old masters, on copper, panel, and canvas; such as, from their size and value, would be preserved in cabinets. Any picture or painting of a small size. Also applied to photographs of a size larger than *cartes-de-visite*, and generally to anything of value of a small, neat size, fitted for preservation in a cabinet. (*Lit. & fig.*)

***cabinet-secret, s.** A close secret.

"And if all that will not serve our turn, but we must press into his cabinet-secrets, invade the book of life, and oversee, and divulge to all men *abscondita Domini Dei nostri*, then are God's mercies unworthily repaid by us, and those indulgences which were to bestow civility upon the world, have only taught us to be more rude,"—*Hammond: Works*, vol. iv., p. 629.

căb'-î-net, v. t. [CABINET, s.] To inclose as in a cabinet or casket.

"This is the frame of most men's spirits in the world; to adore the casket, and contemn the jewel that is cabined in it,"—*Hewyt: Sermon*, p. 87.

căb'-în-ing, pr. par. & a. [CABIN, v.]

cab'-îr, kab'-âr, keb-bre, s. [From Wel. *ceibre*, *ceibren*=a rafter; Ir. *ceabar*=a coupling; Gael. *cabar*=a pole, lath.] (*Scotch.*)

1. A rafter.

2. The transverse beams in a kiln on which grain is laid to be dried.

†**Că-bî-rē'-an, †Căb-îr'-î-an, a. & s.** [CABIRI.]

A. As adjective: Pertaining to the Cabiri or their worship.

B. As substantive: One of the Cabiri.

Că-bî-rî, s. pl. [Gr. *kabeiroi*. Strabo says that the name came from Mt. Cabeirus, in Berezynthia.] **Ethnic. & Class. Myth.:** Certain Pagan deities of whom very little is known. They were supposed to have considerable influence over storms of the sea. They were specially worshiped in Samothrace, Lemnos, Imbros, and the Troad.

Că-bî-rîc, a. [CABIRI.] Of or pertaining to the Cabiri or their worship.

***Că-bî-rît'-îc, a.** [CABIRI.] The same as CABIRIC.

că'-ble, *ca'-bel, *ca'-belle, *ca'-bulle, *ca'-byl, s. & a. [O. Fr. *cabel*, *caable*, *chaable*; Fr. *câble*; Low Lat. *caplum*; Lat. *capio*=to take hold of; M. Gr. *kaplion*; Dut., Dan., Sw. & Ger. *kabel*.]

A. As substantive:

I. Nautical, in Telegraphy, &c.:

1. A strong, thick rope, exceeding ten inches in circumference, originally only made of hemp, but now also of iron or copper wire, or most commonly of iron links. A rope less than ten inches in circumference is called a *hawser*.

† Hemp is laid up right-handed into yarns. Yarns are laid up left-handed into strands. Three strands are laid up right-handed into a hawser. Three hawsers laid up left-handed make a cable. (*Knights.*)

(1) The rope or chain to which a ship's anchor is attached. [CHAIN-CABLE.]

"Cable, or cabulle (caby, or schyp roop, A. P.). *Curcula*,"—*Prompt. Parv.*

"Cachen vp the crossayl, cables thay fasten,"—*Allit. Poems* (ed. Morris); *Patience*, 102.

(2) The wire rope used for the support of suspension bridges.

(3) The wire rope used for submarine telegraphs. 2. A nautical measure of distance=120 fathoms, or 720 feet, by which the distances of ships in a fleet are frequently estimated. This term is often misunderstood. In all marine charts a cable is deemed 607.56 feet, or one-tenth of a sea mile. In rope-making the cable varies from 100 to 115 fathoms; cablet, 120 fathoms; hawser-laid, 130 fathoms, as determined by the Admiralty in 1830. (*Smyth.*) According to Ure, a cable's length is 100 to 140 fathoms in the merchant service; in the Royal Navy four cables are employed, each of 100 fathoms, two cables being attached end to end.

II. Mechanical Engineering: The subterranean wire rope used for the purpose of moving the kind of street cars commonly called cable cars or grip cars.

"Another very serious phase of the cable system is the fact that by far the greater per cent. of the initial power is required to simply haul the cable without cars attached, or when the cable is a little worn it is easily overloaded,"—*Chicago Herald*, January 1, 1894.

III. In Architecture:

1. A wreathed or torus convex molding made in the form of a rope. [CABLE-MOLDING.]

2. A molding representing a cable or spiral scroll.

† Cable is used in many nautical phrases, e. g.:

1. A shot of cable: Two cables spliced together.

2. To bend the cable: To make it fast to the anchor.

3 To bit the cable: To fasten it round the bits. [Brit.]

4. To drag the cable: Said of a ship when the cable fails to hold it securely, owing to roughness of weather.

5. To fleet the cable: To allow it to surge back on the whelps of the capstan or windlass, as the cable climbs on to the larger part of the cone.

6. To keckle the cable: [To serve the cable.] [CACKLE (2), v.]

7. To pay out the cable: To let it run out.

Cable-molding.

8. *To pay the cable cheap*: To let it run out fast; to hand it out apace.

9. *To plait the cable*: To serve it.

10. *To serve the cable*: To bind it round with ropes, canvas, &c., so as to prevent it from being galled in the hawser.

11. *To slip the cable*: To let it run out, and leave it, when there is no time to weigh anchor.

12. *To splice the cable*: To join the ends of two cables, or of a broken cable, by working the strands into one another. In the case of iron cables the splice is effected by means of shackles.

13. *To veer the cable*: To let more out.

14. *To worm the cable*: To fill the spiral crevices between the lays with strands.

B. *As adjective*: (See the compounds.)

† Compounds of obvious signification: *Cable-length*, *cable-maker*.

cable-bends, *s. pl.* Two small ropes for lashing the end of a hempen cable to its own part, to secure the clinch by which it is fastened to the anchoring. (*Smyth*.)

cable-bit, *s.* [BIT.]

cable-bitted, *a.* So bitted as to enable the cable to be nipped or rendered with ease.

cable-buoy, *s.* A buoy or cask used to keep a rope cable to prevent it from being cut in rocky anchorages. Also used to support the end of a broken cable, to assist in recovering it.

cable-cane, *s.* A species of Palm, *Calamus rudentum*, a native of the East Indies, Cochinchina, &c.

cable-car, *s.* A car used for intramural transportation in our larger cities, the motive power of which is a wire cable, forming an endless belt, that is dragged through a subterranean channel, over pulleys, by powerful stationary engines at some point along the line, generally where two loops of the rope meet. The cable, by reason of its great weight and liability to accident, is divided into sections (each consisting of an endless belt), especially if the line of direction of the road be changed to an angle equal to or greater than 90°.

"*Cable-cars* and horse cars dart this way and that way, to the imminent danger of life and limb, to say nothing of impeding all sorts of traffic incident to so large and active a city as Chicago is to-day."—*Chicago Herald*, January 1, 1894.

cable-gram, *s.* [CABLEGRAM.]

cable-grip, *s.* A grip or clamp acting on the cable rope, and used for controlling the movement of cable-cars.

cable-gripper, *s.*

Naut.: A lever compressor over the cable-well, by which the cable is stopped from running out.

***cable-hatband**, *s.* Twisted gold or silver cord worn as a hatband.

"... more cable till he had as much as my *cable-hatband* to fence him."—*Marston: Ant. & Mellida*, ii. 1.

cable-hook, *s.*

Nautical:

1. A hook for attachment to the messenger by which the cable is hauled in on a man-of-war, or other ship having a large number of hands, without having recourse to the capstan. It may also be attached to a hawser, under-running the cable.

2. A hook by which a cable is handled. Each seaman has a hook in lighting-up the cable or packing in tiers.

cable-laid, *a.* Twisted in the manner of a rope or cable, in which each strand is a hawser-laid rope.

cable-molding, *s.* [CABLE, A. 2.]

cable-nipper, *s.*

Naut.: A device serving to bind the messenger to the cable, and composed of a number of rope-yarns or small stuff marled together. (*Knight*.)

***cable-rope**, *s.*

Naut.: A thick, strong rope, a cable.

cable-shackle, *s.*

Naut.: A D-shaped ring or clevis, by which one length of cable is connected to another, or, upon occasion, the cable connected to an object such as the anchor-ring. (*Knight*.)

cable-sheet, **sheet-cable**, *s.* The spare bower anchor of a ship.

cable-stage, *s.* The place in the hold or cable-tier for coiling ropes and hawsers.

cable-stopper, *s.*

Naut.: A device to stop the playing-out of the cable.

cable-tier, *s.*

Nautical:

1. That part of the deck where the cables are stowed.

2. The coils of a cable.

cable-tire, *s.*

1. *Naut.*: The coils of a cable.

2. *Mech.*: Any large rope used in raising weights, as in pulleys, cranes, etc.

3. *Arch.*: A molding of a convex form at the back of the flutes, representing a rope or a staff laid in a flute.

4. *Milit.*: The large rope used in dragging guns.

cable-well, *s.*

Naut.: The part of the ship where the cable is coiled away.

cā'-ble, *v. t. & i.* [CABLE, *s.*]

I. *Transitive*:

1. *Naut.*: To fasten or secure with a cable.

2. *Arch.*: To fill the flutes of columns with cable-molding.

3. *Tele.*: Now very frequently used, especially in this country, in the sense of to send a message by the submarine telegraph cable.

"Had Messrs. . . . cabled the refusal of the order, or even written by return mail, there could have been no possibility of any misunderstanding."—*London Daily News*, Sept. 19, 1873.

II. *Intrans.*: To send a message by the submarine telegraph cable.

"Mr. . . . cables to-day that large numbers of English proxies will be revoked and new ones given in his favor."—*London Daily Telegraph*, Dec. 31, 1880.

cā'-bled (*Eng.*), **cā'-beld** (*Scotch*), *a.* [CABLE, *s.*]

*1. *Naut.*: Fastened or secured to a cable.

"Cautious approaching, in Myrina's port
Cast out the cabled stone upon the strand."

Dyer: Fleece, ii.

2. *Arch.*: Filled with cable-molding, as the flutes of columns.

3. *Tele.* *Of a message*: Sent by the submarine telegraph cable.

4. *Her.*: The same as CABLEE (*q. v.*).

"Cabled, in Heraldry, is applied to a cross formed of the two ends of a ship's cable; sometimes also to a cross covered over with rounds of rope; more properly called a cross corded."—*Rees: Cyclopædia*.

cabled-columns, *s.*

Arch.: Columns, the flutes of which are filled with cable-molding.

cā-blē', *a.* [Fr. *câble*.] [CABLED, 4.]

Her.: Applied to a cross in coat-armor, composed of two cable ends.

cā'-ble-grām, *s.* [A coined word, formed on the supposed analogy of *anagram*, *chronogram*, &c. From *Eng. cable*, and *Gr. gramma*=a writing, message, *graphō*=to write.] A message sent by the submarine telegraph cable.

"A cablegram from New York states that the steamer *Scandinavia* collided with the *Thiorva*."—*London Standard*, April 12, 1880.

cā'-blēt, *s.* [Eng. *cabl(e)* and dimin. suff. *-et*; or Fr. *câlot*.] A little cable; one less than ten inches in circumference; a tow-rope.

"*Cablet*, in sea-language, denotes any cable-laid rope under nine inches in circumference."—*Rees: Cyclopædia*.

cā'-bling, *s.* [CABLE, *v.*]

Architecture:

1. The act of filling up the flutes of columns with cable-molding.

2. The same as cable-molding.

***cāb'-lish**, *s.* [O. Fr. *chablis*.] Brushwood, branches blown down by the wind.

cāb'-man, *s.* [Eng. *cab*, and *man*.] A driver of a cab.

ca-bōb, *v. t.* [CABOB, *s.*] To roast, as a cabob.

ca-bōb', *s.* [Pers. *cobbob*=roasted meat.]

1. A small piece of meat roasted on a skewer. (So called in Turkey and Persia.)

2. A leg of mutton stuffed with white herrings and sweet herbs. (*Sir T. Herbert*.)

ca-bō'che (1), *s.* [From Fr. *cabas*=a wicker-basket, an old and paltry carriage.] Things pertaining to a chariot.

"*Caboche*. *Currulia*."—*Prompt. Parv.*

***ca-bō'che** (2), *s.* [Fr. *caboche*=a large head.] The Bullhead, or Miller's-thumb; also applied to the tadpole.

"*Nomina piscium* . . . Hic (sic) caput, a *caboche*. Hic capito, a bulhede."—*Nominate* (? 15th century); *Vocabularies in Library of National Antiquities*. (*Wright*.)

ca-bō'ched, **ca-bos'hed**, **ca-boss'ed**, *a.* [Fr. *caboche*=a large head; O. Fr. *cap*=head; Lat. *caput*.]

Heraldry: Beasts' heads, borne full-faced, and without any part of the neck visible.

"*Caboched*, *caboshed* or *cabossed* . . . is where the head of a beast is cut off behind the ears by a section parallel to the face; or by a perpendicular section, in contradistinction to *couped*, which is done by a horizontal line; besides that it is further from the ears than *cabossing*. The head, in this case, is placed full-faced, or *affrontée*, so that no part of the neck can be visible. This bearing is by some called *Trunked*."—*Rees: Cyclopædia*.

ca-bō'-chōn, *s.* [Fr. *cabocho*, from *caboche*=head.] A method of cutting precious stones.

cāb'-ō-cle, *s.* [A Brazilian word.]

Min.: A doubtful mineral, of a pale or dark brick-red color, resembling red jasper. Dana calls it "Hydrous Phosphate of Alumina and Lime." It is found in rolled pebbles with the diamond sand of Bahia.

cāb'-ōk, *s.* [KEBBUCK.]

ca-bom'-ba, *s.* [Etymology unknown.]

Bot.: A genus of aquatic plants, with shield-like floating leaves, and finely-cut submerged ones, like the *Ranunculus aquatilis* and its allies. It grows in this country, and is the type of the order Cabombaceæ.

ca-bom-bā'-cē-æ, *s. pl.* [Named from the typical genus *cabomba* (*q. v.*), fem. pl. adj. suff. *-aceæ*.]

Bot.: An order of water-plants, placed by Lindley in his 31st or Nymphal alliance. They have 3-4 sepals, 3-4 petals, 6-13 stamens, and 2-18 carpels, distinct from each other, with fine seeds. Only two genera are known, *Cabomba* and *Hydrapeltis*. The species are three, and are found in this country and in Australia. They are sometimes called Water-shields.

ca-bōo'se, **cam-bōo'se**, *s.* [Dut. *kombuis*=a cook's room. The origin is doubtful. Dan. *kabys*; Sw. *kabya*; L. Ger. *kabuse*, *kabuse*=a little room or hut. Allied to Wel. *cab*=hut, and Eng. *booth*; Ger. *büse*; Low Lat. *busa*. (*Mahn*.)]

1. *Nautical*:

(1) The cook's house, or galley, on the deck of a ship.

(2) A box covering the chimney in a ship.

2. *Rail. Engineering*: A car attached to the rear of a freight train fitted up for the accommodation of the conductor, brakeman, and chance passengers.

Zoöl.: A species of eel-pout, about two feet long.

ca'-bōtz, *s.* [An Abyssinian word.] The Cusso or Kouso. [BRAYERA.]

ca-brēr'-ite, *s.* [From the Sierra Cabrera, in Spain.]

Min.: A mineral of a pearly luster, and translucent, apple-green color, resulting from the alteration of arsenids of nickel and cobalt. Composition: Arsenic acid, 42.37; protoxide of nickel, 20.01; oxide of cobalt, 4.06; magnesia, 9.29; water, 25.80. It is found in the Sierra Cabrera, in Spain. (*Dana*.)

†cāb-rī-ō'le, **†cāb-rī-ō-le't** (*et as ā*), *s.* [Fr. *cabriolet*, dim. of *cabriole*=a caper, a leap, from the fancied friskiness and lightness of the carriage; Ital. *capriola*=a caper, *caprio*=a wild goat. (*Skeat*.)] A covered carriage, drawn by two horses; now contracted into *cab* (*q. v.*).

"In those days men drove gigs as they since have driven stanhopes, tillburys, dennets, and *cabriolets*, and I rather piqued myself upon my 'turn-out.'"—*Theodore Hook: Gilbert Gurney*, vol. ii., ch. i.

cāb'-rit, *s.* [Sp. *cabrito*, a kid.] The American antelope, or pronghorn (*Antilocapra americana*). [PRONGHORN ANTELOPE.]

cāb'-üre, *s.* [Brazilian name.]

Zoöl.: The name of a small Brazilian bird of the owl kind, very beautiful and very easily tamed. It is of a brown color, variegated with white, and is feathered down to its toes.

cā'-būrns, *s. pl.* [Probably from *cable*.]

Naut.: Small lines made of spun yarn, to bind cables.

"*Caburns*, in sea-language, denote small lines made of spun yarn, wherewith to bind cables, seize tackles, and the like."—*Rees: Cyclopædia*.

ca-cā'-lī-ā, *s.* [Gr. *kakalia*=coltsfoot.]

Bot.: A genus of composite plants of the sub-order Tubulifloræ, and the family Senecioneæ. They are perennials, and have some of them fleshy stems and dingy leaves. Those of *C. procumbens* are eaten by the Chinese, and those of *C. ficoides* by the natives of Cape Colony.

ca-cā'-ō, *s.* [A Mexican word, *cacauatl*, adopted from the Spanish.]

1. The specific name of the *Theobroma cacao*, the tree from the seeds of which chocolate is prepared. It is a native of tropical America.

fāte, fāt, fāre, amidst, whāt, fāl, father; wē, wēt, hēre, camel, hēr, thēre; pīne, pīt, sīre, sīr, marine; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rūle, fūll; trȳ, Sȳrian. æ, œ = ē; ey = ā. qu = kw.

2. The seeds of the *Theobroma cacao* mentioned above. They are called also Cocoa (q. v.).

¶ *Wild cacao*: A plant, *Herrania purpurea*.

cacao-mill, s.

Grinding: A mill for grinding the nut of the *Theobroma cacao*, to reduce it to the condition of flake cacao. It differs from chocolate in being ground with a portion of its hull, instead of being carefully hulled before grinding. It is mixed in the hopper with flour, sugar, &c., and passed through a number of steel mills resembling paint-mills, by which the nut is reduced and the ingredients intimately incorporated therewith by means of friction, heat, and the oil evolved from the nut.

cacao-nuts, s. The fruit of the Cacao-tree, from which chocolate is made.

cacao-tree, s. [CACAO.]

*cāc-a-tōr-ŷ, a. [Lat. *caco*=to go to stool.] Attended with diarrhoea.

cacatory-fever, s.

Med.: An intermittent form of fever, accompanied with looseness of the bowels, and sometimes with gripes.

ca-cāt-u-a, s. [Imitated from the note of the birds.] [COCKATOO.]

Ornith.: A genus of birds, the typical one of the sub-family *Cacatuinae*. *Cacatua galerita* is the Great Sulphur-crested Cockatoo, and *C. sulphurea*, the Small Sulphur-crested Cockatoo.

cāc-a-tu'-in-æ, s. pl. [From *cacatua* (q. v.), and fem. pl. adj. suff. -inæ.]

Ornith.: A sub-family of Psittacidae (Parrots), containing the Cockatoos. The head is furnished with an erectile crest, and the tail is broad and even. They are found in the Eastern Archipelago and Australia.

*cācche, v. t. & i. [CATCH.]

cāce, *cāis, s. [In Fr. *cas*, from Lat. *casus*=chance.] Chance, accident. (Scotch.)

¶ In *cace*: By chance.

cāch'-a-lōt, s. [Fr. *cachalot*; Dut. *kazilot*; Len. *kaskelot*; Sw. *kaselot*; Ger. *kaschelot*.]

1. A cetacean of the family *Balenidae*. It is the *Physeter macrocephalus*, called also the Sperm or Spermaceti Whale. The male is from forty-six to sixty, or even seventy feet long; the female from thirty to thirty-five. It is black, becoming whitish below. The cachalots feed chiefly on squids or cuttle-fishes. They are gregarious, and go in what the fishermen call schools, sometimes with as many as 500 or 600 individuals. There are two kinds—female schools and schools of males not fully grown. With each female school are from one to three large bulls, or, as the whalers call them, schoolmasters. The cachalot inhabits the Northern seas, but straggles through a great part of the ocean.

2. The Mexican Sperm-whale (*Catodon Colneti*), found in the North Pacific, the South Seas, and the Equatorial Ocean.

3. The South Sea Sperm-whale, found, as the name imports, in the Southern Ocean.

căc-tă'-gē-æ, s. pl. [Named from the *Cactus* (q. v.).]

Bot.: Indian Figs, an order of exogenous plants, placed by Lindley under his fifty-second alliance, the Cactules. The sepals and petals are numerous and confounded with each other. The stamens are indefinite, the ovary fleshy, inferior, one-celled; the fruit succulent, one-celled, many seeded. The flowers are sessile, and usually last only one day or night. The leaves are generally wanting, but an experienced observer might mistake for them the usually angular foliaceous stems. The Cactaceæ are natives of this country, whence they have been imported into the warmer parts of the Eastern hemisphere. About 800 are known. The fruit of some species is refreshing and agreeable, that of others insipid. The juice of *Mammillaria* is slightly sickly, being at the same time sweet and insipid. The fruit of *Opuntia* stains red the urine of those who eat it. Many of the Cactaceæ are of very abnormal forms.

căc-tă'-gē-ous, a. [Cactaceæ.] Pertaining to the Cactaceæ.

căc-tă'-lēš, s. pl. [From Lat. *cactus* (q. v.), and pl. adj. suff. *-ales*.] Lindley's fifty-second alliance of plants. It stands between Myrtales and Grossales, and belongs to the fourth sub-class, or Epigynous Exogens.

căc-tūs, s. [Lat. *cactus*; Gr. *kaktos*=a prickly plant.]

Bot.: An old and extensive genus of Linnæus, in four sections: (1) The Echinomelocacts; (2 & 3) Cerei of two kinds; and (4) Opuntiae. It is now broken up into a number of genera. It is still popularly used as the designation of nearly the whole of the Cactaceæ, to which order, moreover, it has given its name. Cacti are sometimes called Melon Thistles.

Hedgehog cactus: A designation of the genus *Echinocactus*.

Leaf cactus: The Epiphyllum.

Melon thistle cactus: The Melocactus.

Nipple cactus: The Mammillaria.

† The Hindoos compare Europeans in the East to the species of *Cactus* (*Opuntia Dillenii*), which they know best.

The plant, though now seen all over India, undoubtedly came at first from a foreign and a distant country. It grows very extensively in the western and southwestern part of the United States and all over tropical America, usually on arid lands.

Indian Cactus.

Once rooted in a place, it spreads so widely abroad that it is difficult to get it out again, and it is believed to impoverish the land of which it takes possession. It is of so abnormal a type that none but itself can be its parallel. An unpleasant feature about it is that from whatever side you approach it, you are met in all directions by fixed bayonets.

Were heard—sonorous cadences! whereby
To his belief, the monitor express'd."
Wordsworth: Excursion, bk. iv.

(b) *Of animals*:

"Around him feeds his many-bleating flock,
Of various cadence."
Thomson: Seasons; Spring, 833.

(3) The rhythm or flow of language, a kind of blank verse or poetic prose.

"Bookes, songes, and ditties,
In rime, or else in cadence."
Chaucer: House of Fame, 627.

"The cadency of one line must be a rule to that of the next; as the sound of the former must slide gently into that which follows."—*Dryden*.

(4) The modulation of any tone or sound.

"How soft the music of those village bells,
Falling at intervals upon the ear
In cadence sweet, now dying all away,
Now pealing loud again, and louder still."
Cowper: Task, vi. 8.

2. *Mil.*: A regularity and uniformity of pace in marching.

"Elizabeth kept time to every cadence with look and finger."—*Scott: Kenilworth*, ch. xvii.

3. *Music*:

(1) *Spec.*: A close, the device which in music answers the use of stops in language. The effect is produced by the particular manner in which certain chords succeed one another, the order being generally such as to produce suspense or expectation first, and then to gratify it by a chord that is more satisfying to the ear. They are commonly divided into three kinds: the *perfect cadence* (again subdivided into *authentic* and *plagal*), the *imperfect cadence*, and the *interrupted cadence*. (*Grove.*)

(2) *Gen.*: The closing phrase of a musical composition.

"A strain of music closed the tale,
A low, monotonous funeral wail,
That with its cadence, wild and sweet,
Made the long Saga more complete."
Longfellow: Tales of a Wayside Inn, Interlude.

4. *Her.*: The various steps in the descent of a family; the distinction of houses.

†5. *Horsemanship*: (For definition see example.)

"Cadence is an equal measure or proportion which a horse observes in all his motions, when he is thoroughly managed."—*Farrier's Dictionary*.

***cā'-denced**, *a.* [**CADENCE**, *s.*]

1. In cadence, regulated, in measure.

"A certain measured, cadenced step, commonly called a dancing step, which keeps time with, and as it were beats the measure of, the music which accompanies and directs it, is the essential characteristic which distinguishes a dance from every other sort of motion."—*A. Smith: On the Imitative Arts*.

2. Sung or written in cadence.

"These parting numbers, cadenc'd by my grief."
Philips: To Lord Carteret.

cā'-den-čy, *s.* [**CADENCE.**]

***ca'-dene**, *s.* [Fr. *cadène*; Sp. *cadena*; O. Fr. *cadène*; Fr. *chaîne*; Lat. *catena*=a chain, from the chain-like appearance of the warp.] An inferior description of Turkey carpet.

cā'-dent, *a. & s.* [Lat. *cadens*, accus. *cadentem*, pr. par. of *cado*=to fall.]

A. As adjective:

***I. Ordinary Language**: Falling, dropping.

"With cadent tears fret channels in her cheeks."
Shakesp.: King Lear, i. 4.

II. Technically:

*1. *Music*: In cadence; regulated, in measure.

2. *Astrol.*: Applied to a planet when it is in a sign opposite to that of its exaltation.

3. *Geol.*: The tenth of the fifteen series of beds into which Professor Rogers subdivides the palæozoic strata of the Appalachian chain. It corresponds in age to the Lower Middle Devonian rocks of the British Isles.

B. As substantive:

Geol.: The series of rocks described under A., II. 3.

ca'-dēn'-za, *s.* [Ital. *cadenza*.] [**CADENCE.**]

Music: A flourish of indefinite form introduced upon a bass note immediately preceding a close.

cad-ět, *s.* [Fr. *cadet*=a younger brother; Prov. Fr. *capdet*, from Lat. *capitulum*=a little head; the eldest son being called the *caput*, or head of the family.]

*1. *Ord. Lang.*:

(1) A younger brother, the youngest son.

"Joseph was the youngest of the twelve, and David the eleventh son, and the cadet of Jesse."—*Browne: Vulgar Errors*.

(2) The younger of two brothers in a gentleman's family.

"Walter Buck was a cadet of the house of Flanders."—*Sir G. Buck: Hist. of Richard III.*, p. 68.

2. *Mil.*: Formerly a volunteer who served in the army, with or without pay, with the chance of gaining a commission. Now applied to students at military or naval academies, colleges, and schools.

3. *Spec. U. S. Military and Naval Cadets*: The United States Military Academy, at West Point, was founded by act of March 16, 1802, constituting the corps of engineers of the army, a military academy with fifty students or cadets, who were to receive instruction under the senior engineer officer as superintendent. Later acts established professorships of mathematics, engineering, philosophy, etc., and made the academy a military body, subject to the rules and articles of war. In 1815, a permanent superintendent was appointed, and a year later an annual board of visitors was provided for, to be named by the president, the speaker of the house, and the president of the senate. In 1843 the present system of the appointment of cadets was instituted, which assigns one cadet to each congressional district and territory in the union, to be named by the representative in congress for the time being, and ten appointments at large, specially conferred by the president of the United States. The number of students is thus limited to 312. A large proportion of those appointed fail to pass the examination, and many others to complete the course, the proportion being stated at fully one-half hitherto. The course of instruction requires four years, and is largely mathematical and professional. The discipline is very strict, even more so than in the army, and the enforcement of penalties for offenses is inflexible rather than severe. Appointees to the military academy must be between 17 and 22 years of age, at least five feet in height, and free from infirmity, and able to pass a careful examination in various branches of knowledge. Each cadet admitted must bind himself to serve the United States eight years from the time of admission to the academy. The pay of cadets is \$540 per year, with no allowance for rations.

The United States Naval Academy was opened October 10, 1845, and the credit of its foundation is attributed to Hon. George Bancroft, then secretary of the navy under President Polk. The course of instruction, designed to train midshipmen for the navy, at first occupied five years, of which three were passed at sea. Various changes have been made in the course of instruction, which was made seven years in 1850, four years in 1851, and six years

(the last two of which are spent at sea) March 3, 1873, where it now remains. The Naval Academy, first located at Annapolis, Maryland, was removed to Newport, R. I., in May, 1861, but re-established at Annapolis in September, 1865, where it now is, occupying lands formerly known as Fort Severn. The academy is under the direct care and supervision of the navy department. There are to be allowed in the academy one naval cadet for every member or delegate to the House of Representatives, appointed at his nomination, one for the District of Columbia, and ten appointed at large by the president. The number of appointments which can be made is limited by law to twenty-five each year, named by the secretary of the navy after competitive examinations, the cadets being from 14 to 18 years of age. The successful candidates become students of the academy, and receive the pay of naval cadets—\$500 per annum. Cadets who graduate are appointed in the order of merit to the lower grades of the line and engineer corps of the navy and of the marine corps as fast as vacancies occur. But such appointments cannot be made in excess of vacancies, and graduates who receive no appointments get an honorable discharge with one year's sea pay. The course of instruction is thorough, involving a close pursuit of mathematics, steam engineering, physics, mechanics, seamanship, ordnance, history, law, etc.

ca-dět'-ship, *s.* [Eng. *cadet*; -ship.] The rank or position of a cadet.

cād'-ew (ew as ū) (1), *s.* [A corruption of *cad-dis*.] A caddis-worm.

"A prosperity of which every Scotchman, from the peer to the *cadie*, would partake."—*Macaulay: Hist. Eng.*, ch. xxiv.

ca-dil'-lăc, ca-dil-leck, s. [From Cadillac, a town in the Department of the Gironde, in France.] A kind of pear. (*Wright.*)

căd'-jii, s. [A corruption of a native word.] [*CASHEW.*]

Bot.: The native name for the *Anacardium occidentale*, a tree, a native of South America. It is commonly called *CASHEW-TREE* (q. v.).

cadjii gum, s. A gum obtained from the *Anacardium occidentale*.

căd'-lôck, s. [Etymology doubtful.]

Bot.: Three plants—(1) *Sinapis arvensis*, (2) *S. nigra*, (3) *Brassica Napus*. No. 1 is sometimes called Rough Cadlock, and No. 3 Smooth Cadlock.

Căd'-mê-an, Căd-mă'-an, a. [Lat. *Cadmeus*=pertaining to Cadmus, the mythical founder of Thebes.] Of or belonging to Thebes, Theban.

"In Theban games the noblest trophy bore, . . .

And singly vanquished the *Cadmean* race."

Pope: Homer's Iliad, xxiii. 788.

căd'-mî-um, s. [From Lat. *cadmia* (*Pliny*); Gr. *kadmia*, *kadmia*=calamine, an ore of zinc.]

Chem.: A diatomic metallic element, discovered in 1818; symbol, Cd; atomic weight, 112; specific gravity, 8.6; melting point, 315°, boils at 860°. Cadmium is a white, ductile, malleable metal. It scarcely tarnishes in the air; it burns when heated in the air, forming a brown oxide, CdO. It dissolves readily in nitric acid; it decomposes water at red heat. Its vapor density is 3.9 compared with air. Cadmium is found in some zinc ores; when these are distilled it rises in vapor before the zinc does so. It also occurs in the form of sulphide in greenockite. Cadmium is easily separated from zinc by passing HS₂ into their solution in HCl; the cadmium is precipitated as yellow sulphide, CdS. Cadmium can be separated from copper in analysis by dissolving their sulphides in nitric acid and adding ammonia in excess, filtering off oxides of other metals; then potassium cyanide is added till the precipitate first formed redissolves, then H₂S gas is passed through the liquid, from which it throws down the cadmium as sulphide.

cadmium-blende, s.

Min.: The same as GREENOCKITE (q. v.). Formerly called also Sulphuret of Cadmium.

cadmium-yellow, s. A pigment, consisting of cadmium sulphide. [*CADMIUM.*]

căd'-ouk, căd'-douck, s. [Fr. *caduc*; Lat. *caducus*=falling; *cado*=to fall.] A casualty; forfeited or escheated property.

"As their service to his Majestie was faithfull and yall, so his Majestie was liberrall and bountifull, in advancing them to titles of honor; as also in bestowing on them *cadouks* and casualties, to enrich them more than others," &c.—*Monro: Exped.*, pt. ii., p. 123.

***cad-owe, s.** [*CADDOW.*]

"Moreover this bird [the crow] only feedeth her young *cadowes* for a good while after they are able to flie."—*Holland: Plinie*, bk. x., ch. 12.

căd'-ranş, s. [In Fr. *cadran*, from Lat. *quadrans*, as pr. par.=agreeing, as s.= $\frac{1}{4}$ of an as; $\frac{1}{4}$ of anything.]

Lapidary Work: An instrument for measuring the angles in cutting and polishing gems. It is sometimes called an *angulometer*. The gem is cemented on to the end of a rod clamped between jaws, and a small graduated disk enables the angle to be marked.

***ca'-duc, a.** [*CADUKE.*]

***căd'-û-căr-ŷ, a.** [Lat. *caducus*=falling; *cado*=to fall.]

1. *Old law*: Relating to escheat, forfeiture, default, or confiscation.

"Being *ultimus hæres*, and therefore taking by descent, in a kind of *caducary* succession, . . ."—*Blackstone: Comment.*, vol. ii., ch. 15.

2. The same as CADUCOUS (q. v.).

ca-dû'-cê-an, a. [*CADUCEUS.*] Pertaining to the caduceus of Mercury.

ca-dû'-cê-ûs, s. [Lat. *caduceus*, or *caduceum.*]

1. *Gen.*: A herald's staff.

2. *Spec.*: The winged staff of Mercury, borne by him officially as messenger of the "gods."

". . . and Mercury, lose all the serpentine craft of thy *caduceus*, if ye take not that little less than little wit from them that they have!"—*Shakesp.: Troil. & Cres.*, ii. 3.

ca-dû'-cî-brăń'-chî-âte, a. [From Lat. *caducus*=inclined to fall easily, falling, and *branchia*=the gills of a fish.] [*BRANCHIA.*]

Zoöl.: Having a want of permanency in their gills, having gills which fall off before maturity is reached. Example, frogs. It is opposed to *perenni-branchiate*.

"Some of these are perennibranchiate, retaining the branchiæ through life; others lose the branchiæ, becoming thus *caducibranchiate*."—*Nicolson: Palæont.*, ii. 175.

ca-dû'-cî-tŷ, s. [Fr. *caducité*; from Low Lat. *caducitas*; from Lat. *caducus*=falling; *cado*=to fall.] Feebleness, weakness.

"An heterogeneous jumble of youth and *caducity*."—*Lord Chesterfield.*

ca-dû'-coûs, a. [Lat. *caducus*=falling; *cado*=to fall.]

Bot.: Dropping off; falling off quickly, or before the time, as the calyx of a poppy or the gills of a tadpole.

***ca-dû'-ke (Eng.), *ca-duc (Scotch), a.** [Fr. *caduc*; from Lat. *caducus*=falling; *cado*=to fall.] Failing, perishable.

"All their happiness was but *caduke* and unlasting."—*Hicks: Lucian.*

cad'-ŷ, a. [*CADGY.*] (*Scotch.*)

çæ'-çal, s. [From Lat. *cæcum* (q. v.), and Eng. suff. -al.] Terminating blindly, i. e., in a closed end; pertaining to the cæcum.

çæ'-çî-ăs, s. [Gr. *kaikias*=the northeast wind.] A northeast wind.

"Now from the north,
Boreas' and Cæcias, and Argestes loud,
And Thracias, rend the woods, and seas upturn."
Milton: P. L., x. 669.

çæ'-çî-gên'-î-æ, s. pl. [Lat. *cæcus*=blind; *genitus*=brought forth, pa. par. of *gigno*=to beget.]

Entom.: A sub-tribe of insects, order Hemiptera. The species are generally bright-scarlet with black spots.

***çæ'-çîl'-î-a, çæ'-çîl'-î-a, s.** [Lat. *cæcilia*=a kind of lizard, probably the blindworm (q. v.); *cæcus*=blind.]

1. *Zoöl.*: A genus of serpent-shaped amphibians, the type of the family Cæciliadæ (q. v.).

2. *Ichthy.*: A name used by some authors for the fish more usually known by the name of the Acus. It is common in the Mediterranean, and is called by the Venetian fishermen *Biscia*, that is, Viper-fish.

çæ'-çîl'-î-a-dæ, s. pl. [From Mod. Lat. *cæcilia* (q. v.).]

Zoölology: Cæcilians, serpent-shaped amphibians. They belong to the order Gymnophiona. The young have internal branchiæ, while the adults breathe by lungs. Of the genera, Cæcilia is found in India, Africa and South America; Siphonops and Rhinatrema in America; and Epicrion in Asia. None have been found fossil.

çæ'-çîl'-î-anş, s. pl. [From Lat. *cæcilia*; Eng. pl. suff. -ans.]

Zoöl.: The English name for the family Cæciliadæ (q. v.).

***çæ'-çît-ăs, s.** [Lat. *cæcitas*=blindness, from *cæcus*=blind.]

Med.: Blindness.

çæ'-cûm, s. [Neut. of Lat. *cæcus*=blind, invisible.]

1. *Anat.*: The beginning of the great gut, commonly called the blind-gut, because it is perforated at one end only; it is the first of the three portions into which the intestines are divided.

2. *Zoöl. & Palæont.*: A genus of mollusks, by some considered to be the type of the family Cæcidæ, but generally placed under the family Turritellidæ. The species are recent or tertiary, commencing in the Eocene period.

çæ'-lûm, s. [Lat. *cælum*=a chisel or burin of a sculptor or engraver, a graver; from *cædo*=to fall, . . . to cut.]

Cælum sculptoris: The sculptor's tool.

Astron.: One of Lacaille's constellations.

çæ'-nănth'-î-um, s. [From Lat. *cæna* or *cœna*=dinner, supper; and *anthium*=Mod. Lat. dimin. from Gr. *anθος*=a blossom, a flower.]

Bot.: A kind of inflorescence seen in the fig-trees (*Ficus*) in Dorstenia and Ambora. (*R. Brown.*)

ca'-er, in compos. [Wel. =a wall, a fort, a city.] A town, a city, as Caerleon.

çæ'-rê-ba, s. [Etymology doubtful. Agassiz calls it "a barbarous word."]

Ornith.: A genus of birds, the typical one of the sub-family Cærebinae (q. v.).

çær-ê-bî'-næ, s. pl. [From Mod. Lat. *cæreba* (q. v.), and fem. pl. suff. -inæ.]

Ornith.: A sub-family of the Promeropidæ, or Sun-birds.

***çær'-ule, *çer'-ule, a.** [From Lat. *cæruleus*=azure blue.] Azure blue. [*CERULEAN.*]

"Whose *cærule* streame, rombling in Pible stone."
Spenser: Virgil's Gnat.

***çær-u-lës'-çënt, çer-u-lës'-çënt, a.** [Formed by analogy as if from Lat. *cærulesco*, from *cæruleus*=azure blue; and Eng. suff. -escent.] Becoming more or less sky-blue.

çæ-săl-pîn'-î-a, s. [Named after Andreas Cæsalpinus, chief physician to Pope Clement VIII., in the latter part of the sixteenth century.]

Bot.: The typical genus of the leguminous sub-order Cæsalpinieæ (q. v.). They are trees or shrubs, with showy yellow flowers, ten stamina, and bipinnatifid leaves. About fifty species are known. The intensely astringent *Cæsalpinia coriaria* has legumes which contain so much tannin that they are valuable for tanning purposes. They are known in commerce as Dividivi, Libidivi, or Libidibi, and come from the West Indies and South America. *C. crista*, also West Indian, *C. echinata*, from Brazil, and other species, produce valuable red, orange, and peach blossom dyes. The wood of the latter, given in powder, is tonic. *C. brasiliensis*, which, however, is not from Brazil, and is now called *Peltophorum Linnæi*, is said to produce the Brazil-wood of commerce. [*BRAZIL-WOOD.*] *C. Sappan*, from India, furnishes the Sappan-wood. [*BUKKUM-WOOD, SAPPAN-WOOD.*] An oil is expressed from the seeds of *C. oleosperma* and other species. The roots of *C. Nuga* and *C. Moringa* are diuretic; the seeds of *C. Bonducella* are intensely bitter. Several Chinese species bear soap-pods, that is, pods which may be used as a substitute for soap. (*Lindley: Treas. of Bot., &c.*)

çæ-săl-pîn'-î-ê-æ, s. pl. [From Mod. Lat. *Cæsalpinia* (q. v.); pl. fem. adjectival suff. -æ.]

Bot.: One of the great sub-orders into which the Leguminosæ are divided. They have an irregular flower, but not at all so much so as the Papilionaceæ. The petals are spreading, the stamens adhere to the calyx. They are mostly ten in number, though in rare cases less than five. They have purgative qualities. They constitute a notable and attractive feature of the vegetation in tropical countries. Lindley divides them into eight tribes: (1) Leptolobieæ, (2) Eucæsalpinieæ, (3) Cassieæ, (4) Swartsieæ, (5) Amherstieæ, (6) Bauhinieæ, (7) Cynometreæ, (8) Dimorphandree.

çæ-săr'-î-ân (1), a. [From Lat. *Cæsarianus*, *Cæsarius*=pertaining to Cæsar, i. e., spec., to Caius Julius Cæsar.] Pertaining to any of the Cæsars, and especially to the great Caius Julius Cæsar.

çæ'-săr'-î-an (2), çê-săr'-î-an, a. [From Lat. *cæsura*=a cutting, an incision; or possibly the same as (1); see def.] Involving the act of cutting, specially in the operation described under the compound terms.

cæsarían operation, s.

Surgery and Midwifery: The most serious operation in midwifery, and only resorted to in extreme cases, to save life; as, for example, when a woman fully pregnant dies suddenly, by accident or otherwise, the child being still alive *in utero*; or when, by reason of deformity, the birth cannot take place naturally or with the aid of ordinary obstetrical instruments, *per naturales vias*. The operation consists in making an incision in the abdomen and removing the child with the contents of the womb *en masse*, and then sewing up the wound thus made in the usual way. As might be expected, the danger is very great to the living mother. Certain cases, however, have survived the operation—some have even gone through a repetition of it, and the number of successful cases is happily increasing, owing to the improvements in modern surgery, particularly in the knowledge of the correct use of antiseptics, as the great danger lies in septicæmia ensuing. The Cæsarían operation is of very ancient origin, being known to the Greeks and called by them *hysterotomokê*. The Romans also practiced it, and it was considered by them a fortunate circumstance to be so born. According to Pliny, Scipio Africanus was delivered in this way (*Auspiciatus enecta matre nascuntur sicut Scipio Africanus prior natus*). This author, with others, also asserts that the name of Cæson, afterward Cæsar, was first given to those thus born (*Quia cæso matris utero in lucem prodeunt*). It is more probably, however, from Lat. *cæsaries*=a head of hair.

çæ'-sî-a, s. [In honor of Frederico Cæsio, an Italian naturalist.]

Bot.: A genus of lilaceous plants, belonging to the order Anthericeæ.

çæ'-sî-ô, s. [Named after Frederico Cæsio.]

Ichthyol.: A genus of acanthopterygious fusiform fishes, having the dorsal and anal spines much larger than the others, and their base thickly covered with small scales. Family, Chaetodonidæ.

çæ'-sî-ouş, a. [Lat. *cæsius*=bluish-gray. (Used generally of the eyes.)]

Bot.: Bluish-gray, lavender color. Akin to glaucous, but greener. (*Lindley.*)

fâte, fât, färe, amidst, whât, fáll, father; wê, wêt, hère, camêl, hêr, thêre; pine, pît, sîre, sîr, marine; gô, pôt, or, wôre, wôlf, wôrk, whô, sôn; müte, cûb, cûre, unite, cûr, rûle, fûll; trÿ, Sÿrian. æ, œ = ê; ey = â. qu = kw.

çæ'-sī-ūm, s. [From Lat. *cæsius* = bluish-gray, sky-colored.]

Chem.: A monad metallic element; symbol, Cs., at. weight 133. It was discovered in 1860 by spectrum analysis in mineral waters and in several minerals, as mica, felspar, &c., also in the ashes of plants. It is separated by the greater insolubility of the double chloride with platinum. The hydrate is a strong base. Cæsium carbonate can be separated from rubidium carbonate by its solubility in absolute alcohol. Cæsium gives characteristic blue lines in its spectrum.

çæs-pīt'-ōse, a. [From Mod. Lat. *cæspitosus*; Class. Lat. *cæspes* (genit. *cæspitis*) = a turf, a sod.]

Bot.: Growing in tufts.

çæs-pīt'-ū-lōse, a. [From Lat. *cæspes* (genit. *cæspitis*) = a turf, a sod; dimin. suffix *-ul*; and Eng. suffix *-ose*, from Lat. *-osus*.] Growing in small tufts forming dense patches, as the young stems of many plants.

çæs-tūs, **†çēs-tūs**, s. [Lat. *cæstus* = cestus.] A boxing-glove. It was of leather, in certain cases loaded with lead or iron.

"The prizes next are order'd
To the field,
For the bold champions who
the *cæstus* wield."

Pope: *Homer's Iliad*, xxiii.
753-4.

çæ-sū'-lī-a, s. [Lat. *cæsus* = beaten.]

Bot.: A genus of plants, consisting of a single species, *C. axillaris*, a native of India. It is a small weed, growing in moist places, and has purple or white florets.

çæ-sūr'-a, **çæ-sūr'-a**, ***çæš-ūre**, ***çēa'-šūre**, s. [In Fr. *césure*; Sp. & Ital. *cesura*; Lat. *cæsura* = a cutting off, from *cædo* = to cause to fall, to fall, to cut.]

***I. Ord. Lang.**: Of the forms *ceasure* and *caesure*.

"Vulgar languages that want
Words and sweetness, and be scant
Of true measure,
Tyran rime hath so abused,
That they long since have refused
Other *ceasure*."

B. Jonson: *A Fit of Rime against Rime*.

"And I beyond measure,
Am ravish'd with pleasure,
To answer each *ceasure*."

Drayton: *Third Nymphal*.

II. Prosody: A pause in a verse. If in all cases such a rest for the breath occurred only at the termination of the several words, a painful sense of monotony would be experienced; hence the *cæsura*, as a rule, cuts off the last syllable from a word, and on the syllable so separated the stress is laid. In the line—

"Armā vī | rūmqūē cā | nō Trō | jē qūī |

cāl'-a-bāsh, s. [Sp. calabaza=a gourd, a pumpkin, which the fruits superficially resemble.]

1. A tree, the *Crescentia Cujete*, the typical one of the order *Crescentiaceæ*, or *Crescentiads*. It is a tree about thirty feet high, found in some places wild, in others cultivated, in the West Indies and other tropical parts of America. Its flowers are variegated with green, purple, red, or yellow; its leaves are narrowly elliptical. Its fruits are oval or globular, and are so hard externally that where they grow they are used as household utensils, such as basins, water-bottles, and even kettles. They are not easily broken by rough usage or burnt by exposure to fire. The pulp is purgative, and considered useful in chest diseases; when roasted, it is employed as a poultice for bruises and inflammations.

2. The fruit of the above tree, which is inclosed in a shell used by the natives of the Caribbee Islands for drinking-cups, pots, musical instruments, and other domestic utensils.

3. A cup or utensil made of the shell inclosing the fruit of the above tree.

calabash-nutmeg, s. The *Monodora myristica*, a tree of the order *Anonaceæ*, introduced into Jamaica probably from Western Africa. The fruits resemble small calabashes; hence the name. It is called also American nutmeg, or Jamaica nutmeg.

cāl'-a-dē'-nī-a, s. [Gr. kalos=beautiful; adēn=a gland.]

Bot.: A genus of Australian plants, belonging to the order *Orchidaceæ*, or *Orchids*. The flowers are covered in a very remarkable way with glandular hairs, which have suggested the name.

cāl'-a-dī'-ē'-æ, s. [From caladium, with fem. pl. suff. *-æ*.]

Bot.: A family of plants belonging to the natural order *Aroideæ*, or *Araceæ*. The genera have the stamens and pistils numerous, contiguous, or separated by the rudimentary bodies; spadix usually naked at the point and the cells of the anthers with a very thick connective.

cāl'-ā-dī-ūm, s. [Etymology unknown.] The name was first introduced by Rumphius.

Bot.: A genus of endogenous plants, the typical one of the family *Caladiæ* (q. v.). They are cultivated in greenhouses here, and flourish in warmer parts of the world. The leaves of *Caladium sagittifolium* are boiled and eaten as a vegetable in the West Indies. The rootstocks or rhizomes of others are eaten there and in the Pacific, the process of cooking destroying the dangerous acidity.

***ca'-lad-rie, s. [Sp. calandria, caladre; Ital. calandra; Gr. kalandra.]** A bird, either a jay or a lark.

"A cormeraunt and a caladrie . . ."—*Wycliffe: Deut. xiv. 18.*

ca-lā'-ite, s. [Lat. callais; Gr. kalais or kallais = a topaz or chrysolite.]

calamander-wood, s. "A valuable furniture wood from India and Ceylon, of a hazel-brown color with black stripes, very hard in texture; called also coromandel wood." (*Simmonds.*)

cāl'-a-mār-ŷ, s. [From Lat. calamus; Gr. kalamos=a reed, a cane; an object made of reeds, a pen.]

Zoology:

1. The English name of the cephalopodous genus *Loligo*, and specially of the *Loligo vulgaris*, or Common Calamary.

2. *Pl.:* The English name for the Cephalopod mollusks of the family *Teuthidæ*. The shell consists of an internal expansion or "pen," with a central shaft and two lateral wings. The species are called also Squids. [*TEUTHIDÆ*.]

ca-lām'-bāc, s. [O. Fr. calambac, calambouc; Sp. calambac, calambuco; Port. calamba, calambuco; from Pers. kalambak=a fragrant kind of wood.]

Bot.: Aloes-wood, the product of a tree growing in China and some of the Indian isles. It is of a very light, spongy texture, containing a soft, fragrant resin, which is chewed by the natives. [*AGALLOCH, ALOES-WOOD*.]

ca-lām'-boūr, s. [CALAMBAC.]

Bot.: A species of *Calambac*, less fragrant, and of a dark, mottled color; much used by cabinet-makers.

†cāl'-ām-īf-ēr-oūs, a. [Lat. calamus=a reed; fero=to bear.] Bearing reeds, reedy.

cāl'-a-mīne, cāl'-a-mīn-ār'-is, s. [In Ger. galmei. From Low Lat. calaminaris, in the term lapis calaminaris, a former name for this mineral. Lat. calamus=a reed, in allusion to the stalactitic form of one variety; or more probably a corruption of Lat. cadmia, cadmea; Gr. kadmeia; kadmia=calamine.]

Min.: A transparent or translucent brittle orthorhombic mineral, of a vitreous or even adamantine luster, its color white yellowish or brown, its hardness 4.5-5, its specific gravity 3.16-3.90. It possesses double refraction. Composition: Silica, 23.2-25.23; oxide of zinc, 62.85-68.30; and water, 4.4-10.8. It is a native carbonate of zinc, $ZnCO_3$. It is often associated with Smithsonite. [*SMITHSONITE*.] It is found in this country, in Scotland, Wales, England, and on the continent of Europe. Dana makes three varieties: 1. Ordinary (1) In crystals (2) Mammillary or Stalactitic, the latter including Wagite. 2. Carbonated. 3. Argillaceous. (*Dana, &c.*)

***Earthy calamite: [HYDROZINCITE.]**

cāl'-a-mīnt (Eng.), cāl'-a-mīn'-thā (Lat.), s. [Lat. calamintha; Gr. kalaminthē; kalaminthos=catmint, mint; kala, fem. of Eol. adj. kalos=beautiful; and mintha, minthē, minthos=mint.] [MENTHA, MINT.]

Botany:

1. (*Of the form Calamintha*): A genus of labiate plants, tribe *Melisseæ*. Among the species may be named *Calamintha officinalis*, *C. clinopodium*, and *C. acinos*.

2. (*Of the form Calamint*): The English name of *Calamintha officinalis*. It is a perennial plant, with opposite leaves and second cyruces.

***cāl'-a-mīst, s. [Lat. calamus=a reed.]** One who plays upon a pipe or reed instrument.

***cāl'-a-mīs'-trāte, v. t. [O. Fr. calamistrer; Lat. calamistratus, pa. par. of calamistro=to curl the hair; calamister, calamistrum=a curling-iron; calamus=a reed.]** To curl or frizzle the hair.

"Which belike makes our Venetian ladies, at this day, to counterfeit yellow hair so much; great women to calamistrate and curl it up, to adorn their heads with span-gles, pearls, and made-flowers; and all courtiers to affect a pleasing grace in this kind."—*Burton: Anat. of Mel., p. 469.*

***cāl'-a-mīs'-trā'-tion, s. [CALAMISTRATE.]** The act or process of curling the hair.

"Those curious needle-works, variety of colors, jewels—embroideries, calamistrations, ointments, &c., will make, the veriest dowdy otherwise, a goddess."—*Burton: Anat. of Mel., p. 475.*

cāl'-a-mīs'-trūm, s.; pl., cāl'-a-mīs'-trā. [Lat. Calamistrum=a hair-curling tube.] *Biol.:* One of the curved movable spines occurring on the hind legs of certain spiders, used in arranging the silk into a web as it issues from the spinnerets.

cāl'-a-mīte, †cāl'-a-mīt (Eng.), cāl'-a-mī-tēs (Lat.), s. [Fr. calamite; Lat. calamus=a reed.]

1. *Bot. & Paleont.:* A coal fossil plant recurring in the form of jointed fragments, formerly cylindrical, and perhaps hollow, but now crushed and

flattened. The stems are branched, and there appears to have been a distinct wood and bark. Both stems and branches are ribbed and furrowed. Some refer the numerous species of Calamites to Equisetaceæ, but the presence of wood and bark has led others to place them among the Dicotyledons.

"Calamites are the stems of fossil Equisetaceæ."—Thomé (transl. by Bennet) (1879), p. 322.

*2. *Min.*: An obsolete name for TREMOLITE.

ca-lām'-it-ōūs, a. [Fr. *calamiteux*; Lat. *calamitosus*=full of calamity or misery; *calamitas*=calamity, misery.]

1. *Objectively*: Causing distress or unhappiness; attended with misery; unhappy, wretched

"Meanwhile abridged

Of daily comforts, gladly reconciled

To numerous self-denials, Margaret

Went struggling on through those calamitous years."

Wordsworth: *Excursion*, bk. i.

"And he in that calamitous prison left."

Milton: *Samson Agonistes*, 1,480.

*2. *Subjectively*: Wretched, unfortunate; involved in calamity.

"This is a gracious provision God Almighty hath made in favor of the necessitous and calamitous."—Calamy.

ca-lām'-it-ōūs-lŷ, adv. [Eng. *calamitous*; -ly.] In a calamitous or wretchedly unfortunate manner or state.

Bot.: A genus of plants, natives of China, belonging to the order Bignoniaceæ. [ECCREMOCARPUS.]

cāl'-a-mūs, s. [Lat. *calamus*; Gr. *kalamos*=a reed or cane.]

1. *Scripture*: A sort of reed or sweet-scented wood, mentioned in Scripture with the other ingredients of the sacred perfumes. It is a knotty root, reddish without and white within, which puts forth long and narrow leaves, and is brought from the Indies. The prophets speak of it as a foreign commodity of great value. These sweet reeds have no smell when they are green, but when they are dry only. Their form differs not from other reeds, and their smell is perceived upon entering the marshes.

"Take thou also unto thee principal spices of pure myrrh, of sweet cinnamon, and of sweet calamus."—*Exodus*, xxx. 23.

2. *Music*: A reed-flute. Probably a simple rustic instrument like our oaten-pipe. But some suppose it to have been similar in construction to the *syrix*, or pau-pipes, and to have been synonymous with *arundo*. From *calamus* is derived the post-classical *calamauulos*, a flute made of reed, whence *calamaulis*, *kalamaulēs* and *kalamaulētēs*, a player on reed-pipes; hence, too, *chalamearu*, *schalmey*, *shawm*, the precursor of the modern clarionet, one of the registers of which is still said to be of *chalamearu* tone. (Stainer & Barrett.)

3. *Botany*:

(1) A fistular stem without any articulation.

(2) A genus of palm trees. Upward of 80 species are known, nearly all from Southern Asia. *Calamus rotang*, *C. rudentum*, *C. verus*, *C. viminalis*, furnish the rattans or canes used for the bottoms of chairs and couches, and *C. Scipionum* the Malacca canes employed in walking.

calamus arom. ticus, s.

1. *Popul. Bot.*: A plant, *Diotis maritima*.

cāl-a-thō'-dēs, s. [Gr. *kalathos*=a basket; *eidos*=appearance, likeness.]

Bot.: A genus of Ranunculaceæ, comprising a single species, *Calathodes palmata*, from Sikkim. It is a perennial herb, with large terminal and solitary flowers; petals none.

cāl'-a-thūs, s. [Lat. *calathus*; Gr. *kalathos*=a basket.]

*1. A kind of hand-basket, made of light wood or rushes. Used by women sometimes to gather flowers, but chiefly, after the example of Minerva, to put their work in. It was narrow at the bottom and widening upward.

2. *Entom.*: A genus of coleopterous insects of the tribe Carabidæ.

ca-lā'v-ēr-ite, s. [From *Calaveras*, where it is found.]

Min.: A telluride of gold, from the Stanislaus mine, Calaveras Co., California. It occurs massive without crystalline structure; color, bronze yellow; streak, yellowish gray; brittle. Compos.: Tellurium 55.53, gold 44.47.

cāl'-ca-dīs, s. [Arab.]

Med.: A name given by the Arabs to white vitriol or to some white vitriolic mineral.

cāl'-cāire, s. [Fr., as *a.*=calcareous, limy; as *s.*=a calcareous rock.]

Geol.: A word used in English only in the two subjoined terms.

calcaire grossier, s. [Fr. *grossier*=thick, coarse.]

Geol.: A rock or stratum consisting of a coarse limestone often passing into sand. It occurs in the Paris basin, and is used as a building stone. It is of Middle Eocene age. It abounds in shells, especially species of *Cerithium*. In other parts there is Miliolite Limestone, consisting of millions of microscopic foraminifera. (Lyell.)

calcaire siliceux, s. [Fr. *siliceux*=siliceous, flinty.]

Geol.: A compact siliceous limestone associated with the Calcaire Grossier, and coeval with it.

cāl-cān'-ē-āl, a. [From Mod. Lat. *calcaneum* (q. v.), and Eng. suffix -al.] Pertaining to the calcaneum or bone of the heel.

cāl-cān'-ē-ūm, s. [From Lat. *calx* (genit. *calcis*).]

Anat.: The bone of the tarsus which forms the prominence of the heel or the hock. (Huxley.)

cāl'-car (1), s. [Lat. *calcaria*=a lime-kiln; *calcarius*=pertaining to lime; *calx* (genit. *calcis*), =lime.]

1. *Glass-making*: A name given to a small furnace in which the first calcination is made of sand and potash, for the formation of a frit, from which glass is made. [FRETTING-FURNACE.] (Ure.)

2. *Metal*: An annealing arch or oven. (Knight.)

cāl'-car (2), s. [Lat. *calcar*=a spur; from *calx* (genit. *calcis*)=the heel.]

Bot.: A spur, a projecting hollow or solid process, from the base of an organ, as in the flowers of Larkspur and Snapdragon; such flowers are called calcarate, or spurred. (Balfour.)

cāl'-car-āte, a. [*Calcar* (2); -ate.]

Bot.: Spurred [For definition see CALCAR (2), s.]

"By the irregular development of one or more sepals the spurred (*calcarate*) only of Larkspur and of Indian Cress is produced."—*Balfour: Botany*, p. 202.

cāl-cār'-ē-ā, a. [Lat. *calcaria*, nom. pl. of *a. calcarius*=pertaining to lime.]

Zoöl.: The same as CALCEPONGIÆ (q. v.).

cāl-cār'-ē-ō, only in compos. [Eng. *calcareo(us)* (q. v.).]

calcareo-argillaceous, s.

Min.: Consisting of or containing calcareous and argillaceous earths.

calcareo-barite, s.

Min.: A white barite from Strontian, in Argyleshire, containing, probably as mixture, 6.6 per cent. of lime and some silica and alumina.

Calash.

calcareo-bituminous, a.

Min.: Consisting of or containing calcareous and bituminous earths.

calcareo-silicious, a.

Min.: Consisting of or containing calcareous and silicious earths.

calcareo-sulphurous, a.

Min.: Consisting of or containing calcareous and sulphurous earths.

cāl-cār'-ē-ōūs, a. [Lat. *calcarius* = pertaining to lime; *calx* (genit. *calcis*) = lime.]

1. *Min.*: Consisting of or containing carbonate of lime; of the nature of limestone.

2. *Geol.*: Calcareous rocks are generally of animal origin. They consist of fragments of shells, corals, encrinites, or of globigerinae, and other foraminifera. Even when so wholly crystalline that no traces of old organisms can be detected, there is reason to believe that these previously existed and have been destroyed by metamorphic action.

calcareous barytes, s.

Min.: A variety of barytes, with an abnormal quantity of carbonate of lime in its composition.

calcareous earth, s. [In Fr. *terre calcaire*; Ger. *Kalkerde*.] A term commonly applied to lime in any form, but properly to pure lime. It is also frequently applied to marl, and to earths containing a considerable proportion of lime.

calcareous marl, s.

Min.: A soft, earthy deposit, often hardly at all consolidated with or without distinct fragments of shells; it generally contains much clay, and graduates into a calcareous clay. (*Dana*.)

calcareous spar, s.

Min.: Calcite, crystallized native carbonate of lime, of which there are many varieties. The usual composition is carbonic acid 44.0, lime 56.0, but it often contains impurities, upon which depend the colors assumed by the crystal. Carbonates of lime are widely distributed in nature, as marbles, chalk, &c. [ICELAND-SPAR, MARBLE.]

calcareous sponges, s. pl. An order of sponges—the Calcispongiae (q. v.).

calcareous tufa, s.

Min.: A term applied to varieties of carbonates of lime, formed by evaporation of water containing that mineral in solution, occurring in fissures and caves in limestone rocks, and near springs, the water of which is impregnated with lime.

cāl-cār'-ē-ōūs-ness, s. [Eng. *calcareous*; -ness.] The quality of being calcareous, or partaking of the nature of limestone.

cāl-car'-if-ēr-ōūs, a. [Lat. *calcaria* = a lime-kiln; *fero* = to bear.] Producing lime, calciferous.

cāl-cār'-i-form, a. [Lat. *calcar* = spur; *forma* = form, appearance.]

Bot.: Shaped like a calcar, or spur; spur-shaped.

cāl-car'-i-na, s. [Lat. *calcar* = a spur; neut. pl. adj. suff. -ina.] One of the Rotaline Foraminifera. It is coated with exogenous shell growth, as granules, spires, &c. Shell thick. Common in several tertiary strata, and living abundantly in the Mediterranean and other warm seas. (*Griffith & Henfrey*.)

cāl-ca-vāl'-lā, s. [Port.] A kind of superior sweet wine from Portugal.

cāl-çē-ā'-tēd, a. [Lat. *calceatus*, pa. par. of *calceo* = to shoe; *calceus* = a shoe.] Furnished with shoes, shod.

cālçed, a. [Lat. *calceatus* = shod.]

1. *Gen.*: Wearing shoes or boots, not sandals.
2. *Spec.*: Pertaining or belonging to that branch of the Carmelite Order, which did not accept the reform of St. Teresa. [DISCALCED.]

"Subject to the Father-General of the calced Carmelites."—*Miss Lockhart: Life of St. Teresa* (Note C.).

cāl-çē'-dōn, s. [CALCEDONY.] A fowl vein like calcedony in some precious stones. (*Ash*.)

cāl-çē'-dōn-ic, cāl-çē'-dō'-nī-an, a. [Lat. *calcedonius* = a calcedony.] Pertaining to, or of the nature of calcedony.

***cāl-çē'-dōn-ŷ, s.** [CHALCEDONY.]

cāl-çē'-i-form, a. [Lat. *calceus* = a shoe; *forma* = form, shape.]

Bot.: The same as CALCEOLATE (q. v.).

cāl-çē'-ō-lā, s. [Lat. *calceolus* = a little shoe or slipper; *calceus* = a shoe.]

Zool.: A genus of brachiopod mollusca, of the family Orthidae, the bivalve shell of which is somewhat slipper-shaped. It is fossil only, being found in the Devonian rocks.

cāl-çē'-ō-lār'-i-a, s. [Lat. *calceolarius* = a shoe-maker, from *calceolus* = a little shoe, a slipper; *calceus* = a shoe.]

Bot. & Hort.: A well-known and beautiful genus of plants—order Scrophulariaceae. The resemblance to a shoe is in the bilabiate corolla of the best known species, the elongated lower lip of which is inflated and turned down. The stamens are only two. The species, which are numerous, come from South America, chiefly from the western slope or side of the Andes. The greater number have yellow flowers, others are purple, while in a few the two colors are intermingled. The roots of *Calceolaria arachnoida* are collected in Chili, where they are called *reibun*, and are used for dyeing woolen cloth crimson. Various calceolarias are cultivated in this country.

cāl-çē'-ō-lāte, a. [Lat. *calceolus* = a little shoe, a slipper, and Eng. suff. -ate.]

Bot.: Having the form of a shoe or slipper. Examples, the petals of the orchid *Cypripedium* and the *Calceolaria*, or Slipper-plant.

cāl-çēs, cāl'-xes, s. pl. [CALX.]

cāl'-çic, a. [From Lat. *calx* (genit. *calcis*) = lime, and Eng. suff. -ic.] Pertaining to or composed in whole or in part of lime, as *calcic carbonate*, *calcic oxide*.

cāl-çif-ēr-ōūs, a. [Lat. *calx* (genit. *calcis*) = lime, chalk; *fero* = to bear.]

Min.: Containing or producing calcite or carbonate of lime.

cāl-çif-ic, a. [Eng. *calcif*(y); -ic.] Calciferous, calcic. (*Huxley: Physiology*, ch. 12.)

†cāl-çif-i-cā'-tion, s. [Lat. *calx* (genit. *calcis*) = lime; *facio* = to make.] The process of being converted into a stony substance containing lime.

"... and it seems probable that the solid mass of fully formed bone is formed by the calcification of this tissue."—*Carpenter: Principles of Physiology*, p. 203.

cāl'-çī-fied, pa. par. or a. [CALCIFY.]

"Calcified teeth are peculiar to the vertebrates, and may be defined as bodies primarily, if not permanently, distinct from the skeleton, consisting of a cellular and tubular basis of animal matter containing earthy particles, a fluid, and a vascular pulp."—*Owen: Anat. of Vertebrates*.

†cāl'-çī-form, a. [Lat. *calx* (genit. *calcis*) = lime; *forma* = form, appearance.] In the form of chalk or lime.

cāl'-çī-fŷ, v. t. [Lat. *calx* (genit. *calcis*) = lime; *facio* (pass. *fio*) = to make.] To convert into lime.

"Were this sheath actually dentinal in tissue and united to the jaw-bone, the resemblance to the Lepidosiren would be closer; but it is never calcified, and is shed during the progress of the metamorphosis."—*Owen: Anat. of Vertebrates*.

cāl-çī-mān'-gīte, s. [From Lat. *calcium*; Eng. *mang(anese)*, and suff. -ite (*Min.*) (q. v.).]

Min.: The same as SPARTHITE (q. v.).

cāl'-çī-mine, s. [Lat. *calx* (genit. *calcis*) = lime.] White or colored wash for walls (usually made of ground anhydrous or calcined gypsum) much finer than common whitewash. Various coloring substances are used.

cāl'-çī-mine, v. t. [CALCIMINE, s.] To wash over with calcimine; as, "to calcimine walls."

†cāl-çī'-nā-ble, a. [Eng. *calcin*(e); -able.] Capable of being calcined; that may be calcined.

"Not fermenting with acids, and imperfectly calcinable in a great fire."—*Hill: Fossils, Of Granite*.

cāl'-çin-āte, v. t. [Low Lat. *calcinatus*, pa. par. of *calcino* = to calcine.] To calcine.

"... first, it indurates, then maketh fragile, and lastly it doth calcinate."—*Bacon: Nat. Hist.*

cāl-çin-ā'-tion, *cāl-çin-ā'-cioun, s. [Low Lat. *calcinatus*, pa. par. of *calcino* = to calcine.]

1. The operation of expelling from a substance by heat, either water or volatile water combined with it. Thus, the process of burning lime, to expel the carbonic acid, is one of *calcination*. The result of exposing the carbonate of magnesia to heat, and the removal of its carbonic acid, is the production of *calcined magnesia*. The term was, by the earlier chemists, applied only when the substance exposed to heat was reduced to a *calx*, or to a friable powder, this being frequently the oxide of a metal. It is now, however, used when any body is subjected even to a process of wasting. (*Ure*.) Marble, limestone, and chalk, which are all carbonates of lime, are deprived of their carbonic acid and water by calcination. It also deprives copper and other ores of their sulphur, the sulphurets being oxidized and sulphuric acid being disengaged and volatilized.

"Oure fourneys eke of calcinacioun."
Chaucer: C. T., 12,732.

"Adustion causeth blackness and calcination whiteness."—*Bacon: Works* (ed. 1765), vol. i., ch. xi.

2. The operation of reducing a metal to an oxide; oxidation.

*3. The result of the process of calcining.

calcination-pot, s. A sort of crucible used for preparing animal charcoal.

†cāl'-çī-nā-tōr-ŷ, s. [Low Lat. *calcinatorium*.] A vessel or crucible used in calcination.

cāl'-çine, v. t. & i. [Fr. *calciner*; Low Lat. *calcino*; Lat. *calx* (genit. *calcis*) = chalk.]

A. Transitive:

I. Literally:

1. To reduce to a powder.

"Moses, with an actual fire calcined, or burnt the golden calf unto powder."—*Sir T. Browne: Religio Medici*.

"The turf being, as it were, calcined by the scorching hoofs of their diabolical partners."—*Scott: Black Dwarf*, ch. ii.

2. To reduce a metal to an oxide; to oxidize.

*3. To utterly consume.

"This earth at last shall be calcined."
H. More: Enthous. Triumph.

***II. Figuratively:** To consume.

"You by a chaste chimicke Art,
Calceine fraile love to pietie."
Habington: Castara.

B. Intransitive: To be reduced to a powder; to become calcined.

"... in a very strong heat, calcining without fusion."—*Newton: Optics*.

cāl'-çined, pa. par. & a. [CALCINE, v.]

1. Reduced to a powder.

"Antimony calcined or reduced to ashes."—*Browne: Vulgar Errors*.

2. Oxidized.

"When a decoction of meat is effectually screened from ordinary air, and supplied solely with calcined air, putrefaction never sets in."—*Tyndall: Frag. of Science*, 3d ed., xi. 301.

†cāl'-çī-nēr, s. [CALCINE.]

1. *Gen.*: One who, or that which, calcines.

2. *Spec.*: A calcining or roasting furnace.

cāl'-çī-nīng, *cal-çen-yng, pr. par., a. & s. [CALCINE, v.]

A. & B. As pr. par. & partic. adj.: In senses corresponding to those of the verb.

C. As substantive: The act of reducing to a powder; calcination.

"In amalgamyng and calcenyng."
Chaucer: C. T., 12,699.

calcining-furnace, s. A large reverberatory furnace, having a fire at one end, two chimneys at opposite corners, four doors at which the operation is observed, the rabbles introduced, and the material withdrawn, and hoppers above by which the ore is introduced.

cāl-çī-nī'-tre, s. [Lat. *calx* (genit. *calcis*) = lime, and *nitre* (q. v.).]

Min.: The same as NITROCALCITE (q. v.).

***cāl'-çin-ize, v. t.** [CALCINE.] To calcine. (*Sylvester: Du Bartas*.)

cāl-çī-ō-çē-lēs-tīte, s. [Lat. *calcis* = pertaining to lime; *calx* (genit. *calcis*) = lime; *caelestis, celestis* = heavenly, sky-blue; *cælum* = heaven.]

Min.: A variety of Celestite (q. v.), containing a large proportion of lime.

cāl-çī-ō-fēr'-rite, s. [Lat. *calcis* = pertaining to lime; *calx* (gen. *calcis*) = lime; *ferr(um)* = iron; suff. -ite (*Min.*) (q. v.).]

Min.: A sulphur, yellow or yellow mineral, from Battenberg, in Bavaria. Specific gravity, 2.52-2.529. Composition: Phosphoric acid, 34.01; sesquioxide of iron, 24.34; alumina, 2.90; magnesia, 2.65; lime, 14.81; hydrogen, 20.56.

cāl-çī-spōn'-gī-æ, s. pl. [From Lat. *calx* (genit. *calcis*) = lime, and *spongia* = a sponge.] [SPONGE.]

1. *Zool.*: Calcareous sponges. One of the leading divisions of Spongia (sponges), the others being Keratoda (horny sponges), Silicispongiae (siliceous sponges), and Myxospongiae (sponges with neither a horny nor a siliceous skeleton). The living species of calcareous sponges have a skeleton composed of spicules of lime, and are generally free and independent of each other.

2. *Palæont.*: What fossil genera should be referred to this group has not yet been finally determined.

cāl'-çite, s. [Lat. *calx* (genit. *calcis*) = chalk, and suff. -ite (q. v.).] Crystallized carbonate of lime. [ICELAND-SPAR.]

cāl-çī-trā'-pā, s. [From Mod. Lat. *calciatrapa*; Gael. *calg* = a bristle, and Eng. *trap*.] [CALTROP.] *Bot.*: A name for the Star-thistle, *Centaurea calciatrapa*.

cāl'-çī-trāte, v. t. & i. [O. Fr. *calcitrer*; Lat. *calcitro* = to kick, from *calx* (genit. *calcis*) = a heel.] To kick, to spurn. (*Cotgrave & Cockeram*.)

bōil, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, this; sin, aş; expect, Xenophon, exist. ph = f.
-cian, -tian = şan. -tion, -sion = şhñ; -tion, -şion = zhñ. -tious, -cious, -sious = şhş. -ble, -dle, &c. = bəl, dəl

cāl-qi-trā-tion, s. [From Eng. *calcitrate* (q.v.), and suff. *-ion*.] The act of kicking.

cāl-qi-ūm, s. [From Lat. *calx* (genit. *calcis*) = lime.]

Chem.: A dyad metallic element. Symbol, Ca; atomic weight, 40; specific gravity, 1.57. Obtained by Davy by decomposing the chloride by electricity; also by heating the iodide with sodium in a closed vessel. Calcium is a brass-yellow, ductile, malleable metal, which oxidizes in damp air; it decomposes water, and dissolves easily in dilute acids. Heated in the air, it melts at red heat, and burns with a bright orange light. Calcium occurs in nature chiefly as a carbonate, silicate, and sulphate. Calcium oxide, CaO, called also Lime, is obtained by heating the carbonate of calcium to redness. It is a white, earthy, infusible powder, phosphorescent at high temperatures; it is strongly alkaline, and readily absorbs carbonic anhydride. It unites vigorously with water, throwing out great heat, and forms a hydrate, CaOH₂O, which is slightly soluble in cold water; it is used in medicine as lime-water. Impure lime mixed with sand forms mortar.

Calcium sulphate, CaSO₄, found as hydride as gypsum, CaSO₄·2H₂O, and selenite and alabaster. The water is given off by heating it, and a white powder is left, which dissolves in 500 parts of cold water. Mixed with water, it sets in a hard substance; it is used under the name of plaster of Paris for making casts of medals and statues, &c.

Calcium carbonate, CaCO₃, forms the chief constituent of limestone, marble, chalk, &c. It occurs crystallized as calc-spar and aragonite. Calcium carbonate is insoluble in water, but is dissolved by water containing carbonic acid gas; it is deposited from this solution by boiling, hence boiler deposits.

Calcium phosphates occur in the bones of animals and are native in Apatite. [PHOSPHATES.] Calcium chloride, CaCl₂, is obtained by dissolving the carbonate in hydrochloric acid. It crystallizes in white prismatic crystals; it is very deliquescent. Fused calcium chloride is used to dry gases, &c. It absorbs ammonia gas.

Calcium fluoride, CaF₂, occurs as fluor spar.

Calcium sulphides and phosphides have been obtained. Salts of calcium are not precipitated by H₂S, either in an acid or alkaline solution. Alkaline carbonates and ammonia carbonate give a white precipitate insoluble in excess; oxalate of ammonia gives a white precipitate from a neutral solution; the precipitate is not soluble in acetic acid. A solution of sulphate of calcium gives no precipitate. The chloride gives an orange-red flame with alcohol. The spectrum of calcium gives several characteristic lines, especially an orange-red and a green line. Chloride of lime, or bleaching powder, is a mixture of calcium chloride and calcium hypochlorite.

¶ **Calcium Arsenate (Min.)** is = Pharmacolite; **Calcium Borosilicate** = Datholite; **Calcium Carbonate** = (1) Calcite, (2) Aragonite; **Calcium Columbate** = (1) Microlite, (2) Azorite; **Calcium Phosphate** = Apatite; **Calcium Silicate** = (1) Wollastonite, (2) Okenite; **Calcium Sulphate** = Selenite; and **Calcium Tungstate** = Scheelite, all which see.

calcium-carbide, s. A compound of calcium and carbon (CaC₂) discovered by Henry Moisson, a French chemist, in 1894, while experimenting with an electric furnace. It is a powder of a grayish color, which, when subjected to the action of water, rapidly generates acetylene (q.v.), the lime being precipitated.

calcium-light, s. The Drummond or oxyhydrogen light, in which streams of oxygen and hydrogen are directed and inflamed upon a ball of lime whose incandescence gives a very vivid and brilliant light. [DRUMMOND-LIGHT.] (*Knight*.)

†cāl-qi-v-ōr-oūs, a. [From Lat. *calx* (genit. *calcis*) = limestone, lime, and *voro* = to devour.

Bot.: Eating into or corroding a limestone rock. (*R. Brown*, 1874.)

cāl-cō-graph-i-cāl, a. [From Eng. *calco-graph(y)*; *-ical*.] Pertaining to calcography (q.v.).

cāl-cōg-rāph-ŷ, s. [Gr. *kalkos* = brass and *graphē* = a writing, drawing, from *graphō* = to write.] The art of engraving on brass.

cāl-cōur-ān-ite, s. [From Ger. *calcouranit*, *kalk-uranit*; *kalk* = chalk, and *uranit* = uranite (q.v.).]

Min.: The same as AUTUNITE (q.v.).

cāl-c-šin-tēr, s. [Ger. *kalk* = chalk, and *sinter* = dross.] The incrustations of carbonate of lime upon the ground; or the pendulous conical pieces, called stalactites, attached to the roofs of caverns, &c. (*Ure*.)

cāl-c-spar, s. [Ger. *kalk* = chalk, and Eng. *spar* (q.v.).] Crystallized carbonate of lime or calcite. [CALCAREOUS-SPAR.]

cāl-c-tūff, s. [Ger. *kalk* = chalk, and *tuff* = tufa (q.v.).] A formation of carbonate of lime from the deposits of springs, &c. [CALCAREOUS-TUFA.]

fāte, fāt, fāre, amidst, whāt, fāl, father; wē, wēt, hēre, camel, hēr, thēre; pine, pīt, sīre, sīr, marine; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trŷ, Sŷrian. æ, œ = ē; ey = ā. qu = kw

†cāl-c-u-lā-bīl-i-tŷ, s. [Eng. *calcul(ate)*; *ability*.] Possibility or capability of being calculated, estimated, or provided for.

cāl-c-u-lā-ble, a. [Fr. *calculable*.] Capable of being calculated.

"I have made every calculable provision."—*W. Taylor: Monthly Mag.*

cāl-c-u-lār-ŷ, a. & s. [Lat. *calcularius*, from *calculus* = a little stone; *calx* = (1) lime, chalk; (2) a pebble.]

A. As adj.: Pertaining to or caused by the disease of stone in the bladder.

"Motion was tedious and noxious to him, by reason of his calculary infirmity and corpulency."—*Bp. Gauden: Life of Bp. Brownrigg*, 1660, p. 218.

B. As subst.: A mass of small stony lumps found in the pear and other fruits.

cāl-cūl'-a-graph, s. An instrument employed in long distance telephony for registering the time a line is in continuous use.

cāl-c-u-lāte, v. t. & i. [Lat. *calculatus*, pa. par. of *calculo* = to reckon by means of pebbles; from *calculus* = a little stone, a pebble; dimin. of *calx* = (1) lime, chalk; (2) a stone, pebble. In Fr. *calculer*; Sp. *calcular*; Ital. *calcolare*.]

A. Transitive:

1. Literally:

1. To compute, to reckon up in number.

"If, in calculating the numbers of the people, we take in the multitudes that emigrate to the plantations."—*Goldsmith: Essay x*.

*2. To divine or prognosticate by the situation of the planets at a certain time.

"A cunning man did calculate my birth."

Shakesp.: Hen. VI., Pt. II., iv. 1.

"Who were there then in the world, to observe the births of those first men, and calculate their nativities?"—*Bentley*.

II. Figuratively: To arrange or adjust for a purpose. (Seldom used except in the pa. par.)

"I calculate my remedy for this one individual kingdom of Ireland."—*Swift: Modest Proposal*.

B. Intransitive:

1. To make calculations; prognosticate.

"Why all these fires, why all these gliding ghosts, Why old men fool and children calculate?"

Shakesp.: Julius Cæsar, i. 3.

2. To form one's opinion on; to reckon or depend on; to expect. (*Colloquial, and chiefly American*.)

¶ Generally used with the prep. on before the matter on which the opinion is formed.

cāl-c-u-lā-tēd, pa. par. & a. [CALCULATE, v.]

"Cæsar . . . did set forth an excellent and perfect kalendar, more exactly calculated, than any other that was before."—*North: Plutarch*, p. 612.

cāl-c-u-lā-tīng (1), pr. par., a. & s. [CALCULATE, v.]

A. & B. As pr. par. & particip. adj.: In senses corresponding to those of the verb.

"With his cool, calculating disposition, he easily got the better of his ardent rival."—*Godwin: St. Leon*.

C. As substantive: The act or process of computing, reckoning, or estimating.

calculating engine, s. The same as CALCULATING MACHINE (q.v.).

"Such are the facts which, by a certain adjustment of the calculating engine, would be presented to the observer."—*Babbage: Ninth Bridgewater Treatise*, ch. ii.

calculating machine, s. A machine for making arithmetical calculations with speed and accuracy. The simplest one is the abacus (q.v.). The best known of such machines is that which Babbage was employed by the British Government to construct. He began the work in 1821, and continued it for about twelve years, till 1833, at an expense of £15,000, after which it was abandoned. The part completed is preserved in the library of King's College. The machine and its operations are too complex to be described here. [COMPTOMETER.]

***cāl-c-u-lā-tīng** (2), a. [Lat. *calculus* = a stone, pebble.] Turning into, or forming into a calculus or stone in the bladder.

†cāl-c-u-lā-tīng-lŷ, adv. [Eng. *calculating* (1); *-ly*.] In the manner of one calculating; by way of calculation.

cāl-c-u-lā-tion, s. [Lat. *calculus* = a small stone, a pebble, because pebbles were of old used in this country, as they still are among some uncivilized tribes, as aids in counting; Eng. suff. *-ation*.]

I. Literally:

1. The act of calculating, reckoning, or computing in numbers.

"One Bartholomew Scullet . . . hath by calculation found the very day."—*Raleigh: Hist. of World*, bk. iii., ch. 25.

"And, leaving it to others to foretell,

By calculation sage, the ebb and flow."

Wordsworth: Excursion, bk. vi.

2. The result of an arithmetical computation or reckoning.

"If we suppose our present calculation, the Phoenix now in nature will be the sixth from the creation."—*Browne: Vulgar Errors*.

II. Figuratively:

1. The act or process of estimating the force and result of circumstances.

2. The result of such estimation; the opinion formed of circumstances.

"The fate of the Triennial Bill confounded all the calculations of the best informed politicians of that time."—*Macaulay: Hist. Eng.*, ch. xx.

cāl-c-u-lā-tive, a. [Formed by analogy of other adjectives from an imaginary Lat. *calculativus*; from *calculus* = a pebble, stone.] Pertaining to calculation; involving calculation.

"Persons bred in trade have in general a much better idea, by long habits of calculative dealings, . . ."—*Burke: On the Popery Laws*.

cāl-c-u-lā-tōr, ***cāl-k'-ē-lā-tour**, s. [Fr. *calculateur*; Lat. *calculator* = one who reckons; *calculus* = a pebble, stone.]

I. Ordinary Language (of persons):

1. One who reckons or computes by numbers; a computer.

*2. One who prognosticates by astrology.

" . . . calkelatours and astronomye."—*Wycliffe: Select Works*, p. 408.

3. One who estimates the force or effect of causes; one who calculates results.

"Ambition is no exact calculator. Avarice itself does not calculate strictly when it games."—*Burke: On Shortening the Duration of Parliaments*.

II. Technically (of things):

1. An arithmometer or calculating machine for simple mathematical operations, the most improved form being the comptometer (q.v.).

2. A kind of orrery (q.v.) invented by Ferguson.

cāl-c-u-lā-tōr-ŷ, a. [Lat. *calculatorius* = pertaining to calculation; *calculus* = a pebble, stone.] Pertaining to calculation.

"That other calculatory or figure-casting astrology . . ."—*Hail: Cases of Conscience*.

***cāl-c-ūle**, s. [Lat. *calculus* = a pebble used in counting.] Reckoning, computation, calculation.]

"The general *calcule*, which was made in the last perambulation, exceeded eight millions."—*Hewel: Vocal Forest*.

***cāl-c-u-llīng**, **cāl'-ku-lŷnge**, ***kal'-ku-lŷnge**, pr. par., a. & s. [CALCULE, v.]

A. & B. As pr. par. & partic. adj.: (See the verb.)

C. As substantive: The act of calculating; calculation.

"When this kalkas knew by *calculyng*."

Chaucer: Troilus, i. 71.

***cāl-c-u-lōse**, ***cāl-c-u-lōus**, a. [Lat. *calculosus* = full of pebbles or stones; *calculus* = a pebble, a stone.]

1. **Ord. Lang.**: Full of stones, stony, gritty.

"The felde *calculose*, eke harde and drie."

Palladius, ii. 40.

2. **Medicine**:

(1) Affected with stone in the bladder; suffering from calculus.

"I have found, by opening the kidneys of a *calculosus* person, that the stone is formed earlier than I have suggested."—*Sharp*.

(2) Of the nature of a calculus.

"The volatile salt of urine will coagulate spirits of wine; and thus, perhaps, the stones or *calculose* concretions in the kidney or bladder, may be produced."—*Browne: Vulgar Errors*.

cāl-c-u-lūs, s. [In Fr. *calcul*; Sp. *calculo*; Port. *calculo* = the mathematical calculus; *calculo* = a calculus (in Med.); Ital. *calcolo*, or *calculo*; all from Lat. *calculus* = (1) a small stone or pebble, (2) a stone in the bladder, (3, 4, &c.) a stone used for voting or one for reckoning, &c.]

1. **Among the old Romans**: A stone used for voting. At trials white and black stones were thus employed, the white expressing a vote for acquittal and the black for condemnation.

2. **Med.**: The medical term for what is popularly known as stone. Calculi vary in size from a pin's

head to a pigeon's egg, and even larger, and weigh from a few grains to several ounces. They derive their special name and character as well from the organs of the body in which they are found as from the constituents of which they are composed. Thus, for example, a calculus found in the kidney or ureter is called renal, in the bladder vesical, and so on; but, according to its chemical composition, it would also be called either (1) uric (lithic) acid calculus, or (2) oxalic (mulberry) calculus, or (3) phosphatic calculus. Calculi derived from the bile are also found in the gall-bladder, and in the biliary and intestinal ducts, where they receive the name of gall-stones, or biliary calculi. Those found in the salivary glands are called salivary calculi.

3. *Math.*: Any branch of mathematics which may involve or lead to calculation. In this sweeping sense it embraces the whole science, with the exception of pure geometry. Thus there may be a calculus of functions, a calculus of variations, &c., but the leading divisions of the subject are the Differential and the Integral Calculus.

Calculus of functions: The calculus in which what is sought is the form of a function, and not its value in any particular case, nor the condition under which it may have a particular value.

Calculus of variations: A method in which the laws of dependance, binding together variable quantities, are themselves subject to change.

The *Differential Calculus* is a method of investigating mathematical questions by measuring the ratio of certain indefinitely small quantities called differentials. [DIFFERENTIAL.]

Imaginary Calculus: A method of investigating the nature of imaginary quantities required to fulfill apparently impossible conditions. The result proves that all absurdities in geometry may be ultimately resolved into attempts to measure a straight line in a direction different from that of its length.

The *Integral Calculus* reverses the process which obtains in the differential calculus; that is, it reasons out from the ratio of the indefinitely small changes of two or more magnitudes, the magnitudes themselves; or, as it is technically stated, from the differential of an algebraic expression it finds the expression itself. [INTEGRAL.]

câl'-dêr-îte, *s.* [Apparently from the proper name *Calder*, and suff. -ite (*Min.*) (q. v.).]

Min.: A doubtful mineral from Nepaul, said by Dana to be nothing but massive garnet. Some authorities, however, recognize it as a special variety of garnet.

câld'-rife, *a.* [CAULDRIFE.] (*Scotch.*)

câl'-drôn, caul'-drôn, *cau'-drôn, *s.* [O. Fr. *caldron*, *caudron*, *chaudron*; from O. Fr. *caldaru*; Lat. *caldaria*=caldron; *calidus*=hot; from *caleo*=to be hot; Sp. *calderon*; Ital. *calderone*.] A large kettle or boiler.

"And he struck it into the pan, or kettle, or caldron, or pot; . . ."—1 Sam. ii. 14.

"The limbs yet trembling, in the Caldrons boil."

Dryden: Virgil; Æneid, i. 296.

*câle (1), *s.* [KAIL, KALE.]

*câle (2), *s.* [Etymology doubtful.] Some kind of serpent.

"A feolle worm, cales and manticores."

King Alisaunder, 7,094.

câl'-ê-a, *s.* [Gr. *kalos*=beautiful.]

Bot.: A genus of composite plants, containing upward of thirty species, natives of Mexico and Brazil. They are herbs or small shrubs. *C. zacate-chichi*, a Mexican species, is known there by the name of Juralillo, and is said to contain, in a fresh state, a considerable quantity of camphor. The leaves of *C. jamaicensis* are said to be powerfully bitter, and steeped in wine or brandy are used as a stomachic in the West Indies. (*Treas. of Bot.*)

câl'-ê-â'-na, *s.* [Gr. *kalos*=beautiful.]

Bot.: A name applied to a few brown-colored terrestrial orchids, natives of New Holland. They are noticeable for their lip, which is posticous, peltate, unguiculate, and highly irritable. In fine weather or when undisturbed this lip bends back and leaves the column uncovered; but if it rains, or the plant is jarred, down goes the lip over the column, which it boxes up securely.

câl'-ê-che', *s.* [CALASH.]

Câl'-ê-dô'-nî-ân, *a. & s.* [Lat. *Caledonia*=Scotland.]

A. *As adjective*: Of or pertaining to Caledonia, the ancient name of Scotland.

A. *As substantive*:

1. *Ordinary Language*:

1. *Literally*:

(1) A register or list of the days of the year, according to its divisions into days, weeks, and months, showing the various civil and ecclesiastical holidays, festivals, &c.

"Cursed be the day when first I did appear;

Let it be blotted from the calendar."

Dryden: Palamon & Arcite, ii. 90.

"What hath this day deserved? what hath it done,
That it in golden letter should be set
Among the high tides in the calendar?"

Shakesp.: King John, iii. 1.

*(2) An almanac.

"Give me a calendar.

Who saw the sun today?"

Shakesp.: Rich. III., v. 3.

*2. *Figuratively*:

(1) An artificial almanac.

"Do you, for your own benefit, construct
A calendar of flow'rs, pluck'd as they blow."

Wordsworth: Excursion, bk. vi.

(2) A list or register, a roll.

" . . . the care I have had to even your content, I wish might be found in the calendar of my past endeavors."—Shakesp.: *All's Well*, i. 3.

(3) A compendium, an abstract, or epitome.

"Indeed, to speak feelingly of him, he is the card or calendar of gentry, for you shall find in him the continent of what part a gentleman would see."—Shakesp.: *Hamlet*, v. 2.

II. *Technically*:

1. A catalogue or abstract of state papers.

2. *Law*: A list or register of cases to be tried in a court of law; a register of the names of prisoners.

"The usage is for the judge to sign the calendar, or list of all the prisoners' names."—Blackstone: *Comment.*, bk. iv., ch. 30.

"Rhadamanthus, who tries the lighter causes below, leaving to his two brethren the heavy calendars . . ."—Lamb: *Last Essays of Elia*.

3. *Astron. & Chron.*: The Roman calendar is said to have been introduced by Romulus about 738 B. C., and modified by Numa Pompilius about 713 B. C. In 46 B. C., Julius Cæsar, giving effect to the calculations of Sosigenes, an Alexandrian mathematician and astronomer, reformed the calendar, and introduced the Julian style, by which the year was made to consist of 365 days, with 366 every fourth or leap year. He commenced it also with January 1st, the adjustment producing one year of confusion, which contained 445 days. Had the solar year consisted of 365 days, 6 hours, the Julian calendar would have been perfect; but its real length is 365 days, 5 hours, 48 minutes, 45½ seconds. The operation of the odd minutes and seconds continued during the next fifteen centuries, having again deranged the calendar ten days. Pope Gregory XIII. made A. D. 1582 consist of 355 days only, and otherwise adjusted the calendar. Roman Catholic countries at once adopted the reform. Protestant states one after another followed the example, while Russia and the Greek Church conserved the old Julian arrangement. When the new style was adopted in England by Act of Parliament in 1752, eleven days required to be struck out, the 3d of October being called the 14th. From this time the difference began between new and old style. To prevent further derangement the Gregorian arrangements provide that only one in four of the years ending centuries shall be leap-years; thus the years 1700 and 1800 were not leap-years, nor will 1900 be, but 2000 will.

As a result of the different arrangements made and the final disposition of the matter, the following facts have been observed:

The 1st of April and the 1st of July in any year, and in leap year the 1st of January, fall on the same day of the week.

The 1st of September and the 1st of December in any year fall on the same week day.

The 1st of January and the 1st of October in any year fall on the same week day, except it be a leap year.

The 1st of February, of March, and of November of any year fall on the same day of the week, unless it be a leap year, when Jan. 1, April 1, and July 1 fall on the same week day. The 1st of May, 1st of June, and 1st of August in any year never fall on the same week day, nor does any one of the three ever fall on the same week day on which any other month in the same year begins, except in leap year, when the 1st of February and the 1st of August fall on the same week day.

To find out on what day of the week any date of the 19th century fell, divide the year by four and let the remainder go. Add the quotient and the year together, then add three more. Divide the result by seven, and if the remainder is naught March 1 of that year was Sunday; if one, Monday; if two, Tuesday; and so on.

For the 18th century do the same thing, but add four instead of three. For the 20th century add two instead.

Christmas of any year always falls on the same day of the week as the 2d of January of that year, unless it be a leap-year, when it is the same week day as the 3d day of January of that year.

Easter is always the first Sunday after the full moon that happens on or next after March 21. It cannot occur earlier than March 22 or later than April 26 in any year.

B. *As adjective*: (See the compounds.)

calendar-clock, *s.* A clock which indicates not merely the hour and minute of the day, but also the day of the week and month, and in some cases even the year and the phases of the moon.

calendar-month, *s.* A month which, if it be January, has 31 days, if February, has 28 or 29, if March, has 31, &c.

"Surface [of corals] covered with *calicles*, or prominent polyp cells about a line in diameter."—*Dana: Man. of Geology*, § 1.

cāl-i-cō, ***cāl-i-cō**, ***cāl-i-cōe**, *s. & a.* [*Fr. calicot*.] So called because brought to Europe at first from Calicut, on the Malabar coast.]

A. As substantive:

Cotton cloths, having colored patterns printed on them. These cloths are coarser than muslin. In England calicoes include shirtings, &c., of a superior white cloth. Though early calico-printing is associated with India, yet other oriental nations were acquainted with the art, as were the Mexicans. It came from Asia into Europe. About the close of the seventeenth century Augsburg was one of its chief seats. A Protestant refugee from France, who had to leave that country on account of the revocation of the edict of Nantes, introduced it into England about 1696. It is now one of our great staple manufactures.

B. As adjective: (See the compounds.)

calico-printer, *s.* One whose business or occupation it is to print calicoes.

"Suppose an ingenious gentleman should write a poem of advice to a *calico-printer* . . ."—*Tatler*, No. 3.

calico-printing, *s.* The business or art of printing or impressing figured patterns on calicoes in mordants or colors.

"The first record of *calico-printing* as an art is that of Pliny."—*Ure: Dict. of Arts, &c.*

"Callipers measure the distance of any round, cylindrical, conical body; so that when workmen use them, they open the two points to their prescribed width, and turn so much stuff off the intended place, till the two points of the callipers fit just over their work."—*Moxon: Mechanical Exercises*.

cāl-lī-sau-rūs, *s.* [Gr. *kallos*, and *sauros* = a lizard, a saurian.]

Zoöl.: A genus of the great-hellied or frog-lizards, Agamidae. It contains the *C. draconoides* of Blainville.

cāl-līs-thēn-ic, **cāl-līs-thēn-ic**, *a.* [Gr. *kallisthenēs* = adorned with strength; *kallos* = beauty; *kalos* = beautiful, fine; *sthenos* = strength; Fr. *callisthenie*.] Pertaining to callisthenics.

cāl-līs-thēn-ics, **cāl-līs-thēn-ics**, *s. pl.* [Gr. *kallisthenēs* = adorned with strength; *kallos* = beauty; *sthenos* = strength.] The art or science of healthful exercise for the body and limbs, to promote gracefulness and strength.

cāl-līs-tūs, *s.* [Gr. *kallistos*, super. of *kalos* = beautiful.]

Entom.: A genus of coleopterous insects, belonging to the family Carabidae. It is a beautiful beetle of about a quarter of an inch long, with a greenish-black head, a reddish-yellow thorax, and yellow elytra with six reddish-black spots.

cāl-lī-thām-nī-ōn, *s.* [Gr. *kallos* = beauty; *thamnon* = a little hush; *thamnos* = a hush.]

Bot.: A genus of Ceramiaceae (Florideous Algæ), containing a large number of species, some common, many rare. The favellæ are naked, and the tetraspores are tetrahedrally arranged. (*Griff. & Henfrey*.)

cāl-lī-thrīx, *s.* [Gr. *kallos*, and *thrīx*, genit. *trichos* = hair.]

Zoöl.: The *Cercopithecus sabæus*, or Green Monkey, a species very common in menageries.

cāl-līt-rīch-ā-čē-æ, *s. pl.* [Eng. *callitriche*, and nom. fem. pl. suff. *-acæ*.]

Bot.: The Starworts, a genus of small aquatic plants, with simple entire opposite leaves and minute unisexual axillary flowers. The genus has been most frequently associated with other minute flowered aquatic plants, under Haloragaceae, but, more recently, it has been proposed, upon more plausible grounds, to consider it as a much-reduced aquatic Euphorbiaceae. *C. aquatica* is common in our ponds and still waters, and is found in most parts of the world.

cāl-līt-rīch-ē, *s.* [Gr. *kallos*, and *thrīx*, genit. *trichos* = hair.]

Bot.: Water Starwort, a genus of aquatic plants, the typical one of the order Callitrichaceae (q. v.).

cāl-lī-trīs, *s.* [Corrupted from Gr. *kallistos* = most beautiful, superlative of *kalos* = beautiful.]

Bot.: A genus of plants, natural order Coniferae. *Callitris quadrivalvis* is believed by Lindley to furnish sandarach. Consequently it is called the Sandarach-tree. It is from Barbary, where its hard and durable mahogany-like wood is extensively used in the construction of mosques.

cāl-ō-mā-nī-ā, *s.* [Gr. *kalos* = beautiful, and *mania* = madness.] *Pathol.*: Beauty madness; a monomania in which the patient imagines herself to be endowed with extraordinary grace and beauty.

cāl-lō-rhyn'-chūs, *s.* [Gr. *kallos* = beauty, *rhynchos* = a snout.]

Ichthyol.: A genus of fishes having the snout terminating in a fleshy lobe, which curves over in front of the mouth, and caudal fin surrounding the sides of the tail, which is pointed.

cāl-lōs-i-tŷ, *s.* [Fr. *callosité*; Lat. *callositas*.] A kind of swelling or hard skin on any part of the body; preternatural hardness of skin, such as is caused by hard labor.

"The surgeon ought to vary the diet of his patient, as he finds the fibers loosen too much, are too flaccid, and produce funguses; or as they harden, and produce callosities; in the first case, wine and spirituous liquors are useful, in the last hurtful."—*Arbuthnot: On Diet*.

cāl-lō-sō, *in compos.* [From Lat. *callosus* = with a hard skin; *callum* = hardened skin.] With a hard skin.

calloso-serrate, *a.*

Bot.: Having serratures which are also callosities. (*Treas. of Bot.*)

cāl-lo-sō-mā, *s.* [CALOSOMA.]

cāl-lō't, *s.* [CALOTTE.]

cāl-lōur, *a.* [CALLER, *a.*]

cāl-loūs, *a.* [Fr. *calleux* = thick or hard-skinned; Lat. *callosus*, from *callus*, *callum* = a hard skin; *calleo* = to have a hard or thick skin.]

1. *Lit.*: Having the skin or outer covering hardened; indurated.

"In progress of time, the ulcers became sinuous and callous, with induration of the glands."—*Wiseman*.

2. *Fig.*: Unfeeling; hardened in feeling.

"... duped into the belief that divine grace had touched the most false and callous of human hearts."—*Macaulay: Hist. Eng.*, ch. vi.

cāl-loūs-lŷ, *adv.* [Eng. *callous*; *-ly*.] In a callous manner. (*Lit. & fig.*)

cāl-loūs-nēss, *s.* [Eng. *callous*; *-ness*.]

1. *Lit.*: The state of having the skin or outer covering hardened; induration of the fibers.

"The oftener we use the organs of touching, the more of these scales are formed, and the skin becomes the thicker, and so a callousness grows upon it."—*Cheyene*.

2. *Fig.*: The state of being hardened in feeling; insensibility.

"... but there were instances when this seeming callousness struck the observer as being inexpressibly shocking."—*London Daily Telegraph*, Jan. 28, 1881.

†cāl-lōw, ***cal-u**, ***cal-ugh**, ***cal-ewe**, ***cal-ouwe**, *a.* [A. S. *calu*; Dut. *kaal*; Sw. *kal*; Ger. *kahl*; Sp., Port., & Ital. *calvo*, all = bald, from Lat. *calvus*.]

*1. Bald.

"A man of whos heed heeris fleten awei is *calu*."—*Wycliffe: Levit.*, xiii. 40. (*Purvey*.)

2. Unfledged, destitute of feathers.

"The egg, that soon Bursting with kindly rupture, forth disclosed Their callow young." *Milton: P. L.*, vii. 420.

"The callow throstle lispeeth."

Tennyson: Claribel.

cāl-lū-nā, *s.* [From Gr. *kallynō* = to make beautiful.]

Bot.: A genus of plants, order Ericaceae (Heaths). *Calluna vulgaris*, sometimes called the Ling, is the Common Heath or Heather. Ornamental varieties are sometimes grown in gardens, in which it forms an excellent edging for flower-pots. Its twigs are also made into brooms. The plant is astringent, and is employed both by laundrymen and dyers, and the flowers are very attractive to bees.

†cāl-lūs, *s.* [Lat. *callus* = a hard or thickened skin.]

1. *Med.*: Any unnatural hardening of the skin, arising from friction or pressure.

"A callus extending up the forehead."—*Pennant: Zoölogy*, ii. 494.

2. *Anat.*: An osseous formation serving to join the extremities of broken bones.

3. *Bot.*: A leathery or hardened thickening on a limited portion of an organ.

calm, **calme** (*l* silent), *a. & s.* [Fr. *calme*; Prov. *chaume* = a resting-time for flocks; O. Fr. *chaumer* = to be at rest; Low Lat. *cauma* = heat of the sun; Gr. *kauma* = great heat; *kaiō* = to burn; Sp., Port. & Ital. *calma*; Dut. *kalm*. The radical meaning is thus a rest during the heat of the day.]

A. As adjective:

1. *Of the elements*: Still, quiet, serene; undisturbed by any wind or other cause.

"As the wilde wode rage
Of winde maketh the see salvage,
And that was *calme* bringeth into waive,"
Gower: Conf. Amant., iii. 230.

"The seas waxed calm."

Shakesp.: Com. of Errors, i. 1.

2. *Of human beings*: Quiet in manner or temperament; unexcited in gesture or language.

"And, not dispraising whom we praised (therein
He was as *calm* as virtue), he began

Bot.: A genus of Liliacæ. *Calodracon Jacquinii*, sometimes called *Dracaena ferrea* and *terminalis*, is often seen in hothouses, where it is prized for its bright red leaves. Other species are cultivated for their variegated leaves.

cā-lā'-nās, s. [Gr. *kalos*=beautiful, and *oinas*, rock-pigeon.] A genus of pigeons containing but one species (*Caloenas nicobarica*), inhabiting India. It possesses plumage of brilliant colors.

***cāl-ōg'-raph-ŷ, s.** [CALIGRAPHY.]

cāl'-ō-mēl, s. [In Fr. *calomel*; Ger. *kalomel*; from Gr. *kalos*=good, beautiful, and *melas*=black; from the qualities and color of the Æthiops mineral, or black sulphuret of mercury, to which the name was originally applied.]

1. *Pharm.:* Mercury sub-chloride, Hg₂Cl₂. For its preparation see *mercury*. It is insoluble in water, and blacked by ammonia. It is used in liver complaints, and in any of the complaints for which mercury internally administered, is indicated. Care should be exercised in its use, as it is likely to induce salivation. It should be tested to see if it contains any mercuric chloride (corrosive sublimate), which is soluble in boiling water.

"He repeated lenient purgatives with *calomel*, once in three or four days."—*Wiseman: Surgery*.

2. *Min.:* A translucent or subtranslucent mineral, consisting of chlorine, 15.1, and mercury, 84.9=100. The hardness is 1.2, the specific gravity, 6.48, the luster adamantine, the color white gray or brown. It occurs in Germany, Austria, and Spain. (*Dana*.)

cāl-ō-phŷl'-lŭm, s. [From Gr. *kalos*=beautiful, and *phŷllum*, a Latinized form of Gr. *phŷllon*=a leaf. Named from the shining leaves, marked by fine transverse veins.]

Bot.: A genus of plants belonging to the order Clusiaceæ (Guttifers). Sepals, 2-4; petals, 4; stamina, many; style, 1; stigma, peltate-lobed. Flowers in racemes, sometimes unisexual. About twenty-five species are known, mostly from the eastern hemisphere, though a few are from the western world. *Calophyllum Calaba* is the Calaba-tree of the West Indies and of Brazil. [*CALABA.*] *C. inophyllum*, from the East Indian and Malayan regions, is a large tree sometimes 100 feet high. Its timber is used for masts and spars. A greenish-colored resin from the trunk constitutes a kind of tacamahac. Its seeds furnish a dark-green, thick, sweet-scented oil, used in India to burn and in medicine. *C. tomentosum*, of Ceylon, also furnishes timber and oil. *C. Tacamahaca*, on the Isle of Bourbon and Madagascar, and *C. brasiliense*, in Brazil, also yield resin. The fruits of *C. spurium*, of Malabar, and *C. edule* and *Madrano*, of South America, are eaten.

cāl-or'-ēs-çence, s. [Formed from Lat. *calor*=heat, on analogy of *calescence*, &c.] The change of invisible into visible heat.

"... for the new phenomena here described I have proposed the term *calorescence*."—*Tyndall: Frag. of Science*, 3d ed., viii. 8, p. 192.

cāl-ōr'-ŷc, s. & a. [In Fr. *calorique*; Lat. *calor*=warmth, heat, glow; from *caleo*=to be warm or hot.]

A. As subst.: The principle of heat, the natural agency by which heat is produced.

"*Caloric* expands all bodies."—*Henry*.

B. As adj.: Pertaining to the principle of heat or the natural agency which produces it.

caloric engine, s. The name given by Ericsson to his hot-air engine.

caloric paradox, s. The assumption by drops of water, when thrown on a hot metallic surface, of the spheroidal form, each liquid spheroid being surrounded by an atmosphere of its own vapor, which prevents it from being properly in contact with the metal. It is called also *Leidenfrost's phenomenon*.

†cāl-ōr'-ŷc'-ŷ-tŷ, s. [Lat. *calor* (genit. *caloris*)=heat; Eng. suff. -ity.] A faculty in living beings of developing heat to resist external cold. (*Dana*.)

cāl-ōr'-ŷ-dŭct, s. [Lat. *calor* (genit. *caloris*)=heat; *ductus*=a leading, a duct; *duco*=to lead.] A pipe or passage for conducting heat.

cāl'-ō-rie, s. [Fr.] The same as *calory* (q. v.).

†cāl-ōr'-ŷ-fēr, a. [Lat. *calor* (genit. *caloris*)=heat; *fero*=to bear, carry.] Carrying or conducting heat.

†cāl-ōr'-ŷf'-ŷ-ant, a.. [Lat. *calor* (genit. *caloris*)=heat; *facio* (pass. *fio*)=to make, cause.] Heating, calorificient.

cāl-ōr'-ŷf'-ŷc, *cāl-ōr'-ŷf'-ŷck, a. & s. [In Fr. *calorifique*; from Lat. *calorificus*; from *calor* (genit. *caloris*)=heat, *facio* (pass. *fio*)=to make, cause.]

A. As adj.: Having the property or quality of producing heat; heating.

"A *calorific* principle is either excited within the heated body, or transferred to it, through any medium, from some other."—*Grew*.

***B. As subst.:** An apparatus for conveying or conducting heat in houses, &c.; a hot-water apparatus.

***cāl-ōr'-ŷf'-ŷ-cāl, a.** [Eng. *calorific*; -al.] Calorific.

†cāl-ōr'-ŷf'-ŷ-cā'-tion, s. [Eng. *calorific*; -ation.] The production of heat, especially animal heat, in bodies.

cāl-ōr'-ŷf'-ŷc'-ŷ-ent, s. [Lat. *calor* (genit. *caloris*)=heat; *faciens* (genit. *facientis*), pr. par. of *facio*=to make.] Having the power or property of causing or producing heat; heating.

cāl-ōr'-ŷf'-ŷcs, s. [CALORIFIC.] The science which treats of appliances for producing or communicating heat.

cāl-ōr'-ŷm'-ē-tēr, s. [Fr. *calorimètre*; from Lat. *calor*=warmth, heat, and Gr. *metron*=a measure.] An instrument for measuring the quantity of heat

which a body parts with or absorbs when its temperature sinks or rises through a certain number of degrees, or when it changes its condition. An ice-calorimeter was invented by Lavoisier and Laplace. It is now superseded by the mercury-calorimeter of Favre and Silbermann, which is a very delicate instrument. It is essentially a thermometer with a very large bulb and a capillary tube. (See *Atkinson: Ganot's Physics; Heat*, ch. ix.)

Mercury-calorimeter.

cāl-ōr'-ŷ-mēt'-ric, a. [Eng. *calorimetr(y)*; -ic.] Of or pertaining to calorimetry.

cāl-ōr'-ŷm'-ēt-rŷ, s. [Lat. *calor*=warmth, heat, and Gr. *metron*=a measure.] The measurement of *caloric* in the way described under *Calorimeter* (q. v.). (See *Atkinson: Ganot's Physics; On Heat*, ch. ix. *Calorimetry*.)

cāl-ōr'-ŷ-mō'-tōr, s. [Lat. *calor* (genit. *caloris*)=heat, and *motor*=a mover; *moveo*=to move.] A galvanic instrument for evolving caloric.

***cā-lōr mor'-dīc-anŷ, s.** [Lat. *calor*=heat; *mordicans*=biting; *mordico*=to bite.]

Med.: An old term for the almost burning heat of the skin in ardent fevers, which causes an unpleasant sensation on the fingers after touching the patient. (*Hooper*.)

cāl-ō-rŷ, s. [Lat. *calor*=heat.]

Phys.: The unit of heat, being the quantity of heat necessary to raise the temperature of a kilogram of water one degree centigrade.

cāl-ō-sō'-mā, s. [Gr. *kalos*=beautiful, *sōma*=a body.]

Entom.: A genus of coleopterous insects of the family Carnivora and tribe Carabidæ

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camēl, hēr, thēre; pine, pīt, sīre, sīr, marīne; gō, pōt, cōr, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trŷ, Sŷrian. æ, œ = ē; ey = ā. qu = kw.

*cāl-ō-stig'-ma, s. [Gr. *kalos*=beautiful; *stigma*=a stigma.]

Bot.: A genus of Asclepiadaceæ, consisting of three species of climbing shrubs, natives of Brazil. The calyx is five-parted, corolla bell-shaped, and the elongated projecting stigma has a prominent apex.

cāl-ō-thām'-nūs, s. [From Gr. *kalos*=beautiful, and *thamnos*=a bush, a shrub.]

Bot.: A genus of Myrtaceæ. Various beautiful species grow in Australia.

cāl-ō-thrix, s. [Gr. *kalos*=beautiful; *thrix*=hair.]

Bot.: A genus of Oxillatoriæ (Confervoid Algæ), growing in tufts, the filaments forming a branched frond, by lying in apposition. *C. mirabilis* is a rare freshwater species found on mosses in small streams, æruginous green, growing blackish.

cāl-lōt'-rōp-is, s. [Gr. *kalos*=beautiful, and *tropis*=a keel, from the shape of the flower.]

Bot.: A genus of Asclepiads, consisting of three species, which form shrubs or small trees, and are natives of the tropics of Asia and Africa. Their flowers have a somewhat bell-shaped corolla, expanding into five divisions. *Calotropis gigantea*, the largest of the genus, forms a branching shrub or small tree about fifteen feet high, with a short trunk four or five inches in diameter. Its flowers are of a pretty rose-purple color. Cloth and paper have been made from the silky down of the seeds. The bark of the roots of several of the species furnishes the substance called *mudar*, which is used in India as a diaphoretic. The juice has been found very efficacious in the cure of elephantiasis, in syphilis, and anasarca. From the bark of the plant is made a substance called *Mudarine* (q. v.). The bark of the young branches also yields a valuable fiber. The leaves warmed and moistened with oil are applied as a dry fomentation in pains of the stomach; they are a valuable rubefacient. The root, reduced to powder, is given in India to horses. An intoxicating liquor, called *Bar*, is made from the *mudar* by the hillmen about Mahabuleswar, in the Western Ghats.

ca-lō'tte, ca-lō't'e, *cal-lōt', s. [Fr. *calotte* = a cap.]

I. Ordinary Language:

*1. A cap or coif worn by ecclesiastics in France.

"We
That tread the path of public businesses
Know what a tacit shrug is, or a shrink,
The wearing the callot, the politic hood,
And twenty other parerga."

B. Jonson: *Magn. Lady*, i.

*2. Anything shaped like a cap; the hilt of a sword.

II. Technically:

1. *Arch.*: A concavity in the form of a cap or niche, lathed and plastered, serving to diminish the height of a chapel, alcove, or cabinet, which otherwise would appear too high for the breadth. (*Gwilt*.)

2. *Math.*: The section of a sphere having a circle for its base.

cāl-ō-type, s. [From Gr. *kalos* = beautiful, and *typos* = a blow; an impression.]

Photog.: A process invented by Fox Talbot, by which paper saturated with iodide of silver is exposed to the action of light, the latent image being subsequently developed and fixed by hyposulphite of soda.

*cal'-ouwe, a. [CALLOW.]

†cā-lōy'-ērs, *cā-lōg'-ēr-i, s. pl. [Fr. *caloyer*; from Mod. Gr. *kalogeros* = a monk; Gr. *kalos* = beautiful, good; *geron*, M. Gr. *geros* = an old man.] *Ch. Hist.*: Monks of the Greek Church, who resided chiefly on Mount Athos, and were celebrated for their extreme austerity.

"Here dwells the caloyer, nor rude is he,
Nor niggard of his cheer,"
Byron: *Childe Harold's Pilgrimage*, ii. 49.

cāl-p, s. [Etym. doubtful. Probably derived from Wel. *calch* = lime.]

Chem.: A sub-species of carbonate of lime of a bluish-black color with a streak of white; it is intermediate between compact limestone and marl.

cāl'-pāc, s. (For def., see quotation.)

"The calpac is the solid cap or center part of the head dress; the shawl is wound round it, and forms the turban."—Byron: *Note in the Giaour*.

"Angel of Death! 'tis Hassan's cloven crest!
His calpac rent—his caftan red."

calve (l silent), v. i. & t. [Eng. *calv*; Dut. *kalven*; Dan. *kalve*; Sw. *kalfva*; Ger. *kalben*.]

A. *Intransitive*:

1. *Lit.*: To bring forth a calf; to bear young. (Said of a cow.)

"Their bull gendereth, and faileth not; their cow calveth, and casteth not her calf."—*Job* xxi. 10.

¶ Applied also to other animals.

"Knowest thou the time when the wild goats of the rock bring forth? or canst thou mark when the hinds do calve?"—*Job* xxxix. 1.

*2. *Figuratively*:

(1) To bring forth, bear. (Applied even to inanimate things.)

"The grassy clods now calv'd; now half appear'd
The tawny lion, pawing to get free
His hinder parts."

Milton: *P. L.*, bk. vii.

(2) Of icebergs: To break off from a glacier which has reached deep water.

*B. *Trans.*: To bear; to bring forth. (Applied contemptuously or reproachfully to human beings.)

"I would they were barbarians, as they are,
Though in Rome litter'd; not Romans, as they are not,
Though calv'd in the porch o' th' capital."

Shakesp.: *Coriol.*, iii. 1.

cāl'-vēr, cal-vur, v. t. & i. [Etymology doubtful. Wedgwood suggests Scotch *callour* or *callar*=fresh.]

bōil, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, ðhis; sin, aş; expect, Xenophon, exist. ph = f. -cian, -tian = şan. -tion, -sion = şhũn; -tion, -şion = zhũn. -tious, -cious, -sious = şhũş. -ble, -dle, &c. = bēl, dēl.

A. Trans.: To cut salmon into thin slices, while fresh, and then pickle these.

"Calvur as samoon, or othyr fysshe."—*Prompt. Parv.*

"My foot-boy shall eat pheasants, calvered salmons."—*Ben Jonson: Alchemist*, ii. 1.

"Provide me then chines fried, and the salmon calver'd."—*Killigrew: Parson's Wedding* (1664).

B. Intrans.: To bear being so sliced and pickled.

"His flesh [the grayling's], even in his worst season, is so firm, and will so easily calver, that in plain truth he is very good meat at all times."—*Cotton: Complete Angler*.

calv'-ēr (*l* silent), *s.* [Eng. *calve*, *v.*; and suff. -*er*.] A cow with calf. (*Scotch*.)

cāl'-vēr-ed, *pa. par.* or *a.* [CALVER, *v.*] Sliced and pickled.

¶ Calver'd salmon is a dainty celebrated by all our old dramatists. "May's Accomplished Cook," if that be sufficient authority, gives an ample receipt for preparing it. It is to be cut in slices, scalded with wine and water and salt, then boiled up in white-wine vinegar, and set by to cool; and so kept, to be eaten hot or cold (p. 354). It now means, in the fish trade, only crimped salmon. (*Nares*.)

"Great lords, sometimes,
For a change leave calvered salmon, and eat sprats."
Massinger: Guardian, iv. 2.

"... but even Prince George, who cared as much for the dignity of his birth as he was capable of caring for any thing but claret and calvered salmon, submitted to be Mr. Morley."—*Macaulay: Hist. Eng.*, ch. xv.

calves-tongue, *s.*

Arch.: A sort of molding, usually made at the caps and bases of round pillars, to taper or hance the round part to the square.

cāl'-ville, *s.* [French, from Lat. *calvus* = bald, smooth-skinned.] A kind of apple.

calv'-ing (*l* silent), *pr. par., a. & s.* [CALVE, *v. t.*]

A. & B. As pr. par. & particip. adj.: (See the verb.)

C. As substantive:

1. **Ord. Lang.:** The act of giving birth to a calf.

"I heard of late of a cow in Warwickshire, which in six yeeres had sixteen calves; that is, foure at a once in three calvings, and twice twins . . ."—*Holinshead: Descript. of Engl.*, bk. iii., ch. i.

2. **Naut.:**

Of icebergs: The act of breaking or the state of being broken off a glacier when the latter reaches deep water. Glaciers tend to form on mountain tops when the temperature is low enough for the purpose. Then they gradually descend, new glacial material behind pressing them down. On reaching the ocean they are pushed into it, and finally they calve or give birth to icebergs, which have an independent existence of their own.

Cāl'-vin-ism, *s.* [Fr. *calvinisme*. From John Calvin, the celebrated reformer, born at Noyon, in Picardy, July 10, 1509; died May 27, 1564. For further details see definition.]

1. **Theol.:** The tenets of the above-mentioned John Calvin. Sometimes the term Calvinism comprehends his views regarding both theological doctrine and ecclesiastical polity; at others it is limited to the former, and specially to his views on the doctrines of grace. These are sometimes called the five points of Calvinism, or, more briefly, the five points; but this latter curt appellation is not sufficiently specific, for the rival system of Arminianism was also presented by the Remonstrants at the Synod of Dort in five points. Those of Calvinism are the following: 1. Original Sin; 2. Total Depravity; 3. Election, or Predestination; 4. Effectual Calling; 5. Final Perseverance of the Saints. (For the rival Arminian five points see ARMINIAN.) Augustine, Bishop of Hippo, who was born in 354, and died in 430, held theological views essentially the same as those afterward promulgated by Calvin. In addition to what may be called the doctrines of grace, Calvin held the spiritual presence of Christ in the Holy Eucharist, but not the doctrine of consubstantiation. He was thus essentially Zwinglian, and not Lutheran.

2. **Eccles.:** Calvin's views of Church government were essentially what are now called Presbyterian. He held also that the Church should be spiritually independent of the State, but was willing that the discipline of the Church should be carried out by the civil power. This last opinion, followed to its logical conclusion, involved him in heavy

responsibility for the death of his Socinian antagonist Servetus, the capital punishment of whom for alleged heresy was approved of not merely by Calvin, but by the other reformers, not excepting the gentle Melancthon. No one in those days seems to have clearly understood religious liberty.

3. **Ch. Hist.:** The work which first made this system known to the world was Calvin's *Institutes of the Christian Religion*, published in 1536. In August of the same year he visited Geneva, and, at the earnest request of Farel, its leading reformer, made it his residence. In 1538 both were expelled from the city, when Calvin, going to Strasburg, originated the French church there on the model which he deemed scriptural. In 1541 he was invited back to Geneva, and returning to it was the leading spirit there till his death, in 1564. Various Protestant churches adopted Calvin's theological views with his ecclesiastical polity; thus Knox carried both of these to Scotland, where the first Presbyterian General Assembly was held in 1560.

Bishop Burnet states that the 17th article of the Church of England is framed according to St. Augustine's doctrine, which, as stated, is essentially Calvinistic. The early reformers of the English Church, mostly held his views of the doctrines of grace, which prevailed to the end of Queen Elizabeth's reign. Afterward they imperceptibly declined. When the rival system of Arminius was brought to trial at the Synod of Dort, in Holland, in 1618, the English clerical representatives gave Calvinistic votes, notwithstanding which Arminianism took deep root in the English as in various other churches. Archbishop Laud was its warm friend and advocate, as were the High Church party generally, while Low Churchmen continued Calvinistic, a generalization which still remains correct. The ecclesiastical polity of Calvin was embraced by the Puritan party, but never had a majority of the English people in its favor, and an attempt in the early days of the Long Parliament to set it up, though under the control of the civil government, was successful only to a limited extent, and for a brief period of time. Most of the clergymen whom the passing of the Act of Uniformity, in 1662, dis severed from the Church, were Calvinists.

Of the two great English revivalists of the eighteenth century, Whitfield was Calvinistic [CALVINISTIC METHODISTS], and Wesley Arminian [WESLEYAN].

cāl'-vin-ist, *s.* [Fr. *calviniste*.] A follower of Calvin; one who adopts the theological teaching of Calvinism.

"The Calvinist is tempted to a false security, and sloth; and the Arminian may be tempted to trust too much to himself, and too little to God."—*Burnet on the Articles*, Art. 17.

cāl'-vin-is-tic, ***cāl'-vin-is-tick**, ***cāl'-vin-is-tī-cal**, *a.* [Eng. *calvinist*; -*ic*, -*ical*.] Pertaining to Calvin or Calvinism.

"... the petty states and republics abroad, where the calvinistic discipline was adopted."—*Warton: Hist. of Eng. Poetry*, ii. 458.

Calvinistic Methodists, *s. pl.*

Ch. Hist. & Ecclesiol.: A section of the Methodists, distinguished by their Calvinistic sentiments from the ordinary Wesleyans, who are Arminian. Wesley and Whitfield, the colleagues in the great evangelistic movement which did so much spiritually and morally to regenerate England in the 18th century, differed with regard to the doctrines of grace, Wesley being Arminian, and Whitfield Calvinistic; the latter revival preacher may be looked on as the father and founder of Calvinistic Methodism. Other names, and specially that of Mr. Howell Harries, of Trevecca, should be mentioned in connection with it. In its distinctive form it dates from 1725, but did not completely sever its connection with the English Church till 1810. In government it is now Presbyterian. Its great seat is Wales.

cāl'-vin-ize, *v. t.* [Eng. *calvin*; -*ize*.] To convert to Calvinism.

cāl'-ish (*l* silent), *a.* [Eng. *calf*; -*ish*.]

1. **Lit.:** Pertaining to or like a calf.

2. **Fig.:** Silly, stupid.

"He was holden unworthy to be made a parish-priest, as having made a calvish answer."—*World of Wonders* (1608), p. 240.

"You seem like to Waltham's calf, that went nine miles to suck a cow; and when he came thither, the cow proved a bull; perhaps in your calvish meditation you thought, for your pains in advertising the picture-mother, to have sucked her dug."—*Sheldon: Miracles of Antichrist*, p. 141.

cāl'-vit'-i-ēs, *s.* [Latin, from *calvus* = bald.]

Physiol.: The term for the want or loss of hair, more particularly on the sinciput; baldness.

cāl'-vīt'-y, *s.* [Fr. *calvitie*; Lat. *calvities*.] Baldness; absence of hair. [CALVITIES.]

calx, *s.* [Lat. *calx*, genit. *calcis*.]

1. **Glass-making:** Broken or refuse glass, which is restored to the pots.

2. **Chem. & Min.:** A kind of ashes or fine powder, remaining from metals, minerals, &c., after they have undergone calcination by the violent action of fire, and have lost all moisture.

"Gold, that is more dense than lead, resists peremptorily all the dividing power of fire; and will not be reduced into a calx, or lime, by such operation as reduces lead into it."—*Digby*.

Calx viva: Quicklime, or lime in its most caustic state.

Calx extincta: Slacked lime, or lime that has been quenched with water after it has been burnt.

Calcis aqua, or liquor: Limewater; a solution of lime in water.

cāl'-y-cānth-ā'-cē-æ, *s. pl.* [From Mod. Lat. *calycanthus*; and fem. pl. suff. -*acēæ*.]

Bot.: An order of Rosal Exogens consisting of two genera. The species, which are shrubs, bear delightfully fragrant flowers, thrive in open loamy soil, and are propagated by layers.

cāl'-y-cān'-thēm-y, *s.* [From Gr. *kalyx*, genit. *kalykos* = a calyx, and *anthemoeis* = flowery.] The conversion wholly or partially of sepals into petals. (*R. Brown*, 1874.)

cāl'-y-cānth's, *s. pl.* [CALYCANTHUS.]

Bot.: Lindley's English name for the Calycanthaceæ.

cāl'-y-cānth'-ūs, *s.* [Gr. *kalyx* = a cup, a calyx, and *anthos* = a flower.]

Bot.: A genus of plants, the typical one of the family Calycanthaceæ. It consists of shrubs with opposite, oval, or ovate-lanceolate entire leaves, generally rough on the surface. There are but two species. *C. floridus* (Carolina All Spice) is a native of the Carolinas; *C. abai*, or *Nobai* (Japan All Spice), a native of Japan.

cāl'-y-c-ēr-ā'-cē-æ, *s. pl.* [*Calycer* (a), and fem. pl. suffix -*acēæ*.]

Bot.: A natural order of gamopetalous calycifloral dicotyledons included in Lindley's Campanal alliance. Herbs with alternate leaves, without stipules, and with flowers collected in beads; calyx superior, of five unequal divisions; corolla regular, funnel-shaped, with a five-divided limb; stamens, five thin filaments united, as well as the lower part of the anthers; ovary one-celled, style smooth, stigma capitate. The order occupies an intermediate space between *Compositæ* and *Dipsacaceæ*, and comprises about twenty species, all natives of South America.

cāl'-y-c-ēr-ā, *s.* [Gr. *kalos* = beautiful; *keras* = a horn.]

Bot.: A genus of plants, the typical one of the order Calyceraceæ. They are small annual or perennial herbs, from four to eight inches high, but possess little interest for any but the botanist.

cāl'-y-cēs, *s. pl.* [CALYX.]

cāl'-y-c-ī-flō'-ræ, *s. pl.* [Lat. *calyx* (genit. *calycis*), and *flos* (genit. *floris*) = a flower.]

Bot.: A sub-class of exogenous or dicotyledonous plants, characterized by having both calyx and corolla, petals separate and stamens attached to the calyx.

†**cāl'-y-c-ī-flō'-roūs**, *a.* [CALYCIFLORÆ.]

Bot.: Of or pertaining to the Calycifloræ.

cāl'-y-c-ī-form, *a.* [Lat. *calyx* (genit. *calycis*), *forma* = form, shape.]

Bot.: In the form of a calyx; an epithet applied to the involucre when it has the appearance of a calyx.

cāl'-y-c-īn-al, **cāl'-y-c-īne**, *a.* [Lat. *calyx* (genit. *calycis*) = a case, a bud; Gr. *kalyx* = a seed-vessel, a calyx; suff. -*al*.]

Bot.: Of or belonging to a calyx; in the form of a calyx; an epithet applied to the scales or thorns which are on the calyx.

cāl'-y-c-ī-ūm, *s.* [Gr. *kalykion* = a little cup, from the appearance of the reproductive organs.]

Bot.: A genus of Lichens belonging to the tribe Coniothalmææ.

†**cāl'-y-cle** (*cle* as *cēl*), *s.* [Lat. *calyculus*, dim. of *calyx* (q. v.).]

Bot.: A row of small leaflets placed at the base of the calyx on the outside. A partial involucre containing but one, or perhaps two flowers. [CALYCULE.]

†**cāl'-y-cōld**, *a.* [From Gr. *kalyx* = a calyx, and *eidos* = form.]

Bot.: Calyx like.

†**cāl'-y-cōld'-ē-ōūs**, *a.* [Gr. *kalyx* = a calyx; *eidos* = form, appearance.]

Bot.: Having the form or appearance of a calyx.

cāl'-y-c-ō-mīs, *s.* [Gr. *kalos* = beautiful; *komē* = hair.]

Bot.: A genus of Cunoniaceæ, now called *Acrophyllum* (q. v.).

cāl'-y-cōph-ōr'-i-dæ, *s. pl.* [From Gr. *kalyx*, genit. *kalykos* = a cup, and *phoreō* = to bear, to carry.]

fāte, fāt, fāre, amidst, whāt, fāl, father; wē, wēt, hēre, camēl, hēr, thēre; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō. sōn; mūte, cūb, cūre, unite, cūr, rūle, fūll; trȳ, Sȳrian. æ, œ = ē; ey = ā. qu = kw.

1. *Zoöl.*: An order of Siphonophora (Oceanic Hydrozoa). They are so called because their swimming organs are cup-shaped. Example, Diphyes.

2. *Palæont.*: Being soft-bodied, they have left no traces of themselves which have yet been detected in the rocks.

cāl-ŷc'-u-lāte, cāl-ŷ-cled, a. [Lat. *calyculus*, dim. of *calyx* (q. v.)] [CALICULATE.]

ŷcāl'-ŷ-cūle, s. [Lat. *calyculus*, dim. of *calyx* (q. v.)].

Bot.: A little calyx. A bundle or row of small bracts, which forms a verticil immediately beneath the calyx, and resembling an exterior calyx; example, the Pink. In the *Potentilla* the calycul is formed by the stipules united two by two, which are a dependence of the sepals.

cāl-ŷm'-ē-nē, s. [Gr. *kalymma*=a veil, a covering; *kalyptō*=to veil, cover.]

Palæont.: A genus of fossil Trilobites, occurring in the Silurian rocks. They appear to have possessed the power of rolling themselves up into a ball, as some recent allied genera do, for the purpose either of safety or of concealment. *Calymene Blumenbachii* is the well-known Dudley Trilobite.

cāl-ŷ-mēn'-ī-dæ, s. pl. [From Mod. Lat. *calymene* (q. v.), and pl. suff. *-idæ*.]

Palæont.: A family of Trilobites. [CALYMENE.]

cāl-ŷ-ōn, s. [CALION.]

*1. *Ord. Lang.*: A hard, round stone. (*Prompt. Parv.*)

2. *Masonry*: Flint or pebble stone used in building walls.

cāl-ŷ-phŷ-ōm-ŷ, s. [From Gr. *kalyx*, genit. *kalykos*=a calyx, and *phŷō*=to bring forth, to produce.]

Bot.: Abnormal adhesion of the calyx, to the corolla. (*R. Brown*, 1874.)

cāl-ŷp'-sō, Cāl-ŷp'-sō, s. [Gr. *kalypsis*=a covering, *kalyptō*=to cover, conceal.]

1. *Mythol.*: The goddess of silence, daughter of Oceanus and Tethys, and Queen of Ogyia, who tried by every art to detain Ulysses on his way home from Troy.

2. *Astron.*: An asteroid, the fifty-third found. It was discovered by the astronomer Luther, on the 4th April, 1858.

3. *Bot.*: A genus of Orchids, found in this country. *Calypso borealis* is the most beautiful of northern orchids. It is a tuberous terrestrial plant, with one leaf and one flower only. The rose-colored flower appears at the end of a slender sheathed stem. The leaf is thin, many nerved, either ovate or cordate. (*Treas of Bot.*)

cāl-ŷp'-tēr, s. [CALYPTRA.]

cāl-ŷp'-tō-blās'-tīc, s. [From Gr. *kalyptos*=covered, and *blastos*=a sprout, shoot, or sucker.]

Zoöl.: Pertaining to those Hydrozoa in which the nutritive or generative buds are provided with an external protective receptacle. (*Allman*.)

calyptoblastic hydroids, s. pl.

Zoöl.: The hydroids above described. It comprehends the Sertularians and the Campanularians.

cāl-ŷp'-tō-lite, s. [Gr. *kalyptō*=to hide, conceal; suff. *-lite* (*Min.*)=Gr. *lithos*=a stone.]

Min.: The same as ZIRCON (q. v.).

cāl-ŷp'-tō-rhŷn'-chūs, s. [Gr. *kalyptō*=to hide; *rhynchos*=a beak, or snout.]

Ornith.: A genus of birds of the Psittacidae or Parrot family.

cāl-ŷp'-trā, s. [Gr. *kalyptra*; from *kalyptō*=to hide, cover.]

Botany:

1. *Gen.*: A hood-like body connected in some plants with the organs of fructification. It exists in some flowering plants and in mosses. Used specially for—

(1) A number of bracts united to cover the flower. Example, Pileanthus.

(2) A lid or operculum to the stamens. It may be made of consolidated sepals or petals. Examples: *Eucalyptus*, *Eudemia*.

2. *Spec.*: The hood of an urn-moss, covering the top of the theca like a cup.

cāl-ŷp'-trā'-a, s. [Lat. *calyptra*; Gr. *kalyptra*=a hood, covering.]

Zoöl.: A genus of Gasteropods, furnished with a patelliform shell, to the cavity of which a smaller conical one adheres, like a cup in a saucer. It is the typical genus of the family Calyptræidae. The species are called Cup-and-Saucer Limpets. Tate estimates the known recent species at fifty and the fossil at thirty one, the latter from the chalk, if not from the carboniferous formation on till now. They are called Bonnet Limpets.

cāl-ŷp'-trā'-ī-dæ, s. pl. [From *calyptræ*(a), and fem. pl. suff. *-idæ*.]

Zoöl.: A family of Gasteropods comprising, among other genera, *Calyptræa* and *Crepidula* of Lamarck.

cāl-ŷp'-trān'-thēs, s. [From Gr. *kalyptra*=a cover, as of a quiver (?), a woman's veil, and *anthos*=a flower.]

Bot.: A genus of Myrtaceæ. The species are American. The flowers of *Calyptranthes aromatica* might be used for cloves.

cāl-ŷp'-trāte, a. [Lat. *calyptra*; Gr. *kalyptra*; and Eng. suff. *-ate*.]

Botany:

1. *Gen.*: Having a veil or covering lik a calyptra or hood.

"Such a calx is operculate or calyptrate."—*Balfour: Botany*, p. 184.

2. *Of a calyx*: Bursting on one side at the period of falling. Example, *Eschscholtzia*. (*Lindley*.)

cāl-ŷp'-trī-form, a. [Lat. *calyptra*=a hood; *forma*=form.]

Bot.: Having the form or appearance of a calyptra or hood.

cā-lŷ-sāç'-çi-ōn, s. [From Gr. *kalyx*=a calyx, and *sakkion*=a small bag.]

Bot.: A genus of plants, order Clusiaceæ (Guttifers). Only known species, *Calysaccion longifolium*. It is from India and China. The flower buds are very fragrant. They are used in India for dyeing silk yellow and orange.

cāl-ŷs-tē'-gi-a, s. [Gr. *kalyx*=a calyx, and *stegē*=a covering.]

Bot.: A genus of plants of the order Convolvulaceæ, containing about twelve or fourteen species.

cā-lŷx, s. [Lat. *calyx*; Gr. *kalyx*, strictly=any covering, but used only of flowers and fruits, i. e. (1) a seed vessel; (2) the calyx or cup of a flower; from *kalyptō*=to cover, to conceal.]

1. *Bot.*: The outermost integument of a flower, consisting of several verticillate leaves, either united by their margins or distinct, usually of a green color and of a ruder and less delicate texture than the corolla. (*Link, Lindley, &c.*) When only one series of floral integuments is present, that single one is considered as a calyx, and not as a corolla. The divisions of a calyx are called *sepals*. A *superior* or *adherent* calyx is one not able to be separated from the ovary; an *inferior* or *free* one is actually separate. A *calyceolate calyx* is one surrounded at the base by a ring of bracts. The term *æstivation* (q. v.) may be used of a calyx as well as of a complete flower. A calyx is not the same as a *perianth*, the latter being a calyx and corolla combined, as in a tulip or an orchid, and not a solitary calyx. A *common calyx* is called an *involute* (q. v.).

2. *Zoöl.*: The cup-shaped body of a Crinoid or that of a Torticella.

***cāl'-zōonŷ, *cāl'-sōundŷ, s.** [O. Fr. *calçons*; Fr. *caleçon, caleçons*; Ital. *calzoni*; Sp. *calzones*, augment. of Ital. *calzo*; Sp. *calzas*; Fr. *chausse*=hose, stockings, from Lat. *calceus*=a shoe, *calx*=a heel.] Drawers. (*Sir T. Herbert*.)

"The next that they weare is a smocke of callico, with ample sleeves, much longer than their armes; under this, a paire of calsoundŷ of the same, which reach to their ancles."—*Sandys: Travels*, p. 63.

cām, *kām, *kamme, a., adv. & s. [Gael, Ir., & Wel. *cam*=crooked. [CAMBER.]]

A. As adjective:

1. *Lit.*: Crooked, curved.

2. *Fig.*: Crooked in temper, perverse, cross, peevish. (*Provincial*.)

**B. As adv.*: Wrong, out of the right course.

"This is clean *kam*."

Merely awry. *Shakesp.: Coriolanus*, iii. 1.

"Against the wooll, the wrong way, cleane contrary, quite *kamme*."—*Cotgrave*.

C. As substantive:

1. The projecting part of a wheel or curved plate, so shaped as to cause an eccentric or alternating motion of any required velocity or direction in another piece pressing against it.

2. A ridge or mound of earth. (*Provincial*.) (*Wright*.)

cam-ball, s. & a.

¶ *Cam-ball valve*: A valve acted upon by a cam on the axis of a ball-lever, so that, as the float in a cistern, the cam may press against the stem of the valve and close it, preventing the ingress of water.

cam-gear, s. & a.

¶ *Cam-gear wheeling*:

Mach.: A certain arrangement of gearing.

cam-shaft, s.

Mach.: A shaft having cams or wipers for raising the pestles of stamping-mills. It is called also a *tumbling-shaft* or *wallower*. (*Knight*.)

cam-wheel, s.

Mach.: A wheel so constructed as to move eccentrically, and cause an alternating or reciprocating motion in another part of the machine.

cām-ar-a (1), s. [From Gr. *kamara*=anything with an arched cover, a vaulted chamber.]

1. *Bot.*: A carpel.

2. *Comm.*: The hard, durable timber of *Dipteryx odorata*, a leguminous plant, a native of Guiana. (*Treas. of Bot.*)

cām-ar-a (2), s. [Native Guiana name.] The same as Ackawar Nutmeg. It is produced by *Acrodididium camara*, a species of the Laurel order. It is considered in Guiana to be one of the most efficacious remedies in colic, diarrhœa, and dysentery. It is a powerful astringent, and has been used with great success in the treatment of mucous discharges.

***cām-a-rīl'-la, s.** [Sp. *camarilla*=a little room, dim. of *camara*=a chamber.]

1. The audience chamber or private room of a king.

2. A band or company of conspirators; a cabal, a clique. (*Wright*.)

cām-ar-lēn'-go, s. [Sp. *camarlengo*=a chamberlain (q. v.).] A high functionary chosen when the decease of a Pope is expected not to be far distant, to govern the church during the interregnum, and to see that irregular practices and all foreign or personal influence shall be excluded from the election.

"If the *Camarlengo* has only moderate abilities, he is greater than the Pope, for he can make the Pope."—*London Times*, September 28, 1877.

ca-mās'-sī-a, s. [From North American Indian *quamash*, the name of the plant.]

Bot.: A genus of plants, order Liliaceæ. The bulbs of *Camassia esculenta* are eaten by the North American Indians.

cām'-a-yeū, cām'-a-ŷ-eū, s. [CAMEO.]

1. [CAMEO.]

2. *Painting*: A term used where there is only one color, and where the lights and shadows are of gold, wrought on a golden or azure ground. This kind of work is chiefly used to represent bassi relievi.

camb (1), s. [COMB.]

camb (2), s. [CAMBIUM.]

cām'-bāyeŷ, s. pl. [From Cambay, formerly an important seaport, on the gulf of the same name in India, lat. 22° 21' N., long. 72° 48' E.]

Fabrics: Cotton cloth made in Bengal, Madras, and other parts of India. (*Knight*.)

cām'-bēr (1), s. [O. Fr. *cambre*=crooked. Cf. *cam, a.*]

1. (See the example.)

"*Camber*, a piece of timber cut arching, so as a weight considerable being set upon it, it may in length of time be induced to a straight."—*Mox. Mech. Exer.*

2. *Arch.*: An arch on the top of an aperture or on the top of a beam.

3. *Nautical*:

(1) The curve of a ship's plank.

(2) The part of a dockyard where cambering is performed.

(3) A small dock in navy yards, for the convenience of loading and discharging timber.

camber-beam, s.

Arch.: That which forms a curved line on each side from the middle of its length. All beams should, to some degree, be cambered, if possible; but the

bōil, bōy; pōut, jōw1; cat, çell, chorus, çhin, bench; go, gem; thin, this; sin, aŷ; expect, Xēnophon, exīst. ph = f. -cian, -tian = şan. -tion, -sion = şūn; -tion, -şion = zhūn. -tious, -cious, -sious = şūs. -ble, -dle, &c. = be1, de1.

cambered beam is used in flats and church platforms, wherein, after being covered with boards, these are covered with lead, for the purpose of discharging the rain-water.

camber-keeled, *a.* Having the keel slightly arched upward in the middle of the length, but not actually hogged.

camber-slip, *s.*

Bricklaying: A strip of wood with one edge curved equal to a rise of one inch in six feet. It is used for sinking the soffit lines of straight arches to give them a slight rise that they may settle straight.

***camber-maid**, *s.* A chambermaid.

cām'-bēr, *v. t. & i.* [CAMBER, *s.*]

1. *Trans.*: To make a beam camberwise or arching.

2. *Intrans.*: To bend or curve camberwise.

cām'-bēred, *pa. par. & a.* [CAMBER, *s.*] Arched, curved. (*Totten.*)

cām'-bēr-ing, *pr. par., a. & s.* [CAMBER, *v.*]

A. & B. *As pr. par. & particip. adj.*: (See the verb.)

C. *As subst.*: The act of making a beam cambered or arched.

cām'-bī-āl, *a.* [Low Lat. *cambialis*; from *cambio*=to exchange.] Pertaining or relating to exchange.

cām'-bī-form, *a.* [From Lat. *cambium* (CAMP), and *forma*=form, shape.]

¶ **Cambiform tissue**:

Bot. Physiol.: Narrow, thin-walled, elongated succulent cells often found in connection with sieve tubes in the structure of plants. They are called also permanent cambium. (*Thomé.*)

†cām'-bīst, *s.* [Fr. *cambeste*; Sp. & Ital. *cambista*; from Lat. *cambio*=to exchange.] One skilled in the science of exchange; a bill-holder; a money-changer.

"... *camdist* is not only a word of legitimate derivation, but is also a term much wanted in the English language, as there is none other to express the same meaning except Exchange, which seems too general and indefinite."—*Kelly: Universal Cambist* (pref. 1811).

cām'-bīs-trý, *s.* [Eng. *camdist*; -ry.] The science of exchange of moneys, &c.

cām'-bī-ūm, *s.* [Lat. *cambium*=exchange, bartering; from *cambio*=to exchange, barter.]

Bot.: The viscid substance which appears, in the spring, between the wood and bark of exogenous trees when the new wood is forming, and again disappears as soon as the wood is completely formed. It re-appears whenever the plant is again called into growth, as at midsummer, in those species which shoot twice a year.

cambium-sheath, *s.*

Bot. Physiol.: An annular layer of formative tissue separating the very young cortex of a plant from the subjacent tissue. (*Thomé.*)

***cām'-blēt**, *s.* [CAMLET.]

cām-bō'ge, *s.* [GAMBOGE.]

cām-bō'-gī-ā, *s.* [Cambodja, or Cambodia, in the Eastern Peninsula, from which much of the gamboge of commerce is obtained.]

Bot.: An old genus of plants, order Clusiaceæ (*Guttifers*). It is now merged in *GARCINIA* (q. v.).

***cām'-bōk**, *s.* [CAMMOCK.]

cām-bōo'se, *s.* [CABOOSE.]

cām-brā'-sīne, *s.* [CAMBRIC.] A sort of fine linen resembling cambric, made in Egypt.

Cām'-brāy, †**cām'-brāi**, *s. & a.* [Altered from *Cambracum*, the Roman name of the city.]

A. *As subst.*: A city of France, department of the Nord, lat. 50° 10' N. and long. 3° 14' E.

B. *As adj.*: Brought from or in any other way pertaining to the city described under A.

Cambray-stone, *s.*

Min.: A name for Moss Agate, or Mocha-stone.

cām'-brēl, ***cām'-mēr-ell**, *s.* [CAMBER.] A piece of bent wood, by which butchers hang up carcasses of slaughtered animals.

Cām'-brī-ān, *a. & s.* [Lat. *Cambria*=Wales.]

A. *As adjective*:

I. *Ord. Lang.*: Of or belonging to Wales.

"Him answer'd then his loving mate and true,
But more discreet than he, a *Cambrian* ewe."

Cowper: The Needless Alarm.

II. *Geol.*: Of or belonging to the series of rocks described under B. II. (See the terms *Cambrian formation*, *group*, or *system*.)

B. *As substantive*:

*I. *Ord. Lang.*: A native of Wales.

II. *Geology*:

1. *Formerly*: In 1835 Sedgwick gave this name to some much-disturbed and apparently unfossiliferous old strata, until then known as "Grauwacke," which he had traced out in Cumberland and North Wales. Just previously, Murchison had fixed the term "Silurian" to a series of fossiliferous deposits in Shropshire and Wales, known by him afterward as the Ludlow, Wenlock, Llandovery, Caradoc, Llandeilo, and Lingula groups. These were all regarded as younger than, and lying above, Sedgwick's "Cambrian" series; the position, however, of the Bala limestone (equivalent to the "Caradoc Sandstone" of Shropshire) was mistaken, and consequently the boundary-line provisionally fixed by the two observers was misplaced. Fossils characteristic of the "Silurian" were afterward found in strata thus placed in the "Cambrian" series, and hence the latter name became limited to the lowest beds. This nomenclature was generally adopted, until Sedgwick, renewing his work, criticized it. A better knowledge of the fossils has of late modified the classification, as given below.

2. *Now*: As defined by Hicks and others, the Cambrian is a thick series of slates, schists, sandstones, and conglomerates, with both intruded and intercalated igneous rocks, linked by similarity of fossils, and older than the Silurian series. They are found in Wales and elsewhere, contain many Trilobites and Brachiopods, with other fossils, and are known as: 1. Tremadoc Slates (uppermost); 2. Lingula-flags; 3. Menevian-beds, and 4. Longmynd group, consisting of Harlech grits and Llanberris slates. The Geological Surveyors (following Murchison) limit the term to the Longmynd Group; but others (after Sedgwick) include all Murchison's "Lower Silurian" (Bala and Llandeilo groups) in the "Cambrian."

Cambrian formation:

Geol.: The series of rocks described under B. II.

Cambrian group:

Geol.: Lyell's name for the Cambrian rocks belonging to what is more commonly termed the Cambrian formation, the word group in this sense now tending to obsolescence.

Cambrian system: The same as *Cambrian formation* and *Cambrian group* (q. v.).

cām'-brīc, ***cām'-brīck** (1), *s. & a.* [In Dut. *kamerijck*; Ger. *kammertuch*; Fr. *toile de Cambrai*; from *Cambray*, a town in France, where it was originally made.]

A. *As substantive*:

1. A kind of very fine white linen cloth.

"He hath ribbons of all the colors of the rainbow; inks, caddises, *cambricks*, and lawns."—*Shakesp.: Winter's Tale*, iv. 3.

2. A fabric consisting of hard-spun cotton yarn, of various colors, in imitation of linen cambric.

B. *As adj.*: Pertaining to or made of the material described in A 1.

"And *cambric* handkerchiefs reward the song."—*Gay.*

***cām'-brīck** (2), *s.* [CAMMOCK.]

cām-būr'-ā, **chām'-būr-ū**, *s.* [Brazilian *chamburu*.]

Bot.: A plant, *Carica digitata*, order Papayaceæ (*Papayads*). It is regarded, where it grows, as a deadly poison.

cām'-buý, *s.* [A Brazilian word.] The native name of a fruit derived from a species of *Eugenia*. It is said by Von Martins to be excellent for desserts.

Cām'-dēn'-ī-ān, *a.* [From William Camden, founder, in 1622, of the Professorship mentioned in the example.] Founded by Camden.

"He was *Camdenian* Professor of Ancient History in the University of Oxford."—*Macaulay: Hist. Eng.*, ch. xiv.

cām'-dū-ī, *s.* [From Gael. *cam*=crooked, and *dubh*=black.] A kind of trout. (*Jamieson.*)

cāme, *pret. of v.* [COME.]

cāme (1), *s.* [COMB.]

cāme (2), *s.* [CAMES.]

cām'-el, ***cam-eil**, ***cam-ail**, ***cham-ayle**, ***cham-el**, ***cham-ail**, ***cham-elle**, ***cam-elle**, ***kam-el**, *s. & a.* [O. Fr. *chamel*, *camel*; Sp. & Ital. *camelo*; Gael. *camhal*; Lat. *camelus*; Gr. *kamēlos*; from Heb. *gimel*; Arab. *jamal*.]

A. *As substantive*:

I. *Ord. Lang.*: The name given to two animals, the *Camelus dromedarius* and *C. bactrianus* [CAMELUS], the former generally called the Arabian Camel, or simply the Camel, and the latter the Bactrian Camel.

1. The Arabian species, which has but one hump on its back. Of this there are two varieties: Variety 1 is large and full of flesh, and able on an emergency to carry burdens of 1,000 lbs. weight, though 500 or 600, or at most 800 lbs., are a more appropriate

load. The soft-cushioned foot is admirably adapted to support the animal in traversing the desert, and its stomach can be converted into watertanks, from which a supply of the precious fluid can be obtained when the animal has no other method of slaking its thirst. So admirably is it adapted for the arid wastes, that it has been called the ship of the desert. Variety 2 is leaner and of a smaller size. It is often called the Dromedary (from Gr. *dromas*=running), the name being given because of its swiftness. It is unfit to bear heavy burdens, but will go one hundred miles a day. It is generally used for riding by men of quality.

2. The Bactrian species, which is stouter and more muscular than the Arabian Camel, from which it differs in having two humps on its back.

"Him and his men and hire *camel*."

Story of Gen. and Exod., 1, 398.

"*Camelle* or *chamelle*."—*Prompt. Parv.*

"Camels have large solid feet, but not hard. Camels will continue ten or twelve days without eating or drinking, and keep water a long time in their stomach, for their refreshment."—*Calmet.*

II. *Technically*:

1. *Naut. (Pl.)*: Hollow cases of wood, constructed in two halves, so as to embrace the keel, and lay hold of the hull of a ship on both sides. They are first filled with water and sunk, in order to be fixed on. The water is then pumped out, when the vessel gradually rises, and the process is continued until the ship is enabled to pass over a shoal or sill. Similar camels were used at Rotterdam about 1690.

2. *Stocking frames*: A bar mounted upon four wheels, and capable of being drawn forward and backward through a small space. Upon it are mounted the jacks with their springs, and the slidebar upon which traverses the slur by which the jacks are actuated successively. (*Knight.*)

B. *As adjective*: (See the compounds.)

¶ Compounds of obvious signification: *Camel-backed*, *camel-hide*.

camel-back, *s.* The name given to a species of locomotive engine in use upon some of our Eastern railways, particularly among the Appalachian mountains. They are a powerful, compound type of machine, and are used principally for heavy freight traffic. The name camel-back is applied on account of the contour of the upper portion of the engine.

camel-bird, *s.* A name given to the ostrich.

camel-insects, *s. pl.* A name sometimes given to the insects of the genus *Mantis* (q. v.).

camel-locusts, *s. pl.* The same as *CAMEL-INSECTS* (q. v.).

camel's-hair, **camel-hair**, ***camel-hare**, *s. & a.*

*A. *As substantive*:

1. *Ord. Lang.*: The hair of a camel.

2. *Fabric*: A rough fabric made of the hair of a camel.

"Wit *camelhare* was he cledde."—*Metrical Homilies*, p. 10.

B. *As adj.*: Made of the hair of a camel.

"Bees will act like a *camel-hair* pencil."—*Darwin: Origin of Species* (ed. 1859), ch. iv., p. 97.

camel's-hay, *s.*

Bot.: A kind of sweet-smelling rush—the *Andropogon schœnanthus*—growing in Eastern countries.

camel's-thorn, *s.*

Bot.: A plant, *Alhagi Camelorum*.

cā-mē'-lē-ōn, *s.* [CHAMELEON.]

cameleon-mineral, *s.* [CHAMELEON-MINERAL.]

cām-ēl'-ī-dæ, *s. pl.* [From Lat. *camelus* (q. v.), and fem. pl. suffix *-idæ*.]

1. *Zoöl.*: A family of Ruminants, containing the Camels and Llamas. The dentition differs from that of the typical Ruminantia. In the upper jaw there are three teeth on each side in front separated by slight intervals. There are a conical incisor, a canine, and a premolar. Then after a gap the rest of the molars follow. There are no horns. The lower surface of the foot is applied to the ground. There are two toes inclosed in skin, and the hoofs are reduced almost to the size of nails. There are two recent genera—*Camelus* in the eastern hemisphere, *Auchenia* in the western.

2. *Paleont.*: Various extinct genera of *Camelidae* have been found in the Lower Miocene and in the Pliocene of North America. In the eastern world no species has been found earlier than the Upper Miocene (?) of the Sewalik hills on the flanks of the Himalayas. It is a genuine *Camelus*, *C. sivalensis*.

cām-ēl'-ī-nā, *s.* [Lat. From Gr. *chamai*=on the ground, and *linon*=flax.]

Bot.: A small genus of cruciferous plants (*Brassicaceæ*), containing two or three European and North American species. They are dwarf annual or perennial herbaceous plants, with stem-clasping leaves, and terminal racemes of yellow flowers. The most interesting species is the *Camelina sativa*.

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camēl, hēr, thēre; pine, pīt, sīre, sīr, marine; gō, pōt, or, wōre, wōlf, wōrk, whō, fōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trý, Sýrian. æ, œ = ē; ey = ā. qu = kw.

sometimes called Gold of Pleasure. It is cultivated for the fiber and oil obtainable from its seeds. By pressure they yield a clear yellow-colored oil, something like linseed-oil, and the residual cake has been recommended as food for cattle. The fiber is used in many parts for making brooms.

cām'-ē-line, a. & s. [O. Fr. *cameline*; Fr. *cameline*; Ital. *camellino*; Low Lat. *camelinus*=pertaining to a camel; *camelus*=a camel.]

†**A. As adj.**: Pertaining to or of the nature of a camel.

***B. As subst.**: A coarse fabric, made originally of camel's-hair. [CAMLET.]

"Dame Abstinence streyned, toke on a robe of *cameline*." Rom. of Rose, 7,366.

cām-ēl'-ī-nē-æ, s. pl. [From Mod. Lat. *camellina*, and fem. pl. suffix *-eæ*.] The same as *Camellinidæ* (q. v.). (Hooker & Arnott.)

cām-ēl'-ī-nī-dæ, s. pl. [From Mod. Lat. *camellina*, and fem. pl. suffix *-idæ*.] Bot.: A family, sub-tribe, or sub-section of the Brassicaceæ or Cruciferae (Crucifers), and the tribe or section Notorhizeæ. [CAMELINEÆ.]

***ca-me'-li-on**, s. [Eng. *camel*, and *lion*.] Apparently used for CAMELOPARD (q. v.).

"*Camelion*, that is, a beast lijk a camele in the heed, in the bodi to a paard."—Wickliffe: Deut. xiv. 5.

ca-mēl'-lī-a, s. [From *Camelli*, a Jesuit, by whom the flower was introduced from the East.]

Bot.: A genus of plants, order Ternströmiaceæ (Theads). It is very near akin to *Thea*, which contains the tea plant; indeed, some botanists combine the two genera into one. The native countries of the *Camellias* are the eastern side of the Himalaya mountains, Cochinchina, China, Japan and the Eastern Islands.

camelopard (pron. cām'-ēl-ēp'-ard), s. [From Lat. *camelus*=a camel; and *pardus*=a panther. He is so named because he has a neck and head like a camel; he is spotted like a pard, but his spots are white upon a red ground. (Trevour.)]

Zoöl.: A name sometimes given to the Giraffe, *Camelopardalis Giraffa*. [CAMELOPARDALIS, GIRAFFE.]

cām-ēl-ō-par'-dāl-is, cām-ēl-ō-par'-dāl-ūs, s. [CAMELOPARD.]

1. Zoöl. (of the form *camelopardalis*): The typical genus of the family *Camelopardalidæ* (q. v.).

2. Astron. (of the form *camelopardalus*): The Camelopard, a northern constellation, first so named by Hevelius. A straight line, drawn from Capella to the pole-star, passes through its center.

cām-ēl-ō-par'-dēl, s. [From Eng. *camelopard*, and suff. *-el*.]

Her.: An imaginary animal, being a Camelopard with two straight horns, more prominent than those of the real Camelopard (the Giraffe).

cām-ēl-ō-par'-dī-dæ, cām-ēl-ō-par'-dāl'-ī-dæ, a. pl. [From Mod. Lat. *camelopardalis* (q. v.), and fem. pl. suff. *-idæ*.]

1. Zoöl.: A family of Ruminants, containing only one known species, the *Camelopardalis Giraffa*. The dentition is the same as in the Deer. [CAMELOPARDALIS.]

2. Palæont.: Some species of the *Camelopardalis* occur in Miocene rocks in the Old World.

cām'-ē-lot, s. [CAMLET.]

ca-mē'-lūs, s. [Lat., from Gr. *kamēlos*.]

1. Zoöl.: A genus of mammals, the typical one of the family *Camelidæ* (q. v.). The species differs from those of *Auchenia* in having the toe separate, and in possessing one or two humps on its back. [AUCHENIA.] There are two species, *Camelus dromedarius*, the Dromedary or Arabian Camel, and *C. bactrianus*, or the Bactrian Camel. [CAMEL.]

2. Palæont.: [CAMELIDÆ.]

cā-mē'-nēs, s. Logic: A mnemonic word to express a syllogism in the fourth figure, having one universal affirmative and one universal negative premise and a universal negative conclusion.

cām'-ē-ō, cām-māi-eu, cām-māy-eu (eu as ū), s. & a. [Ital. *cammeo*, *cameo*; Fr. *camée*, *caméïeu*, *camayeü*; O. A. As substantive:

1. Ordinary Language:

1. A precious stone carved in relief, such as the onyx or agate. The stone used should have two or more layers of different colors, and the art consists in cutting away portions of the stone so as to expose these different colors in the various parts of the work to which they are appropriate. Shells, especially the strombus or stromb shell, a genus of wing shells, are frequently used for the same purpose.

"... we will call the attention of our readers to the forms of engraving entitled *camaiëu* and *intaglio*. . . .

We refer our readers to Winkelman's interesting account of the celebrated *cameos* which are handed down to us. . . ."—*Foreign Quarterly Review*, No. 1.

† The accent is rarely on the second syllable.

"Each nicer mold a softer feature drinks,
The bold *cameo* speaks, the soft *intaglio* thinks."
Darwin: Botanic Garden.

*2. Any carved work in low relief.

II. Painting. [CAMAIËU (2).]

B. As adj.: Salient as opposed to *intaglio*.

cameo-incrustation, s. A bas relief cast of a bust or of a medal inclosed within a coating of white flint-glass. It was first introduced by the Bohemians.

Phot.: A small vignette daguerreotype for mounting in a jewel case like a *cameo*.

cām'-ēr-a (1), s. [Ital. *kamera*=a chamber; Lat. *camera*=a vault; Gr. *kamara*, anything with an arched cover, . . . a vaulted chamber.] [CHAMBER.]

1. Ord. Lang.: Any instrument having a dark chamber, and especially the camera-obscura and the camera-lucida (q. v.).

2. Law: A judge's chamber.

† To hear a cause in *camera*: To hear a cause privately in the judge's own room instead of in open court.

3. Naut.: A kind of ship used in the Black Sea.

camera-lucida, s. [In Ger. *kamera lucida*; from Lat. *camera* (q. v.), and *lucida*=containing light, full of light, bright; opposed to *obscura*=dark.] An instrument invented by Dr. Woolaston in 1804 or 1807, and subsequently improved by Professor Amici, of Modena. Its design is to produce on a plane surface such a representation of a landscape, an object of natural history, or other visible thing, as may enable one to delineate it with accuracy. In Dr. Woolaston's instrument there is a glass prism of such a form that its base or its apex (it is the same with both) has the following angles: 90°, 67½, 135°, and 67½. An object placed at a proper distance, in a horizontal direction, from one of the planes inclosing the right angle, will send forth rays, which in their passage through the prism will be twice totally reflected, and finally reaching the observer's eye, placed near one of the acute angles and looking downward, will enable it to see the object of which it is in quest depicted on a surface placed in proper focus beneath. It is difficult for the eye, however, to take in both the figure and the point of the pencil at the same moment. In Professor Amici's instrument, designed to cure this defect, there is a rectangular glass prism with one of the perpendicular faces turned, as in the former case, to the object which is designed to be depicted, while the other is at right angles to an inclined plane of glass. The point of the pencil is seen distinctly through the inclined glass plate, and there is every facility for tracing the picture.

camera obscura, s. [In Ger. *kamera obskura*; Fr. *chambre obscure*; Ital. *camera oscura*. From Lat. *camera* (q. v.), and *obscura*, f. adj.=obscure, dark.] An instrument of which, as the name imports, the essential feature is a dark chamber. It was invented, according to some, by Friar Bacon, about the 13th century; but is generally attributed to Baptista Porta, who published a work at Antwerp in 1560 in which it was described. If in the window of a chamber from which light is everywhere rigidly excluded a hole is made, about an inch in diameter, the rays streaking in will depict on the opposite wall a rude picture of the moving panorama seen in the street, or any other objects which may rest or pass before it. The delineation is, however, very shadowy, but may be made better defined by placing a double convex lens in the aperture and a sheet of paper in proper focus for the picture. The lens will reverse the figures, which may be put right again by making the rays fall on a mirror at an angle of 45°. Brewster discovered that the images became very bright by receiving them on the silvered back of a mirror. In the room now described are all the essentials of a *camera obscura*, and all that is needful is to imitate the procedure now described in an artificial "camera" or "room" made small enough to be portable. For the walls may be substituted a rectangular wooden box, formed of two parts sliding in each other, like the joints of a telescope, so as to adjust the focus to

Camera Obscura.

bodies more or less distant. A tube with a lense is fixed in one side of it, and is turned to the object to be represented. The rays entering fall on a mirror sloped at an angle of 45°, which reflect them upward to the observer's eye. It is convenient that they may be made to pass through a horizontal plate of glass, on which tracing paper may be placed so as to enable one to draw the figure if he be so disposed, but now this is generally done not by the hand but by photography (q. v.). Alid to the box is of use in ridding the observer of superfluous light. The improvement in cameras has kept pace with progress in photography. Numerous inventions have had their origin in this country, particularly in the line of perfected cameras for tourists, all of which are constructed with a view to facilitate the process of quick-exposure or instantaneous photography. Of this class of instruments the best known among us is the *Kodak* (q. v.).

There are other forms of camera. One with a triangular prism which acts both as condensing lens and mirror, and casts downward on a table or screen a representation of the surrounding scene or landscape. Such an instrument placed on a hill in a city, and so adjusted that more or less distant objects may be brought into focus, presents a beautiful panorama of the streets with their moving population.

camera-stand, s.

Phot.: A frame on which the camera rests, and which is adjustable to vary the height, horizontal presentation, or inclination of the optic axis as may be required.

¶ *Cameronian regiment*: The 26th of the British army. [B.]

"The Earl of Angus was able to raise a body of infantry, which is still, after the lapse of more than a hundred and sixty years, known by the name of the *Cameronian Regiment*."—*Macaulay: Hist. Eng.*, ch. xiii.

B. As substantive:

Ch. Hist.: A follower of the Rev. Richard Cameron. At the time of his death, his adherents had not separated from their Presbyterian brethren. They did so, however, after the Revolution of 1688, and became a distinct denomination. Though in certain respects they disapproved of the settlement then made, yet they considered it a vast improvement on that of the preceding Stuart dynasty, and gave it active support. The government of William and Mary, in consequence, when in some danger from the Jacobites, raised two regiments from the Cameronians, one of which (that mentioned above), still remains part of the British army. [CAMERONIAN REGIMENT.] For the subsequent history of the Cameronians, see *Reformed Presbyterians*.

cāmp, s. [A. S. *camp*; Fr. *camp*; Ital. & Sp. *campo*; Lat. *campus* = a field.]

I. *Ordinary Language*:

1. *Literally*:

* (1) A field, a plain, a level surface.

* (2) The same as II. 1.

"... shall one carry forth without the *camp*."—*Lev.* xvi. 27.

"Beyond the limits of his *camps* and fortresses he could scarcely be said to have a party."—*Macaulay: Hist. Eng.*, ch. i.

* (3) A division of a settlement.

"And the children of Israel shall pitch their tents, every man by his own *camp* . . ."—*Numb.* i. 52.

2. *Figuratively*:

* (1) Applied to any level surface, even to the sea, as a plain.

"To search all corners of the watery *camp*."

Sylvester: Du Bartas.

* (2) The army or number of persons encamped together in tents or other temporary lodgings.

"Both *camps* approach, their bloody rage doth rise."

Sylvester: Du Bartas.

"Dismiss thy *camp*."—*Marlowe: Mass. at Paris*, ii. 6.

* (3) An army in the field.

"... and in this situation, carrying more show than real force with it, the *camp* arrived at Bernice."—*Hume: History of England*, v. 319.

(4) Military service, "the field."

* (5) A multitude, a host.

II. *Technically*:

1. *Mil.*: The space occupied by an army halted with tents pitched.

(1) *Old British Camp*: A camp not angular occurring in England is, as a rule, of British origin; one with angles is presumably Roman.

(2) *Old Roman Camp*: A Roman encampment was, as a rule, a square, each side of it 2,150 Roman or 2,077½ English feet. Each of the sides had a gate. The *principia*, or principal street, ran from side to side, not quite bisecting each of them.

In the rear of it was another one parallel to the first. Behind this, part of the allied forces were encamped. In the center, between the two streets, were the quarters of the prætor commanding and his staff. Between the *principia* and the front of the camp the body of the troops were encamped. A street called *quintana* ran parallel to the others through the center of this main part of the camp, and five streets crossed it at right angles.

(3) *Modern Camps*: If not near the enemy, infantry are distributed on dry ground, the cavalry near water, the artillery near good roads, the hospital and transport in rear. If near the enemy, they are arranged in order of battle. An *intrenched camp* is one surrounded by earthworks. A *flying camp* is one to be occupied for a very brief period. A *camp of instruction* is one formed for the reception of troops to be maneuvered.

2. *Agric.*: A mound of earth under which potatoes and other vegetables are stored, as a protection against frost.

¶ Compounds of obvious signification: *Camp-bedstead*, *camp-boy*, *camp-fire*, and *camp-followers*.

camp-bed, s. A small light cot or bedstead, generally of iron, for the use of military men or travelers.

camp-ceiling, s.

Arch.: A ceiling in which the marginal portion is sloping, following the line of the rafters, while the mid-portion is level.

camp-chair, s. A form of folding chair adapted to be carried by a pedestrian, or packed away in an ambulance or wagon when on the march. [FOLDING-CHAIR.]

camp-fever, s.

Med.: The name popularly given to all those forms of fever which occur during a campaign, when large bodies of men are camped out and huddled together in a limited space, without a proper

regard to the laws of sanitation and to the necessary supply of pure air, water, and food. The fever most likely to occur under such circumstances would be typhus, malignant, and common typhoid, intermittent (ague), dysentery, diarrhoea, &c.

camp-fight, *s.* The decision of any dispute by combat; a trial by arms.

"For their trial by *camp-fight*, the accuser was, with the peril of his own body, to prove the accused guilty."—*Hakewill*.

camp-follower, *s.* One who follows an army without being in the service; as a sutler, &c.

camp-itch, *s.* A species of itch prevalent among bodies of men who come in intimate contact. It is supposed by some authorities to gather intensity as it rages, growing upon that on which it feeds. It is occasioned by the entrance beneath the skin of a minute animal parasite, the *Acarus scabiei*. The best remedy is iron internally (where indicated), and sulphur flour, in grease of some kind, well rubbed in the skin.

camp-kettle, *s.* An iron or tin kettle used by soldiers when camping out.

camp-kit, *s.* A box, with its contents, for containing soldiers' cooking and mess utensils, such as the camp-kettle, plates, &c.

camp-meeting, *s.* A meeting held in the open air or in a tent for religious purposes.

camp-mill, *s.* A mill adapted for the use of an army, to grind grain on the march or in camp. It is carried on a wagon or running-gears, and is sometimes driven by the wheels in traveling; sometimes by a sweep operated by horses or men after the wheels are anchored or sunk in the ground.

camp-sheeting, *s.*

Hydraulic Engineering: A piling erected at the foot of an embankment to prevent the out-thrust or the washing by the current or waves. It consists of guide-piles exteriorly, against which are placed wale-pieces, which are horizontal timbers. Within these are driven vertical planks of the nature of pile-sheeting.

camp-stool, *s.* A chair whose frame folds up into a small compass for convenience of packing or carriage. Camp-stools were known in ancient Egypt, and were constructed in a manner similar to ours.

camp-stove, *s.* A light sheet-iron stove, specially arranged with a view to portability, and adapted for heating a tent or hut, and for cooking purposes.

camp-table, *s.* A table adapted to fold into a small space for transportation.

camp-vinegar, *s.* A mixture of vinegar with cayenne pepper, soy, walnut catchup, anchovies, and garlic.

"... the officers who *campaigned* in the late rebellion..."—*Sir R. Musgrave: History of the Irish Rebellion*, p. vi.

cāmp-paign'-ēr (*g* silent), *s.* [Eng. *campaigner*; -er.] One who serves in a campaign, a soldier.

"Both horse and rider were old *campaigners*."—*Smollett: Expedition of Humphry Clinker*.

cāmp-paign'-ing (*g* silent), *pr. par. & s.* [CAMPAIGN, *v.*]

A. As pr. par. (See the verb.)

B. As subst.: The act of serving with an army in the field.

cāmp-pā'-na, *s.* [Low Lat. *campana* = a bell. In Sp. & Ital. the flower is also called *campana*, from the shape of the flowers.]

1. Ord. Lang.: A bell, especially one for a church.

2. Bot.: The pasque flower.

"*Campana* here he crops, accounted wondrous good."—*Drayton: Polyolb.*, s. 13.

cāmp'-pa-nal, *a. & s.* [From Low Lat. *campana* = a bell; and suff. -al.]

A. As adjective:

Bot.: Pertaining to the genus *Campanula*, as, "the Campanal alliance."

B. As subst. (Pl. Campanals): The English name given by Lindley to his alliance Campanales (*q. v.*).

cāmp-pan-ā'-lēš, *s. pl.* [From Low Lat. *campana* = a bell; and pl. in. or f. suff. -ales.]

Bot.: Campanals, an alliance of plants, epigynous Exogens, containing dichlamydeous monopetalous flowers and an embryo with little or no albumen. Lindley places in it the orders Campanulaceæ, Lobeliaceæ, Goodeniaceæ, Stylidiaceæ, Valerianaceæ, Dipsacæ, and Asteraceæ (*q. v.*).

†cāmp-pā-ne, *s.* [Lat. *campana* = a bell.]

Her.: A bell, or bell-shaped vessel borne on coat-armor.

†cāmp-pā-ned, *a.* [Lat. *campana* = a bell.]

Her.: Furnished with or bearing bells.

cāmp-pan-ē'-rō, *s.* [From *campana*.]

Zoöl.: A bird, a native of Brazil.

†cāmp-pān'-i-form, *a.* [Lat. *campana* = a bell; *forma* = form, shape.]

Bot.: Bell-shaped; an epithet applied to flowers which resemble a bell in shape.

cāmp-pān'-ile, *s.* [Ital. & Low Lat. *campanile* = a bell-tower, steeple; *campana* = a bell.] A tower for the reception of bells, principally used for church purposes, but now sometimes for domestic edifices. The campanile at Cremona is very celebrated, being 395 feet high. That at Florence, by Giotto, is 267 feet high, and 45 feet square. The most remarkable of the campaniles is that at Pisa, commonly called the "Leaning Tower." It is cylindrical in form, and surrounded by eight stories of columns, placed over one another, each having its entablature. The height is about 150 feet to the platform, whence a plumb-line lowered falls on the leaning side nearly thirteen feet outside the base of the building. (*Gwillt*.)

cāmp-pan-il'-i-form, *a.* [Ital. *campanilla* = a little bell; dimin. of Lat. *campana* = a bell; *forma* = shape, form.] Bell-shaped.

cāmp-pan-ōl'-ō-gist, *s.* [Eng. *campanolog(y)*; -ist.] One skilled in the science of campanology or bell-ringing.

cāmp-pan-ōl'-ō-gy, *s.* [Lat. *campana* = a bell, and Gr. *logos* = a treatise, discourse.] The science of bell-ringing; a treatise on bell-ringing.

cāmp-pān'-u-lā, *s.* [Low Lat. *campanula* = a little bell, dim. of *campana* = a bell.]

Bot.: The Bell-flower, so called from the shape of its flowers. An extensive genus of herbaceous plants, giving the name to the order Campanulaceæ. *Campanula rapunculus*, *Rampion*, is much cultivated for the roots, which are boiled tender and eaten hot with sauce, or cold with vinegar and pepper. The best known species is *C. rotundifolia*, the Harebell, or Blue-bell of Scotland. A blue ink is made of its juice. *Campanula glauca* is said by the Japanese to be a tonic.

cāmp-pān-ū-lā'-cē-æ, *s. pl.* [Lat. *campanula*, and fem. pl. suff. -aceæ.]

Bot.: A natural order of plants, chiefly natives of this country, of the north of Asia and Europe. More than 200 species of this family are known.

cāmp-pān-ū-lār'-ī-a, *s.* [Low Lat. *campanula* = a little bell.]

Zoöl.: A genus of corals of the family Campanulariadae, in which the polypi assume a bell shape.

cāmp-pān-ū-lār'-ī-a-dæ, *s. pl.* [From Mod. Lat. *campanularia*, the typical genus, and fem. pl. suff. -adæ.]

Zoöl.: A family of marine Polypi belonging to the order Hydroida. Cells terminal, stalked campanulate; polypes with a large trumpet-shaped proboscis. There are six genera. (*Griff. & Henfrey*.)

cāmp-pān-ū-lār'-ī-da, *s. pl.* [From Mod. Lat. *campanularia* (*q. v.*), and neut. pl. suff. -da.]

Zoöl.: An order of hydroid Zoophytes. They are closely allied to the Sertularida, but their hydrothecæ, with their containing polypites, are supported on conspicuous stalks, and are terminal, while those of the Sertularida are sessile or sessile and placed laterally. Nicolson thinks the two orders not properly distinct.

cāmp-pān'-ū-lāte, *a.* [Low Lat. *campanulatus*, from *campanula* = a little bell, dim. of *campana* = a bell.]

Bot., &c.: Having the shape or form of a bell, bell-shaped.

cāmp-pān-ū-lī'-nā, *s.* [Low Lat. *campanula* = a little bell; neut. pl. suff. -ina.]

Zoöl.: A genus of marine Polypi, the typical one of the family Campanulinidae. There are three species. Stem simple or branched rooted; cells pointed above; polypes cylindrical, with webbed tentacles. Reproduction by free medusa webs, single in each capsule. (*Griff. & Henfrey*.)

cāmp-pān-ū-līn'-ī-dæ, *s. pl.* [From Mod. Lat. *campanulina*, the type; and fem. pl. suff. -idæ.]

Zoöl.: A family of marine Polypi with ovato-conic cells, stalked; polypes long, cylindrical, with a small conical proboscis.

Campbellites (**cāmp'-bēl-ītes**), *s. pl.* [See def.] The followers of Rev. John McLeod Campbell, of Dumbartonshire, who was deposed from the Church of Scotland, May 24, 1831, for teaching the universality of the Atonement. He established a church at Glasgow in 1833. The name is sometimes erroneously applied to the church founded in this country by Thomas and Alexander Campbell, and by its members called Christians, Christian Church, or Disciples of Christ (*q. v.*).

cāmp-çēil'-īng, *s.* [Mid. Eng. *cam* = crooked, curved, and *ceiling*.]

Arch.: A ceiling whose form is convex inwardly.

Cāmp-pē'a-çhỹ, **cāmp'-pēaçh-ỹ**, *s. & a.* [From the Gulf of Campeachy, in Mexico, whence the wood is imported.]

campeachy-wood, **campeche-wood**, *s.* The red dye-wood better known by the name of Log-wood, obtained from the *Hæmatoxylon Campechiannum*.

cāmp-pē'-phag-a, *s.* [Gr. *kampē* = a caterpillar; *phagēin* = to eat.]

Ornith.: A genus of birds belonging to the Laniadæ or Shrike family. It is the typical one of the sub-family Campephaginae (*q. v.*).

cāmp-pē-pha-gī'-næ, *s. pl.* [From Mod. Lat. (from Gr.) *campephaga* (*q. v.*), and Lat. fem. pl. suff. -inæ.]

Ornith.: A sub-family of Ampelidæ (Chatterers). They are found chiefly in the warmer parts of the Old World.

†cāmp'-ēr (1), *s.* [CAMP (1), *v.*] One who encamps or lodges in a tent in the field.

cāmp'-ēr (2), ***cam-par**, *s.* [CAMP (2), *v.*] A football-player.

cāmp-pēs'-tral, ***cāmp-pēs'-tri-an**, *a.* [O. Fr. *campestre*; Fr. *champêtre*; from Lat. *campestris* = pertaining to the field; *campus* = the field.] Growing in the fields or country, wild.

"The mountain beech is the whitest; but the *campestral*, or wild beech, is blacker and more durable."—*Mortimer*.

cāmp'-phāte, *s.* [Eng. *camph(ic)*, and suff. -ate.] *Chem.*: A salt formed by the union of camphic acid with a base. [CAMPHIC ACID.]

cāmp-phēn'e, **cāmp-phī'ne**, *s.* [Eng. *camph(or)*, and suff. -ene (*Chem.*).]

Chem.: C₁₀H₁₆. A crystalline hydrocarbon, obtained by the action of sodium stearate or acetate on a solid compound of HCl and turpentine.

camphene-lamp, *s.* A lamp in which camphene is burned.

***cāmp'-phēr-īe**, *s.* [COMFREY.]

cāmp'-phīc, *a.* [Eng. *camph(or)*; -ic.] Pertaining to camphor.

cāil, **boŷ**; **pōut**, **jōwl**; **cat**, **çell**, **chorus**, **çhin**, **bençh**; **go**, **gem**; **thin**, **thiç**; **sin**, **aç**; **expect**, **Xenophon**, **exist**. **ph** = **f**. -cian, -tian = **shan**. -tion, -sion = **shün**; -t̃ion, -çion = **zhün**. -tious, -cious, -sious = **shüs**. -ble, -dle, &c. = **bēl**, **deŷ**.

camphic acid, s.

Chem.: $C_{10}H_{16}O_2$. Obtained by heating camphor with alcoholic soda solution in sealed tubes to 170° – 180° along with camphol. The solution is neutralized with H_2SO_4 , dissolving out the sodium camphate with alcohol, evaporating and adding H_2SO_4 which precipitates the camphic acid, which is insoluble in water but soluble in alcohol. Its salts are called *camphates*.

cām-phîn'e, s. [CAMPHENE.]

cām-phôid, s. [Eng. camph(ory); -oid.] A substitute for collodion, composed of a solution, one in 40, of pyroxilin, in equal parts, by weight, of camphor and absolute alcohol. It is used as a vehicle for applications to the skin, and dries rapidly, leaving an elastic, opaque film, not easily washed off.

cām-phôl, s. [From Low Lat. camphora=camphor, and oleum=oil.]

Chem.: $C_{10}H_{17}(OH)$. A monatomic alcohol; there are several modifications, distinguished by their action on polarized light, as, Borneo camphor or Borneol, obtained from dryobalanops camphora, dextro 34.4° . Another dextro, 44.90° , is formed together with camphic acid by the action of alcohol potash on common camphor. A third dextro, 4.5° , by distilling amber with potash. A fourth, called lævo-camphol lævo, 33.40° , is found in the alcohol obtained by the fermentation of madder-root sugar. Dextro-rotary camphol forms small transparent colorless hexagonal prisms, which melt at 198° and distill at 212° ; soluble in alcohol and ether, insoluble in water. Lævo-rotary camphol forms a crystalline white powder slightly soluble in water. Camphol distilled with P_2O_5 gives a hydrocarbon, $C_{10}H_{16}$. Boiled with nitric acid it is reduced to common camphor, giving off two atoms of H.

cām-phôl-âte, s. [From Eng., &c., camphol, and suff. -ate (Chem.) (q. v.).]

Chem.: Camphor fused with potash unites directly with it and forms potassium campholate, $C_{10}H_{17}KO_2$.

cām-phôr, *cām-phîre, s. & a. [In Sw. & Dut. kamfer; Dan. kamfer; Ger. kampher; Wel. camphyr; Fr. camphre; Sp. canfor, canfora, alcanfor; Port. alcanfor, camphora; Ital. & Low Lat. canfora; O. Ital. cafura; Gr. (from Arab.) kaphoura. Cf. also Gr. karpion=an Indian tree; Arab. & Pers. kâfrâ; Malay kâpûr; Hindust. kâpura; Sansc. kar-pâra.]

A. Assubstantive:

I. Ordinary Language: The substance described under II. 1.

II. Technically:

1. Bot.: [See 2 Chem.]

¶ *Borneo or Sumatra Camphor:* A kind of camphor made from *Dryobalanops aromatica* or *Dryobalanops camphora*, a genus of the order Diptera-cæ or Dipterads. It differs from ordinary camphor in having six-sided crystals.

2. Chem.: $C_{10}H_{16}O$. It is called also Laurel Camphor. Camphor is obtained by distilling with water the leaves and wood of the camphor-tree, *Camphora officinarum*, formerly called *Laurus camphora*. It is a solid white volatile crystalline mass, tough and difficult to powder, has a peculiar odor; thrown on water it revolves and is slightly soluble. It is very soluble in alcohol, ether, and strong acetic acid. It has a dextro-rotary action on polarized light. Many essential oils deposit an inactive variety.

3. Comm.: Most of the camphor of commerce comes from Formosa. It is used to preserve natural history collections and clothes in drawers from the ravages of insects.

4. Pharm.: A powerful diffusible stimulant and antispasmodic, very useful, combined with extract of henbane, in genito-urinary irritation. It enters into union with opium, as a sedative, under the name of compound tincture of camphor or paregoric. It is useful in adynamic fevers, and has been employed in the treatment of hysteria, epilepsy, chorea, and whooping-cough and externally, as a stimulant to stiff and painful parts, as a liniment. Official preparations: Aqua camphoræ, linimentum C., linim. C. comp., spiritus camphoræ, and tinctura camphoræ composita. Camphor is a poison to the lowest forms of animals and plants. It is antiseptic. In large doses it lowers the pulse and temperature, and produces headache, sickness, coldness of the extremities, feeble circulation, unconsciousness, and even death. Undiluted it is a powerful irritant to mucous membranes and raw surfaces. "An artificial camphor can be made by passing hydrochloric acid gas through volatile oil of turpentine" (Garrod). The virtue imputed to it of preventing infectious diseases is not founded on correct observation.

B. As adjective: (See the compounds.)

camphor-gland, s.

Bot.: The gland in the camphor-tree which secretes the substance after which it is named.

camphor-ice, s. A preparation used as an application to chapped skin, the formula for which is given in the *National Formulary* under the title of *ceratum camphoræ compositum*.

camphor-oil, s. An aromatic oil obtained from the *Dryobalanops* before mentioned. It has been used for scenting soap.

camphor-tree, s. A tree belonging to the order Lauracæ, which furnishes camphor. It is the *Camphora officinarum*. It has ribbed leaves, nine stamens, and four-celled anthers. It grows in Formosa. The chopped branches of the tree are boiled

Branch of the Camphor-tree.

in water, the camphor being deposited after a time and then sublimated in order to remove its impurities. There are two sorts of this tree: one is a native of the island of Borneo, from which the best camphor is taken, which is supposed to be a natural exudation from the tree, produced in such places where the bark of the tree has been wounded or cut. The other sort is a native of Japan, which Dr. Kempfer describes to be a kind of bay, bearing black or purple berries, from whence the inhabitants prepare their camphor, by making a simple decoction of the root and wood of this tree, cut into small pieces; but this sort of camphor is, in value, eighty or a hundred times less than the true Bornean camphor. (Miller.)

†**cām-phôr, *cām-phîre, v. t. [CAMPHOR, s.]** To impregnate or combine with camphor, to wash with camphor.

cām-phôr-a, s. [CAMPHOR.]

Bot.: A genus of plants, order Lauracæ. *Camphora officinarum* is the Camphor-tree or Camphor Laurel. [CAMPHOR-TREE.]

cām-phôr-â-çê-ous, a. [Eng. camphor, and -aceous.] Of the nature of or containing camphor.

cām-phôr-âte, v. t. [CAMPHORATE, a.] To impregnate, combine, or wash with camphor.

cām-phôr-âte, a. & s. [Eng. camphor, and suff. -ate (q. v.). In Sp. alcanforado.]

A. As adjective: Impregnated or saturated with camphor, camphorated.

"By shaking the saline and camphorate liquors together, we easily confounded them into one high-colored liquor." —Boyle.

B. As substantive: [CAMPHORIC ACID.]

cām-phôr-â-têd, *cām-phîr-â-têd, pa. par. or a. [CAMPHORATE, v.] Impregnated or combined with camphor.

cām-phôr-îc, a. [From Eng., &c., camphor, and suff. -ic.] Pertaining to camphor; occurring in or derived from camphor.

camphoric acid, s.

Chem.: $C_{10}H_{16}O_4$. Formed by the action of hot nitric acid on camphor. Camphoric acid is slightly soluble in cold water; it crystallizes in small colorless needles. By distillation it yields a colorless crystalline substance, camphoric anhydride or oxide, $C_{10}H_{14}O_3$. Calcium camphorate, by dry distillation, yields a ketone volatile oil called *Phorone*, $C_9H_{14}O$.

cām-phôr-ôç'-ma, s. [From Mod. Lat. camphora, and Gr. osmê=smell.]

Bot.: A genus of Chenopodiaceæ, the plants of which have a smell like that of camphor. All are found in Asia, except one on the Mediterranean.

cām-phÿl, s. & a. [Eng. camphor, and suffix -yl; from Gr. hulê= . . . matter, as a principle of being.]

Chem.: A mouad radical ($C_{10}H_{17}$). [BORNEOL.]

camphyl chloride, s.

Chem.: $C_{10}H_{16}HCl$. A crystalline lævo-rotary substance, isomeric with the hydrochloride of turpentine oil. It is prepared by heating camphol in a sealed tube with HCl.

cāmp'-îng (1), *cāmp'-ÿnge (1), pr. par., a. & s. [CAMP (1), v.]

A. & B. As pr. par. & particip. adj.: (See the verb.)

"I, his despicable Juno, sent him forth
From courtly friends, with camping foes to live."
Shakesp. *All's Well that Ends Well*, iii. 4.

C. Assubstantive:

1. The act of pitching a camp.
2. The act of lodging temporarily in a tent or in the open air.

cāmp'-îng (2), *cāmp'-ÿnge (2), pr. par., a. & s. [CAMP (2), v.]

A. & B. As pr. par. & particip. adj.: (See the verb.)

C. As subst.: Foot-ball, or any similar sport.

cāmp'-î-ôn, *cām'-pî-ōun, *cām'-pÿ-ôn, s. [CHAMPION.]

1. Ord. Lang.: A champion.

"Quhen dangeir occurrit, thay refusit na maner of besines nor labour that mycht pertene to forsy campionis." —Bellend. *Descr. Alb.*, c. 16.

2. Botany:

(1) A book-name for various species of *Lychnis*. Prior thinks the name was given because the plant was used in chaplets with which champions at the public games were crowned.

(2) A name for various species of *Silene*.

(3) A name for the *Cucubalus baccifer*, a sileneaceous plant.

¶ *Lychnis chalcedonica* is the Champion of Constantinople; *L. Githago* is the Corn Champion; *L. Flos-cuculi*, the Meadow Champion; *Silene acaulis*, the Moss Champion; *Lychnis diurna*, the Red Champion; *L. coronaria*, the Rose Champion, and *L. vespertina*, the White Champion.

cām-pō'-dē-a, s. [From Gr. kampē=a bending, a joint; and pous, genit. podos=a foot (?).]

Entom.: A genus of Thysanura. The insects, like their allies the Lepismæ, live under stones and in other dark places. Sir John Lubbock thinks it a modern representative of an ancient type form from which the higher insects originally took their rise. (Nicolson: *Zool.*)

cām-pōph'-î-lūs, cām-pēph'-î-lūs, s. [Gr. kampe=a caterpillar, and philos=loving.] A genus of large woodpeckers, of which the Ivorybill (*C. principalis*) is a well-known American species.

cāmp-tō-çēr'-cūs, s. [Gr. kamptos=bent, curved; kerkos=a tail.]

Zoöl.: A genus of Entomotraca, of the order Cladocera, and family Lynceidæ. There is only one species, *Camptocercus macrourus*. Carapace striated longitudinally, slightly sinuated and ciliated on the anterior margin; beak rather blunt. It is aquatic. (Griff. & Henfrey.)

cāmp-tōt'-rō-pal, a. [Gr. kamptos = curved, bent, and tropē=a turning, a turn.]

Bot.: For definition and example see CAMPULITROPOUS.

cāmp-tÿ'-lî-cōn, s. [From Gr. kamptō=to bend, curve; oulê=a wound scarred or skinned over, and eikōn=image.]

Fabrics: A compound used as a substitute for carpet or oil-cloth. It is made by a combination of powdered cork and the poorer qualities of india-rubber, and is painted or ornamented on the surface like oil-cloth. It is not suitable for chambers, as being a good conductor of heat, and feeling as cold to the bare feet as wood or oil-cloth. It may be employed for cleaning knives, which is done by covering a strip of wood with it; then sprinkling the surface with the cleaning powder, and rubbing on the knife. The surface does not wear away, and the result is very satisfactory.

cāmp-u-lî't'-rō-poūs, cām-pÿ-lî't'-rō-pal, cām-pÿ-lôt'-rō-poūs, a. [Gr. kampylos=curved, and tropē=a turning.]

Bot.: Having the ovule so bent or curved that the micropyle, chalaza, and hilum are near each other.

"Such ovules are called *campylotropal* or *campylotropous*, when the portions either side of the line of curvature are unequal, or *campitotropal* when they are equal." —Balfour: *Botany*, p. 236.

cāmp'-ÿ, a. [CAMP (2), v.]

1. Brave, heroic.

2. Ill-natured, quarrelsome.

cāmp'-ÿl-îte, s. [Gr. kampylos=bent, crooked, curved, and Eng. suff. -ite (Min.) (q. v.).]

Min.: A variety of Mimetite or Mimetesite. Dana places it under his third variety, i. e., that containing much phosphoric acid.

cāmp-ÿl-ô-dîs'-cūs, s. [Gr. kampylos=curved, bent; diskos=a disk.]

Bot.: A genus of Diatomacæ, with frustules single, free, disk-shaped; the disk curved or twisted (saddle-shaped); furnished with mostly radiate markings, frequently interrupted. They are aquatic and marine. Smith describes nine species. (Griff. & Henfrey.)

cāmp-ÿl-ôp'-tēr-ūs, s. [Gr. kampylos=curved; pteron=a wing.]

Zoöl.: A genus of birds, of the family Trochilidæ, or Humming-birds.

fâte, fât, fâre, amidst, whât, fâll, father; wê, wêt, hêre, camêl, hêr, thêre; pîne, pît, sîre, sîr, marine; gô, pôt, or, wôre, wôlf, wôrck, whô, sôn; mûte, cûb, cûre, unite, cûr, rûle, fûll; trÿ, Sÿrian. æ, œ = ē; ey = â. qu = kw.

cămp-ŷl-ō-spēr'-mate, *căm-pŷl-ō-spēr'-mōus, *a.* [Gr. *kampylos*=curved, *sperma*=a seed.] *Bot.*: Having the edges of the seed curved so as to form a channel or groove, as in some umbelliferous plants.

cămp-ŷl-ōt-rō-pal, *a.* [From Gr. *kampylos*=bent, crooked, and *tropos*=a turning, and Eng. suff. -al.] The same as CAMPYLOTROPOUS (q. v.).

cămp-ŷl-ōt-rō-poŷs, *a.* [From Gr. *kampylos*=bent, crooked, and *tropos*=a turn, a direction.] [CAMPULITROPOUS.]

Bot.: A term used of an axis of an ovule when, in place of being straight, it is curved down upon itself to such an extent that the form almost touches the hilum. Example, the Mignonette.

cămp-ŷl-lŷs, *s.* [Gr. *kampylos*=crooked, bent.] *Entomol.*: A genus of coleopterous insects of the tribe Elateridae.

***camp-yon**, *s.* [CAMPION, CHAMPION.]

căm'-schō, căm'-schol, *a.* [Etymology doubtful. Cf. *camous*.]

1. Crooked.

"The hornyt byrd quhilk we clepe the nicht onle,
Within hir cauerne hard I schoute and youle,
Laithely of forme, with crnkut *camoscho* beik;
Ugsum to here was hir wyld elrische shreik."

Douglas: *Virgil*, 202, 2.

2. Ill-humored, contentious, crabbed; denoting crookedness or perverseness of temper.

căm-shach-le, căm-shauch-le (*ch* guttural), *v. t.* [From Scotch *cam*=crooked, and *shauchle* (q. v.).] To distort.

† *Shauchle* is to distort in one direction, *cam-shauchle* in two.

căm-stēa-rŷ, căm-stē-rie, căm-stai-rie, *a.* [Gael. *comhstri*=striving together.] Froward, perverse, unmanageable.

"... lies a *camsteary* child, and fasheous about marches."—Scott: *Guy Mannering*, ch. 1.

căm-stōne, *s.* [Etymol. of first syllable doubtful. Cf. Gael., & *cam*=bent, and Eng. *stone*.]

1. Common compact limestone, probably of a white color.

"At the base of the hill, immediately after the coal is cut off, you meet with several layers of *camstone* (as it is termed with us), which is easy [easily] burned into a heavy limestone."—P. Campsie: *Stirlings. Statist. Acc.*, xv. 327.

2. White clay, somewhat indurated.

căm-strūd'-geōŷs, *a.* [Probably from the same as *Camsteary*.] Perverse, unmanageable. (Scotch.)

***cā-mŷs**, *s.* [CAMIS.]

"And was yelad, for heat or scorching air,
All in silken *camus*, lily white,
Purled upon with many a folded plight."

Spenser: *F. Q.*, II. iii. 26.

cā-mŷs, cā-mŷse, *a.* [CAMOUS.]

***cā-mŷsed**, *a.* [CAMOUSED.]

"She was *camused*."—Gower: *C. A.*, ii. 210.

căm-wood, *s.* [From the native word *kambi*.] A wood produced by a leguminous plant, *Baphia nitida*. It is a dyewood, used with alum and tartar as a mordant; but the color is not permanent. It is employed for dyeing bandana handkerchiefs, the hue being deepened by the addition of sulphate of iron. Turners use it for making knife-handles, and cabinet-makers for ornamental knobs to furniture. Camwood is called also BARWOOD and RINGWOOD.

"A red dyewood first brought from Africa by the Portuguese. It is principally obtained from the vicinity of Sierra Leone, where it is called *kambi*; whence its name of *cam* or *kamwood* has obviously been derived. The coloring matter which it affords differs but little from that of ordinary Nicaragua wood."—McCulloch: *Dictionary of Commerce*.

***cam-y**, *a.* [Cam, *a.*; -y.] Crooked, rugged.

"Of *camy* ege and holtis fare to se."

Douglas: *Virgil*, 237, 1.

căn, *con, *conne, *cun, *kan (*pres.*), *could, *couth, *kuth, *couthie, *kuthie*, *v. t. & i.* [A. S. *cunnan*=(1) to know, (2) to be able, which has the present tense as follows: *ic can, thu canst, he can, we, ye, they cunnan*; in the past tense the forms are *cudhe* in the sing., and *cudhon* in the plur., whence comes the modern *could*, the *l* in which is a pure blunder, and has been inserted from a supposed analogy with *would* and *should*, in which the *l* belongs to the root. Icel. *kenna*; Swed. *känna*; Dan. *kende*; Dut. *kennen*; O. H. Ger. *kunnan*; M. H. Ger. *kunnen*; Ger. *kennen*. ***A. Transitive:**

*1. To know.

"He was litel worthe, and lesse he *coud*."

Chaucer: *Troilus*, ii. 5.

"She *could* the Bible in the holy tongue."

Ben Jonson: *Magnetic Lady*, i. 1.

"And *can* you these tongues perfectly?"

Beaum. & Flet.: *Coxcomb*.

† In this sense we have the phrases *to can thanks, con thanke*=to acknowledge or recognize one's obligation, to render thanks to another, and *to can maugre*, the reverse in meaning=to feel no indebtedness, or almost to owe a grudge to another. [MAUGRE.] (Compare the German *dank wissen*; the French *savoir gré*; and the Lat. *gratias meminisse*.)

"I *con* the grete *thanke*."—William of Palerne, 207.

"I *can* thee *thanke* that thou canst such answers deuine."—Udall: *Roister Doister*, p. 17.

*2. To have the power of, to be able to do.

"To change the will
Of Him who all things *can*."

Căn-ā'-da, s. & a. [Etym. doubtful; said to be from Sp. *aca*=hither, here, and *nada*=nothingness, nothing. When the Spaniards had searched in the region unsuccessfully for gold they were wont to exclaim, *Aca nada*=there is nothing here. When the French next presented themselves in quest of the precious metals, the Indians, wishing to discourage them from settling, used the same Spanish words—*Aca nada*, which they mistook for the name of the country. Objections to this explanation will at once suggest themselves. More probably Canada is from some Indian word.]

A. As substantive:

Geog.: A widely-extended region on the north or left bank of the St. Lawrence River and its great lakes. The country is said to have been discovered by Giovanni and Sebastian Cabot in 1497. The French assumed nominal possession of it in 1525, but did not establish the first permanent settlement in it till 1608. In 1759, Quebec, the capital of Canada (Lower Canada), was taken by General Wolfe, and in 1763 the whole territory was formally ceded to the English by the Treaty of Paris. In 1867, Upper and Lower Canada (Ontario and Quebec), with Nova Scotia and New Brunswick, were united into a Dominion, to which it is expected that other provinces will yet adhere.

B. As adjective: (See the compounds.)

Canada-balsam, *s.* A pale balsam, resin, or oleo-resin, obtained by incision from a Canadian tree, the American Silver-fir, sometimes called the Balm of Gilead Fir (*Abies balsamea*). Canada-balsam is of the consistence of thin honey, drying slowly by exposure to the air into a transparent adhesive varnish. It is used to mount objects for the microscope and for other optical purposes. Thus, when it is sought to cut thin a piece of fossil wood, or anything similar, so as to subject it in favorable circumstances to microscopic examination, it is affixed to a more massive body by Canada-balsam.

Canada-rice, *s.* A grass, *Zizania aquatica*.

Tennyson: *Arab. Nights*, 25.

*2. Any channel or means of communication.

II. Technically:

1. *Hydraulic Engineering*: In the same sense as I. 1.

2. *Hist.*: The Egyptians very early made a canal connecting the Nile and the Red Sea. It was reopened by Pharaoh Necho about 605 B. C., and at intervals by others after him. Most of the ancient nations had canals. The great canal of China was constructed partly in the seventh and partly in the ninth century, A. D.; it is 825 miles long. The first known English canal was cut by the Romans at Caerdike. The Trent and the Witham were joined in 1134, and the Bridgewater canal was commenced in 1759. The Caledonian canal was projected in 1803, but not opened till 1822. The Erie canal was begun in 1817 and completed in 1825. The Amsterdam, or Great North Holland canal, was completed in 1825. It is 125 feet wide at the water surface, 88 feet and 7 inches wide at the bottom, and has a depth of 20 feet; it extends from Amsterdam to the Helder, 51 miles. The Languedoc, or Canal du Midi, connecting the Atlantic with the Mediterranean, was completed in 1861; its length is 148 miles; it has more than 100 locks and about 50 aqueducts, and its highest part is 600 feet above the sea; it is navigable for vessels of upward of 600 tons. The Suez canal, connecting the Mediterranean and the Red Sea, was opened on November 17, 1869. Its length is 99 miles, with a width of 327 feet for 77 miles, and 196 for the remaining 22 miles. Its depth is 26 feet. Its success suggested the project of cutting through the isthmus joining North and South America. This undertaking, begun by the renowned engineer of the Suez canal, M. de Lesseps, was, after a prosecution to a stage near completion, temporarily abandoned in the year 1892, as a result of a terrific scandal, in which nearly every functionary connected with the enterprise was involved. In June, 1902, Congress authorized the purchase of the French company's property for \$40,000,000, and provided for the completion of the canal by the U. S. government provided the French company could give title and the Colombian government were willing to give the U. S. control of the necessary tract of land. The great Manchester ship canal, extending from Eastham (the head of navigation of the Mersey river near Liverpool) to Manchester, England, was formally opened January 1, 1894. The Corinth ship canal across the Isthmus of Corinth was formally opened by King George of Greece Aug. 6, 1893. It is nearly 4 miles long, 80 feet 8 1/2 inches wide, 24 feet 3 inches deep, and cost \$15,000,000. June 20, 1895, the great Baltic and North Sea canal was formally opened by the German emperor in presence of a navy representing all nations. Work began on the great Chicago drainage canal September 7, 1892, and was completed by January 18, 1900. The main channel is 29 miles long, of which about 9 miles was cut through solid rock. The total length of the waterway is 42 miles. In rock the minimum depth of the channel is 22 feet, with a width of 160 feet on the bottom in rock, which makes it the largest artificial channel in the world.

3. *Anat.*: A duct in the body for the passage of liquids or solids.

"In the cells of the Brain, and *Cannals* of the Sinewes . . ."—Bacon: *Nat. Hist.*, No. 30.

4. *Zoölogy*:

(1) A channel or groove into which the aperture of carnivorous univalve mollusks is produced. In distinction from this, vegetable feeding univalves have the aperture of the shell entire.

(2) A channel in some actinzoa.

(3) A channel or tube in some sponges. Such tubes are of two kinds, incurrent or afferent canals, and excurrent or efferent canals.

5. *Bot.* (of the petal of a flower): A canal leading to the central cell of the archegonium.

¶ (1) *Air-breathing cells*: The name given by Meyen and Leitgib to lacunæ in cellular tissue produced simply by the amplification of the intercellular spaces, and the separation of the cells without tearing.

(2) *Intercellular canals*: Canals arising from the spaces left between cells which do not completely touch each other. (R. Brown.)

"The hale *cannailye*, risin, tried
In vain to end their gabblin."

Nicol: *Poems*, i. 37.

ca-nard', s. A false report; a silly rumor.

The word was coined from the French *canard*=a duck, and arose from the story of cannibalism among a flock of ducks, who ate one of their number each day until at last they were reduced to one individual, the survivor having thus, it was argued, eaten all his companions. The story was the "rage" in Paris for a time, and afterward when any marvelous recital was heard, the auditor would shrug his shoulders and exclaim, "C'est une *canard*!"

căn-ar-i'-na, s. [From Eng., &c., *Canary*=the islands where the plant grows [CANARY], and fem. sing. suff. -ina.]

Bot.: A genus of plants, order Campanulaceæ. *Canarina campanula* is said to be eatable. (Lindley.)

can-är'-i-üm, s. [From Lat. *canarius*, as *a.*=pertaining to dogs; as *s.*=a kind of grass, from *canis*=a dog.]

Bot.: A genus of plants, order Amyridaceæ. The gum of *Canarium commune* has the same properties as Balsam of Copaiva. The nuts are eaten in the Moluccas and Java, but are apt to bring on diarrhoea. An oil is expressed from them, used at table when fresh and burned in lamps when stale. (Lindley.) *C. strictum* is the White Dammar-tree of Malabar. [DAMMAR.]

† **Tropic of Cancer:** [TROPIC.]

4. **Med.:** A malignant growth which is found in different parts of the human body, having a tendency to spread more or less rapidly and ultimately to terminate in death. Cancer is an inherited disease, and its growth is in all probability due to some peculiar morbid material separated from the blood, and which is constantly being renewed. Two kinds of cancer are usually described, viz., schirrus or hard cancer, and medullary or soft cancer; but there are several varieties of the latter. Hard cancer occurs most frequently in the female breast, axilla, parotid gland in the neck, and in the rectum. Soft cancer affects for the most part the internal organs, as the liver, spleen, kidneys, stomach, &c.; but there is scarcely any organ or tissue of the body which may not become the seat of this form of the disease. Hard cancer rarely occurs until after forty years of age, and is usually slow in its progress. Soft cancer, on the other hand, is most common in early life, and generally runs a very rapid course. Cancers may, under certain circumstances, be removed by surgical operation, but they are almost certain to return.

"*Canker*, sekenesse. *Cancer.*"—*Prompt. Parv.*

candy-mustard, s. The same as CANDY-TUFT (q. v.). (Britten & Holland.)

candy-tuft, s. A name applied to several species of *Iberis* (q. v.). The name was originally given to the *I. umbellata*, first discovered in Candia.

căn'-dỹ-ing, pr. par. a. & s. [CANDY, v.]

A. & B. *As pr. par. & particip. adj.*: In senses corresponding to those of the verb.

C. *As subst.*: The act or process of becoming candied or crystallized.

câne (1), *canne, s. & a. [Fr. *canne*; O. Fr. *canes* (pl.) = woods; *canes*, *canes*, *keynes* = oaks (*Kelham*); Wel. *cawnen* = cane, reed; Sp. & Port. *cane*; Ital. & Lat. *canna*; Gr. *kanna*, *kannē* = a reed or cane, or anything made from it; Arab. *qanāt*; Heb. *qāneh*. See II. 2.]

A. As substantive:

I. Ordinary Language:

1. A name given to various plants with reedy stems. (II. 1.)

(1) *Gen.*: In the foregoing sense.

(2) *Specially*:

(a) The rattan (*Calamus rotang*). [CALAMUS, RATTAN.]

(b) The sugar-cane (*Saccharum officinarum*).

"Has God then given its sweetness to the cane,
Unless His laws be trampled on—in vain?"
Cowper: *Charity*, 190.

2. Anything made of small plants with reedy stems.

(1) A lance or dart of cane.

"Judge-like thou sitt'st, to praise or to arraign
The flying skirmish of the darted cane."
Dryden: *Conquest of Granada*, Pt. I., i. 1.

(2) A slender walking-stick, thicker than a switch and more slender than a staff.

"With cane extended far I sought
To steer it close to land."

Cowper: *The Dog and the Water Lily*.

II. Technically:

1. *Bot. & Com.*: A name for various endogenous plants of thin but tenacious woody stem. These belong chiefly to the orders Grammeæ and Palmaceæ. For different kinds of "canes," see bamboo, rattan, reed, sugar-cane, &c.

2. *Script.*: The "sweet cane" of Scripture, Heb. *qāneh* (Isaiah xliii. 24); *qāneh hattob* lit. = the good cane (Jerem. vi. 20), is probably a grass, *Andropogon calamus aromaticus*, which is a native of India.

"Thou hast bought me no sweet cane with money . . ."
—Isa. xliii. 24.

"To what purpose cometh there to me incense from Sheba, and the sweet cane from a far country."—Jer. vi. 20.

† The same word, *qāneh*, is translated *calamus* in the Song of Solomon iv. 14, and Ezekiel xxvii. 19, and may be the above-mentioned *Andropogon*; or, if not, then *Acorus calamus* (q. v.). The *calamus* of Exodus xxx. 23 is in Heb. *qāneh bosem*, *qāneh* being the constructive state of *qāneh*. It may be *Acorus calamus*. The reed of Isaiah xxxvi. 6 is also *qāneh*, and may not be limited to one species.

3. *Weights & Meas.*: A measure of length used in some parts of Europe. At Naples it is 7 feet 3¼ inches; at Toulouse, 5 feet 5½ inches, and in Provence 6 feet 5½ inches.

4. *Hydraul.*: A device for raising water. [HYDRAULIC CANE.]

B. *As adj.*: Pertaining to or resembling the cane; consisting of canes.

cane-apple, s. A plant, *Arbutus Unedo*.

cane-brake, s.

1. *Lit.*: A brake or thicket composed of cane; what is called in India *bamboo-jungle*, or anything similar. (Chiefly American.)

2. *Bot. & Ord. Lang.*: The English name of the genus *Arundinaria*.

cane-chair, s. A chair constructed entirely of, or having its seat alone made of rattan (*Calamus rotang*), either in its integral form or riven in splints. The latter are plaited together after the fashion of a loose-woven web or wicker work to form the seat, back, &c., of the chair.

cane-gun, s. A weapon comprising a gun-barrel with its discharging devices, arranged within the shaft of a cane so as to present the appearance of an ordinary walking-stick. (Knight.)

cane-harvester, s. A machine for cutting sugar-cane or sorghum in the field. Essentially, it differs but little from the CORN-HARVESTER (q. v.).

cane-hole, s. A hole or trench on sugar plantations, in which canes are planted.

cane-juice, s. The juice of the sugar-cane.

"The first of these writers [Lucan] in enumerating Pompey's eastern auxiliaries, describes a nation who made use of the cane-juice as a drink."—Grainger: *Sugar-Cane*, bk. i., note.

Cane-juice bleacher: An apparatus for decolorizing cane-juice by means of sulphurous acid vapor. (Knight.)

cane-knife, s. A knife like a sword or Spanish machete, used for cutting standing cane. It has a blade from 18 to 24 inches long, and is made in various patterns for the Southern or South American market. (Knight.)

cane-mill, s. A machine for grinding sugar-cane or sorghum-stalks.

cane-polishing, a. Polishing or designed to polish canes.

Cane-polishing machine: A machine for polishing the hard siliceous cuticle of rattan-splints after they are split and rived from the cane. [RATTAN, CANE-WORKING MACHINE.]

cane-press, s.

Sugar-making: A machine for pressing sugar-canes. In that of Bessemer there is a plunger reciprocating in a trunk into which the cane is introduced transversely. At each stroke of the plunger a length of cane is cut off, and jammed against the mass of cut cane, which is ultimately drawn out at the open end.

cane-scraper, s.

Chair-making, &c.: A machine for cutting away the woody fiber from the back of a splint of rattan, to make it thin and pliable. (Knight.)

cane-splitter, s.

Chair-making, &c.: A machine for cutting and riving splints from rattan. [CANE-WORKING MACHINE.]

cane-stripper, s.

Sugar-making: A knife for stripping and topping cane-stalks.

cane-sugar, s. [SUGAR.]

cane-sword, s. A long dagger inserted into a walking-cane, the handle of the cane forming the hilt of the dagger, and the body of the cane serving as a sheath or scabbard. [See SWORD-CANE.]

cane-trash, s. Refuse of sugar-canes or macerated rinds of cane, reserved for fuel to boil the cane-juice.

cane-working, a. Working or designed to work cane.

Cane-working machine:

Chair-making, &c.: A machine for working cane. (Used specially of cane-splitters, planers, scrapers, shavers dressers, reducers, and polishers.) (Knight.)

câne (2), cāin, kāin, s. & a. [From Low Lat. *canum*, *cana* = tribute; Gael. *ceann* = the head.]

A. *As subst.*: A duty paid by a tenant to his landlord in kind. (Jamieson.)

B. *As adj.*: Designed to be given to a landlord, as *cane-cheese*, *cane-fowls*. [CAIN, CANAGE.]

câne, v. t. [From *cane* (1), s. (q. v.)]

1. *Of a chair, &c.*: To affix rattan to suitable parts of it.

2. *Of a person*: To beat with a cane or thin stick.

"Or would it tell to any man's advantage in history that he had *cand* Thomas Aquinas."—De Quincey: *Works* (ed. 1863), vol. ii. p. 93.

bōil, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, †his; sin, a; expect, Xenophon, exist. ph = f. -cian, -tian = shān. -tion, -sion = shūn; -tion, -sion = zhūn. -tious, -cious, -sious = shūs. -ble, -dle, &c. = bel, del.

cāned (1), *pa. par. & a.* [CANE, v.]

cāned (2), *a.* [Lat. *canus*=white, from the color of the mold.] Molded or turned sour. (Applied to vinegar or ale.)

"*Caned. Acidus.*"—*Cathol. Anglicum* (ed. Hertridge).

***can-el** (1), ***can-ele**, ***can-elle**, ***can-ylle**, *s.* [Fr. *cannelle*; Sp. *canela*; Ger. *kaneel*; Dan. *kanel*; probably from Lat. *canalis*, from the hollowness of the stalks.] Cinnamon.

"In Arabia is store mir, and canel."—*Trevisa*, i. 99.

"*Canel or chanelle. Canalis.*"—*Prompt. Parv.*

***canel-bone**, ***canelboon**, *s.* [CANAL-BONE.]

ca-něl-lā, *s.* [Lat. dim. of *canna*=a reed, from the shape of the rolled-up bark.]

Bot.: A genus of plants, belonging to the order Guttiferae, but of which the affinities are so doubtful that it has been made the type of a distinct order, Canellaceae (q. v.). They are ornamental shrubs or trees. *Canella alba* is a common West Indian aromatic evergreen shrub. It is called also Wild Cinnamon.

canella alba, *s.*

Bot. & Com.: The botanical and commercial name of a cheap aromatic bark, chiefly obtained from the Bahamas. (*Craig.*)

canella-bark, *s.*

Bot.: The bark of *Canella alba*. [CANELLA.] It is called in the Bahamas White-wood Bark, from the color of the trees from which it has been stripped. It yields by distillation a warm aromatic oil, which is carminative and stomachic. In the West Indies it is often mixed with oil of cloves. (*Lindley, &c.*)

canella de chevro, *s.* The Brazilian name for an oil distilled from the fruit of *Oreodaphne opifera*, a lauraceous tree growing abundantly in South America between the Orinoko and the Parime rivers. The oil is limpid and volatile, of a yellow wine color, an aromatic acrid taste, and a smell as if old oil of orange-peel had been mingled with that of rosemary. An oil which gushes copiously from the tree itself when incisions are made into it, is considered to be a powerful discutient.

cān-ěl-lā-çē-æ, *s. pl.* [From Mod. Lat. *canella* (q. v.), and fem. pl. suff. -*aceæ*.]

Bot.: A family of plants established by Von Martius, though not universally accepted by other botanists. Calyx leathery, of three imbricated sepals; petals five, twisted in aestivation; stamens about twenty, united into a column, with the anthers sessile on the outside; ovary one-celled, with two or three ovules. Of doubtful affinity. Probably akin to Bixaceae. (*Lindley, &c.*) [CAN-ELLA.]

cān-ěl-lē-ā-çē-oūs, *a.* [Lat. *canella*; Eng. adj. suff. -*aceous*.]

Bot.: Pertaining to the order of plants of which Canella is the type. (*Craig.*)

cā-nēs, *s. pl.* [Lat. *canis*=a dog.]

canes venatici, *s. pl.* [Lat. *canes*=dogs; *venatici*=pertaining to hunting; *venor*=to hunt.]

Astron.: The Greyhounds, the name of two northern constellations, in which Hevelius, by whom it was formed, reckoned twenty-five stars, but the British catalogue only ten.

†ca-nēs-çent, *a.* [Lat. *canescens*; pr. par. of *canesco*=to become white, *canéo*=to be white.] Become white in color, assuming a white color.

***cān-ē-vās**, *s.* [CANVASS.]

"On the floor y-cast a canevas."

Chaucer: C. T., 12,866.

cāng, *s.* [Chinese.] A wooden collar, generally of fifty to sixty pounds weight, worn around the neck as a legal punishment in China. It is called also *kea*. (*Sir George Staunton, J. F. Davis, &c.*)

cān-gān, *s.* [Chinese.]

Fabrics: Chinese coarse cotton cloth. It is in pieces six yards long, nineteen inches wide, and has a fixed currency value. (*Knight.*)

cān-gī-çā, *s. & a.* [A Brazilian word.]

cangica-wood, *s.* Called also *Angica*. It is of a rose-wood color, and is imported from Brazil in trimmed logs, from eight to ten inches in diameter. As a variety in cabinet work small quantities of this wood are employed. (*Ure.*)

cān-gle (*g* silent), *v. i.* [Perhaps a variant of *jangle*, or from Gael. *caingnam*=to argue, plead.] To quarrel, argue, dispute.

"Ye cangle about uncoft kids."—*Ramsay: Scotch Prov.*, p. 81.

cāng-lēr, *s.* [*Cangl(e)*; -*er*.] A jangler. (*Scotch.*)

cangue (*ue* silent), *s.* [Chinese *kang*=to bear, and *kia*=a yoke or wooden collar.] A portable pilory used in China for the punishment of convicts, petty offenders sometimes being required to wear it for a period of ninety days, during which time they are utterly unable to help themselves.

fāte, **fāt**, **fāre**, **amidst**, **whāt**, **fāll**, **father**; **wē**, **wēt**, **hère**, **camel**, **hēr**, **thère**; **pīne**, **pīt**, **sīre**, **sīr**, **marine**; **gō**, **pōt**, **or**, **wōre**, **wolf**, **wōrk**, **whō**, **sōn**; **mūte**, **cūb**, **cūre**, **unite**, **cūr**, **rūle**, **fūll**; **trȳ**. Sȳrian. æ, œ = ē; ey = ā. qu = kw.

can-ic-u-lā, **cān-ic-ūle**, *s.* [Lat. *canicula*; dim. of *canis*=a dog.]

Astron.: The constellation known as the Dog-star, the principal star in which, Sirius, rises heliacally between the 15th of July and 20th of August.

"Among all these inconveniences, the greatest I suffer is from your departure, which is more afflicting to me than the canicule."—*Addison: Letter in the Student*, ii. 89.

can-ic-u-lar, *a.* [Fr. *caniculaire*; Lat. *canicularis*; from *canicula*=a little dog; dimin. of *canis*=a dog.] Of or pertaining to Canicula, or the Dog-star.

canicular days, *s. pl.* The dog-days—the period during which the dog-star rises and sets with the sun, viz., July to August. In old, and indeed till comparatively recent times, the great heat, and the consequent diseases which are prevalent at this time of the year, were popularly ascribed to the influence of this star.

"In regard to different latitudes, unto some the *canicular days* are in the winter, as unto such as are under the equinoctial line; for unto them the dog-star ariseth when the sun is about the tropic of Cancer, which season unto them is winter."—*Browne: Vulgar Errors*.

canicular year, *s.* The Egyptian year, computed from one heliacal rising of the dog-star to another.

cān-ī-dæ, *s. pl.* [From Lat. *canis*=a dog, and fem. pl. suff. -*idæ*.]

1. *Zoöl.*: A family of mammals belonging to the order Carnivora, and the section Digitigrada. The muzzle is more or less pointed, the tongue smooth, and the claws non-retractile, the last-named character distinguishing it from the Felidae. The fore feet have five toes each, and the hind ones four. Molar teeth, $\frac{5}{5}$ or $\frac{7}{7}$. The carnassial has a heel or process. It contains the Dogs, Wolves, Foxes, and Jackals. It is akin to the Hyænidæ (q. v.).

2. *Palæont.*: Canidæ have been found in the Eocene, but this may not have been the first appearance of the family in geological time. There are fossil as well as recent genera known.

can-īe, **cān-nīe**, *a.* [CANNY.] Gentle, mild; dexterous.

"Then cannie, in some cozie place,

They close the day."

Burns: To James Smith.

A. As adjective:

1. *Ord. Lang.*: Of or pertaining to dogs, having the nature or qualities of a dog; dog-like.

"A kind of women are made up of canine particles: these are scolds, who imitate the animals out of which they were taken, always busy and barking, and snarl at every one that comes in their way."—*Addison*.

"Savages now sometimes cross their dogs with wild canine animals, to improve the breed."—*Darwin: Origin of Species* (ed. 1859), ch. i., p. 34.

2. *Med.*: Unnatural, insatiable.

"It may occasion an exorbitant appetite of usual things, which they will take in such quantities till they vomit them up like dogs; from whence it is called canine."—*Arbuthnot*.

B. As subst.: A canine-tooth.

"The more perfect quadrupeds have three sorts of teeth, termed incisors, canines, and molars. . . . The canines follow the incisors, and occupy an intermediate station between them and the molars; they are only employed in tearing or holding; hence they are chiefly confined to quadrupeds who live upon animal matter, and are wanting in the herbivorous ruminants, to whom, in fact, they are unnecessary."—*Swainson: Natural History of Quadrupeds*, § 71.

canine-letter, *s.* The letter *r*, from its sound.

canine-madness, *s.* [HYDROPHOBIA.]

canine-teeth, *s. pl.*

căn-na (1), s. [Lat. *canna*; Gr. *kanna*, *kannē* = a reed.]

Botany:

1. Sing.: A genus of plants belonging to, if not even typical of, the endogenous order Marantaceæ. [CANNACEÆ.] They have beautiful red or yellow flowers. *Canna indica* is the Indian shot or Indian bead, a native of Asia, Africa, and America; it is common and in flower most of the year in Indian gardens. The seeds have been used as a substitute for coffee, and they moreover furnish a beautiful but not a durable purple. A kind of arrowroot is extracted in the West Indies from a species believed to be *C. Achiras*. The fleshy corms of some cannas are said to be eaten in Peru, and according to Von Martius those of *C. aurantiaca glauca* and others are diuretic and diaphoretic, acting like orris-root.

2. Pl.: Jussieu's name for an old endogenous order of plants, now separated into two, viz., Zingiberaceæ and Marantaceæ (q. v.).

căn-nĩ-bal, *căn-ĩ-bal, s. & a. [Sp. *cannibal*, a corruption of *Caribal*=a Carib. Probably the form of the word has been influenced by the Lat. *canis*=a dog; *caninus*=pertaining to a dog, as descriptive of or applicable to the low or revolting practice of cannibalism. (Trench: *On the Study of Words*, p. 136-7.)]

A. As subst.: One who eats human flesh, a man-eater; an anthropophagite.

"The Caribes learned to be men-eaters or *cannibals*."—*Hackluyt: Voyages*, iii. 576.

"The cannibals that each other eat;

The anthropophagi."—Shakesp.: *Othello*, i. 3.

"There is an island in the Gulf of California, not more than sixty miles from the Mexican mainland, which is inhabited by the remnants of a race of giant cannibals. This startling discovery was made by a West Coast naturalist early in 1891, and has since been confirmed both by United States and Mexican explorers. Some of them are over seven feet in height. The island upon which they were found is known as the Island or Isle of Leri. There is every evidence of cannibalism among them."—*St. Louis Republic*.

B. As adjective:

1. Lit.: Of or pertaining to a man-eater.

*2. Fig.: Applied to anything exceedingly barbarous or revolting.

" . . . in a grand chamber, a' hung wi' black, and lighted wi' wax *cannie*."—*Scott*: *Antiquary*, ch. xxvi.

căn-nĩn (1), *s.* & *a.* [Trench thinks it was derived from Gr. *kanna*=a reed or cane, to which the hollowness and comparative straightness of cannon give some resemblance. He points out that the word *rohr*, in German, also first signified a cane or reed, but was afterward applied also to the barrel of a gun. (*Trench*: *On the Study of Words*, p. 191.) A doublet of CANON (q. v.). (*Skeat*.)]

A. As substantive:

1. Ordinary Language:

*1. A tube. [CANON.]

2. A piece of ordnance. [II.]

"If I say sooth, I must report they were
As cannons overcharged with double cracks."
Shakesp.: *Macbeth*, i. 2.

"Then banners rise, and cannon-signal roars."
Scott: *The Vision of Don Roderick*, v. 56.

II. Technically:

1. *Mil.*: A conical tube of iron, brass, or steel for discharging projectiles. Its external parts are called cascabel, first re-enforce, second re-enforce, chase, muzzle. It is supported on carriages by short arms on each side, forming part of the gun, called trunnions. The bore may be cylindrical or chambered, smooth or rifled. It may be loaded at breech or muzzle. It was first introduced in Europe in the fourteenth century; made of longitudinal iron bars hooped with rings; charge contained in a separate chamber placed in a socket in the breech; shot of lead, iron, or stone. Used by Edward III., at Calais, 1346; by Venetians, at Chioggia, 1366; in the field at Cressy, 1346; at Bruges, by the Gantois, 1382; and at Constantinople, by Turks, in 1394. Brass guns, introduced in the fifteenth century, as the "Messenger," at Aberystwith, throwing a 30-lb. shot; the "King's Daughter," at Harlech, one of 45 lbs. Mons Meg, at Edinburgh, caliber twenty inches; the Great Gun of Ghent, twenty-six inches; the English guns at Mont S. Michel, fifteen inches and nineteen inches, are bombards of this period. Designations of guns: Cannon Royal, Bastard Cannon, Half Cartham, Culverins, Demy-Culverins, Basilisk, Serpentine, Aspick, Dragon, Syren, Moyens, Rabinet, Falcon, Falconet, and Saker; the last three for field service. Sixteenth century: hollow bronze and iron guns first cast in England (1521 and 1547); made very long and charged with meal-powder; portable "hand-cannon" and small breech-loaders, as the "Paterara," still used; seige-guns threw a 79½-lb. shot. Seventeenth century: lighter field-guns and cartridges invented; Gustavus Adolphus employed copper guns covered with leather or rope. Eighteenth century: guns cast solid and then bored; carronades introduced. Nineteenth century: Rifled field-guns first employed, in 1859; since then rifling applied to all calibers. [GUN.]

2. *Mach.*: A metallic hub or sleeve, fitted to revolve on a shaft, or with it.

3. *Printing*: A large size of type, used for bills, posters, &c. [CANON, 3.]

B. As adjective: (See the compounds.)

cannon-ball, *s.*

Mil.: Applied generally to all iron projectiles fired from smooth-bore ordnance. They consist of solid and hollow cast-iron shot, steel or wrought-iron shot, grape, case, sand shot, common shells, diaphragm shrapnel shells, improved shrapnel shells, Martin's shells, carcasses, light balls (ground and parachute), and smoke balls. Stink balls and poisoned balls were formerly used by barbaric nations.

"Like feather-bed 'twixt castle wall,
And heavy brunt of cannon-ball,"
Butler: *Hudibras*.

Cannon-ball tree:

Bot.: A name given to a South American tree—*Couropita guianensis*—from the large size and globular shape of its fruit. It belongs to the order Lecythidaceæ. The fruit is vinous and pleasant when fresh, but emits an intolerably offensive odor when in a state of decay. It is known in Cayenne as the "Abricot Sauvage," i. e., Wild Apricot. The shells are used as drinking utensils; the seeds are eaten by monkeys.

cannon-bone, canon-bone, *s.*

Farriery:

1. The metacarpal bone, between the knee and fetlock joint of the fore-leg.

2. The metatarsal bone, between the hock and fetlock joint of the hind-leg.

***cannon-bullet**, *s.* A cannon-ball.

"The fixt stars are so remote from the earth, that, if a cannon-bullet should come from one of the fixt stars with as swift a motion as it hath when it is shot out of the mouth of a cannon, it would be 700,000 years in coming to the earth."—*Locke*: *Elements of Natural Philosophy*, c. 3.

cannon-casting, *a.* & *s.*

A. As adj.: Casting or designed to cast cannon.

B. As subst.: The art or operation of casting a cannon. The molds for brass cannon are formed by wrapping a long taper rod of wood with a peculiar soft rope, over which is applied a coating of loam, which, as the work proceeds, is dried over a long fire, a templet being applied to form the proper outline. This model is made about one-third longer than the gun is to be. It is next, when dry, blackwashed, and covered with a shell of loam not less than three inches thick, secured by iron bands, which is also carefully dried. The model is next removed by withdrawing the taper rod and the rope, and extracting the pieces of loam. The parts for the cascabel and trunnions are formed upon wooden models, and then attached to the exterior of the shell; handles, dolphins, or ornamental figures, are modeled in wax, and placed on the clay model previous to molding the shell, from which they are melted out before casting. The melted metal is then admitted to the bottom of the mold through two gates, one on each side, or in some similar way. Cannon are made solid, and are then bored by being made to revolve around a drill.

cannon-clock, *s.*

Ordnance: A cannon with a burning-glass over the vent, so as to fire the priming when the sun reaches the meridian. Such pieces were placed in the Palais Royal and in the Luxembourg, at Paris.

cannon-lock, *s.*

Ordnance: A contrivance placed over the touch-hole of a cannon to explode the charge.

All in a whirl."
Forbes: Dominie Deposed, p. 36.

căn-nỹ-něss, s. [CANNINESS.]

***ca-noa, s.** [Obsolete form of CANOE (q. v.).]

ca-nôe', *ca-noa, *can-now, *can-nowe, s. & a. [Sp. *canoa*, probably a West Indian or Caribbean word.]

A. As substantive:

1. *Originally*: A kind of boat in use among uncivilized nations. It is made either of the trunk of a tree hollowed out, or of pieces of bark or hide joined together. Some of the larger size carries sails, but they are generally propelled with paddles. The North American Indian made his canoe of cedar-wood covered with an unbroken sheet of the bark of the white birch. The Indians of the plains used buffalo-hide. In the wooded regions devoid of birch the canoe was a shaped and hollowed log, which was probably the primeval form throughout the world. The canoes of the Feejees are double, of unequal size, the smaller serving as an outrigger. Large ones are 100 feet in length. Captain Cook estimated the naval force of the Society Islands at 1,700 war-canoes, manned by 68,000 men.

"In a war against Semiramis they had four thousand monoxyla or canoes of one piece of timber."—*Arbutnot: On Coins*.

2. *Now*: A very little boat, narrow in the beam, propelled by paddles. It is generally of wood, but may be of galvanized iron, caoutchouc, and even of paper. One form of gentleman's canoe is about 13 feet long, 26 inches wide, 12 inches deep, and has a "comber" of two inches. The opening in the deck in which the voyager places himself is 4 feet long and 1 foot 8 inches wide. A canoe for two persons, sitting face to face, should be about two-thirds larger. Mr. McGregor traveled in the Rob Roy canoe about 3,000 miles. The favorite type of canoe in New York is called a Nautilus (q. v.). (*Knight, &c.*)

B. As adj.: (See the compounds.)

canoe-birch, canoe birch, s. A kind of birch—*Betula papyracea*.

canoe-wood, canoe wood, s. A magnoliaceous plant—the Tulip-tree (*Liriodendron tulipifera*).

ca-nôe', v. i. [CANOE, s.] To row or paddle in a canoe.

ca-nôe'-lîg, pr. par. & s. [CANOE.]

A. As pr. par.: In the same sense as the verb.

B. As subst.: The act or science of rowing or paddling a canoe.

ca-nôe'-ist, s. [Eng. *canoe*, and suff. *-ist* (q. v.).] One who rows or paddles in a canoe. (*American*.)

ca-nôe'-man, s. One who rows a canoe.

***can-ois, a.** [CANOUS.]

căn-ôn (1), s. & a. [Lat. *canon*; Gr. *kanôn*=(1) a straight rod or bar, (2) a rod used in weaving, (3) a rule or level used by masons in building. Metaphorically a rule as for the guide of conduct. In the ecclesiastical writers the books received as the rule of faith and practice; *kanē* or *kannē*=a reed or cane.] [CANNON.]

A. As substantive:**I. Ordinary Language:**

1. A rule, a regulation, a law.

"What is it, for example, that constitutes the difference between a fiction which observes all the *canons* of probability . . . and a true narrative?"—*Lewis: Credibility of the Early Roman History* (1855), ch. xiv.

(1) *Gen.*: In the foregoing sense.

(2) *Spec.*: A rule in ecclesiastical matters.

2. That which is established by rule. [II. (i) 1 (1).]

3. A person bound by rule. [II. (i) 2 (1).]

II. Technically:

(1) *Ecclesiol., Ch. Hist., &c.*:

1. *Of things*:

(1) The ordinances made by ecclesiastical councils for the regulation of religious matters. [CANON-LAW.]

(a) *Gen.*: In the foregoing sense.

"By an ancient *canon*, those who ministered at the altars of God were forbidden to take any part in the infliction of capital punishment."—*Macaulay: Hist. Eng.*, ch. xxii.

(b) *Spec.*: The rules and regulations laid down as the rule of life for those clergy who reside in community.

(2) The list or catalogue of saints.

(3) *Of the mass*:

(a) A rule instituted by Gregory the Great, providing for the celebration of the mass with more splendid accompaniments than had hitherto been in use.

"The new mode of administering the Lord's Supper, magnificently and with a splendid apparatus, or the *Canon of the Mass* as it is called, was an institution of Gregory the Great; or if it will be more satisfactory, he enlarged and altered this old *Canon*."—*Mosheim: Ch. Hist.* (ed. Murdock), Cent. VI., pt. ii., ch. iv., § 3.

(b) A portion of the service of the Mass, known as the *secreta*. It begins with the words, "*Te igitur*," &c.

2. *Of persons*:

(1) *In the Church of Rome*: A member of an order of religious persons intermediate between the regular monks and the secular clergy. The canons lived together, ate at the same table, joined in united prayer at stated hours, but did not take vows like those of the monks, besides which they officiated in certain churches. Chrodegang, Bishop of Metz, about the middle of the eighth century, is said to have instituted the order. At first the members were called *Fratres Domini* (the Lord's brethren), but afterward canons. Lewis the Meek caused rules to be drawn up for their guidance by the Council of Aix-la-Chapelle, A. D. 817, and instituted an order of canons. Having become corrupt, efforts for their reformation were made by Nicolaus II. in the Council at Rome, A. D. 1059. About the same time, some canons influenced by Ivo, afterward Bishop of Chartres, renounced private property, and became virtual monks. Hence arose the distinction between *secular* and *regular* canons, the former obeying the rule of Nicolaus II. and the latter following that of Ivo. Ivo's rule being almost the same that St. Augustine had before introduced in his see, the regular canons were often called Canons under the rule of St. Augustine, or simply Canons of St. Augustine. In the twelfth century mutual jealousy created a long and bitter controversy between the monks and the canons. An effort was made in the 17th century to restore the monastic and semi-monastic orders to their pristine purity, and the Reformed Canons regular of St. Augustine arose. Three other regular orders were abolished in 1668 by Pope Clement IX. (*Mosheim*.)

(2) *In the Church of England*: A certain dignity in cathedral churches; a residentiary member of a cathedral chapter.

"Swift much admires the place and air,
And longs to be a *canon* there.
A *canon*! that's a place too mean:
No, doctor, you shall be a dean.
Two dozen *canons* round your stall,
And you the tyrant o'er them all."—*Swift*.

¶ The name *Cannon* Street in London, having reference to the cathedral chapter of St. Paul's, is an indication of the identity of the two words *canon* and *canon*.

(ii) *Biblical Criticism and Church History*: Those books of Scripture which are received as inspired and canonical, as distinguished from the apocrypha. [II. 1.]

"*Canon* also denotes those books of Scripture, which are received as inspired and canonical, to distinguish them from either profane, apocryphal, or disputed books. Thus we say, that Genesis is part of the sacred *canon* of the Scripture."—*Ayliffe: Parergon Juris Canonici*.

¶ It is also applied to any one of the received books of the Old or New Testament.

1. *Old Testament Canon*: The ancient canon of the Old Testament is ordinarily attributed, on the

authority of Jewish Talmudic tradition, to Ezra (Esdras of the Apocrypha), and the most modern research admits that he at least took the first step in the work by lending strong public sanction to the Pentateuch, and giving it increased currency (Ezra vii. 6, 10, 11; Neh. viii. 1-8, 13-18; 1 Esdr. viii. 3, 7, 9, 19, 23; ix. 39, 40, 42, 45, 46; 2 Esdr. xiv. 21, 22, 25, 26).

A great addition to this first canon seems to have been made by Nehemiah, of whom it is said in 2 Macc. ii. 13, "The same things also were reported in the writings and commentaries of Neenias, and how he, founding a library, gathered together the acts of the kings and the prophets, and of David, and the epistles of the kings concerning the holy gifts." By these designations probably were meant the books from Joshua to 2 Kings, inclusive, the four greater and most of the minor prophets, with some of the Psalms.

A third canon seems hinted at in 2 Macc. ii. 14: "In like manner also Judas gathered together all those things that were lost by reason of the war we had, and they remain with us." By Judas is meant Judas Maccabæus. His canon seems to have added Proverbs, the Song of Solomon, Daniel, some of the Psalms, &c., or, speaking broadly, the books called Kethubim in Hebrew, or in Greek Hagiographa. Doubts about the canonicity of parts of Ezekiel, and the whole of Ecclesiastes, Canticles, Esther, and Proverbs, were not set at rest till a decision in their favor was obtained from the Jewish Synod of Jabneh, or Jamnia, about A. D. 90. Josephus soon afterward arbitrarily fixed the Old Testament books at twenty-two, to make them agree in number with the letters of the Hebrew alphabet, and the Talmud at twenty-four, because that is the number of the Greek alphabet. All the thirty-nine books in our modern Bibles found a place, separate or combined, in those enumerations. Jerome also, like Josephus, made twenty-two, a number which the Council of Carthage, A. D. 397, much enlarged by taking in the Apocrypha. [APOCRYPHA.]

2. *New Testament Canon*: The germ of what afterward became the New Testament canon was in existence when the Second Epistle of Peter was written (2 Pet. iii. 15, 16). About A. D. 144 the "heretic" Marcion came from Pontus to Rome, bringing with him a collection of sacred books, viz., the Gospel of St. Luke and ten Pauline epistles, those of Timothy and Titus being omitted. According to Dr. Samuel Davidson, the idea of an inspired New Testament canon and of a Catholic church came into existence together about 170 A. D. The canon which then grew up consisted of two parts, the Gospel [Gr. *to euangelion*], and the Apostle [Gr. *ho apostolos*], the former containing the four gospels, the latter the Acts of the Apostles, thirteen epistles of St. Paul, one of St. Peter, one of St. John, and the Revelation. The canon of Muratori, about the same date, differs in omitting 1 Peter and including 2 and 3 John, as also Jude. Irenæus, Clement of Alexandria, and Tertullian, had all their separate canons. Origen, about A. D. 254, recognized three classes of books—those generally admitted, those not authentic and those doubtful. Similarly Eusebius, A. D. 340, divided the sacred writings into three classes—those generally received [Gr. *homologoumena*] and those controverted [Gr. *antilegomena*], and those heretical. The canon of the New Testament, in the form in which we now have it—except that the Apocalypse was ignored—was settled by the Council of Laodicea, A. D. 367, and confirmed by the 14th Council of Carthage, A. D. 397, one of the members present at which being the celebrated Augustine. (*Dr. Samuel Davidson: Canon, &c.*) [BIBLE.]

(iii) *Law*:

1. *Eccles. Law*: [CANON LAW.]

2. *English Civil Law*: A rule. Used specially in the expression *Canons of Inheritance*, which are the rules regulating the descent of real property when the owner or "purchaser" dies intestate. The Act of Parliament determining such cases is 3 and 4, Wm. IV., c. 106. (*Wharton*.)

(iv) *Music*: A species of musical composition, written according to strict rule (hence the term), in which the different voices take up the same melody, one after another, either at the same or at a different pitch.

"A *canon* at the unison becomes a round, if the antecedent has a cadence before the entry of the consequent."—*Stainer & Barrett*.

(v) *Printing*: A size of type equal to 4 lines pica, probably so called from having been first employed in printing the canons. It is used for posters and handbills.

(vi) *Math.*:

1. A general rule for resolving all problems of the same kind.

2. A set of mathematical tables, as "a canon of logarithms," "a canon of sines," &c.

(vii) *Surg.*: An instrument used in binding up wounds.

(viii) *Farriery*: Canon-bone. [CANNON-BONE.]

(ix) *Mech.*: The part of a bell by which it is suspended; otherwise called the ear.

bôil, bôy; pout, jowl; cat, cell, chorus, chin, bench; go, gem; thin, this; sin, as; expect, Xenophon, exist. ph = f.
-cian, -tian = shan. -tion, -sion = shün; -tion, -sion = zhün. -tious, -cious, -sious = shüs. -ble, -dle, &c. = bel, del.

B. As adj.: (See the compounds.)

***canon-bitt, s.** That part of the bit which is placed in the horse's mouth.

"A goodly person, and could manage fair
His stubborn steed with *canon-bitt* . . ."
Spenser: F. Q., I. vii. 37.

canon-law, s. The body of ecclesiastical law as laid down by the canons.

"This is mere moral babble, and direct
Against the *canon-laws* of our foundation."
Milton: Comus, 808.

History of the Canon Law:

(1) *Before the Reformation:* A community, civil or religious, no sooner comes into existence than it requires rules for its government, and those first formed require to be modified and developed and added to during the whole period that the community exists. Hence the first germs of the canon law are to be sought for in apostolic times, while its complete development took place at the period when the power of the papacy reached its height. The oldest canons are called Apostolic canons (q. v.). The canons of the Councils of Nice (A. D. 325), Constantinople (A. D. 381), Ephesus (A. D. 431), and Chalcedon (A. D. 451), obtained civil sanction by decree of Justinian. Till the twelfth century the canon law consisted mainly of these canons collected, together with the capitularies of Charlemagne and the decrees of the popes, from Siricius, A. D. 398, to Athanasius IV., A. D. 1154. In A. D. 1114 Ivo, Bishop of Chartres, commenced to collect the decrees made by popes and the cardinals; Gratian, a Benedictine monk, methodized the collection, and published it in 1150. There followed the Decretals of Gregory IX., in A. D. 1234. [DECRETAL.] Next came the "Sext" of Boniface VIII., A. D. 1298 [SEXT], the Clementines or Constitutions of Clement V., A. D. 1308 [CLEMENTINE], and the Extravagants of John XXII., A. D. 1317. [EXTRAVAGANT.] These, with some more recent "Extravagants," constitute the "*Corpus Juris Canonici*" (The Body of Canon Law). Some lawyers graduated in canon and others in civil law, while not a few did so in both. As the fully-developed canon law greatly exalted the ecclesiastical over the civil power, it was never very cordially accepted by the English Parliament, and there was a national canon law composed of legatine and provincial constitutions.

(2) *Since the Reformation:* By 25 Hen. VIII., c. 19, repealed by 1 Phil. and Mary, c. 8, but re-enacted by 1 Eliz., c. 1, a revision of canon law was ordered, and only those parts of it were left binding which were not repugnant to the common or statute law. In the 27th year of Henry VIII., degrees in canon law were abolished, not however by Parliament, but by mandate. In 1603, under James I., certain ordinances analogous to canons were enacted by the clergy, but never received the sanction of Parliament. It has therefore been adjudged that where they introduce anything new they are not binding on the laity.

canon-lawyer, s. One skilled in or practicing canon-law.

canon-type, s. [CANON, II. v.]

căn-ôn-iz-â-tion, căn-ôn-iz-â-tion, s. [Fr. *canonisation*; Ital. *canonizzazione*; from Low Lat. *canonizo*=to canonize.]

1. The act of canonizing or enrolling any person in the canon or list of saints. In the Roman Catholic Church this is preceded by *beatification*. The practice of giving saintly honors to deceased Christians arose among the common people. In the 9th century some restraint was put upon it by the ecclesiastical councils. The first instance of the enrollment by the Roman bishop of a deceased person among the saints was that of Udalrich, Bishop

of Augsburg, by John XV., in A. D. 993. In the third Lateran Council, A. D. 1179, the right of conferring such honor was limited to the Pope.

"It is very suspicious, that the interests of particular families, or churches, have too great a sway in *canonizations*."—*Addison.*

"Even at the *canonization* of a saint, . . ."—*Mill: Liberty, ch. ii.*

2. The state of being canonized.

căn-ôn-ize, căn-ôn-ize, v. t. [Fr. *canoniser*; Sp. *canonizar*; Ital. *canonizzare*; Low Lat. *canonizo*=to enroll in a canon or list; *canon*=a list, register.]

cãn'-zõn'-a, cãn'-zõne, s. [Ital. *canzona*.]

1. A short song, in which the music is of much more importance than the words. It is one of the ancient forms of measured melody, and when the older writers employed it, it was usually made the vehicle for the display of skill and contrivance in the treatment of the phrases in fugal imitation. A secondary meaning of the word, *scoffing* or *banter*, perhaps accounts for the use of a *form* in which a musical imitation or *mocking* was shown.

2. In the early part of the last century the word was used to describe an instrumental composition, similar to the sonata as then known. (*Stainer & Barrett*.)

cãn'-zõn'-êť, s. [Ital. *canzonetta*, dimin. of *canzone*, *canzona* (q. v.).]

Music.: A short song, one brief compared with the sacred airs of the oratorio, or with the aria of the Italian opera.

Chem.: C₁₀H₁₆. An aromatic hydrocarbon, boiling at 171°, obtained by the destructive distillation of india-rubber.

caõut'-chõuc, s. [A South-American-Indian word.]

1. Bot.: India-rubber, so called because its primary use was, and is, the removal of pencil marks from paper. It is an elastic, gummy substance, consisting of the inspissated juice of various more or less milky species of plants. The greater part of the caoutchouc of commerce is the product of four euphorbiaceous trees, *Siphonia elastica*, from French Guiana, *S. braziliensis*, *lutea*, and *brevifolia*

from Brazil. It is furnished also by *Ficus elastica*, sometimes called by way of pre-eminence the India-rubber tree. It is derived also from some arto-carpads, specially *Castilloa elastica*, and some Apocynaceæ, notably *Urceola elastica*. It exists to a certain extent in most milky plants.

2. Comm., manuf., &c.: Caoutchouc was first exported to Europe early in the eighteenth century. Dr. Priestly pointed out that it might be used to rub out pencil marks, crumb of bread having been previously employed for that purpose. In 1791 Samuel Piat obtained a patent for making water-proof fabrics by a caoutchouc dissolved in spirits of turpentine. Hancock, in 1823, and Macintosh followed in the same direction. Mr. Chas. Goodyear invented the vulcanizing process, which by compounding with it a small amount of sulphur renders it as hard as horn, and well adapted for various purposes to the arts.

¶ *Mineral Caoutchouc*:

Min.: A name for Elaterite (q. v.).

caõut'-chõu'-cĩn, (a silent), s. [From Eng., &c., *caoutchouc*, and suff. -in (*Chem.*).]

Chem.: A volatile, oily liquid obtained by the destructive distillation of caoutchouc, which dissolves caoutchouc easily. It consists of two hydrocarbons, caoutchin, C₁₀H₁₆, boiling at 171°, and Isoprene, C₅H₈, boiling at 37°.

"Achil. Come, thou shalt bear a letter to him straight. Ther. Let me bear another to his horse; for that's the more *capable* creature."—*Shakesp.*: *Troil. & Cress.*, iii. 3.

"To say, that the more *capable*, or the better deserver, hath such right to govern, as he may compulsorily bring under the less worthy, is idle."—*Bacon*.

(2) (With the prep. *of*): Having intellectual power or capacity; able to comprehend; qualified or fitted for any act.

"But at what time a man may be said to have attained so far forth the use of reason, as sufficeth to make him *capable* of those Laws, whereby he is then bound to guide his actions."—*Hooker*: *Ecel. Pol.*, bk. i., ch. vi., § 5.

"He is as *capable* of writing an heroic poem as making a fervent prayer."—*Guardian*, No. 3.

*2. *Of inanimate things*: Intelligent, able to understand.

"Look you, how pale he glares;

His form and cause conjoin'd, preaching to stones,

Would make them *capable*."

Shakesp.: *Hamlet*, iii. 4.

3. (With the prep. *of*):

(1) Able or fitted to comprehend anything by the senses.

"Yet went she not, as not with such discourse

Delighted, or not *capable* her ear

Of what was high." Milton: *P. L.*, bk. viii.

* (2) Susceptible, subject to.

"The soul, immortal substance, to remain

Conscious of joy, and *capable* of pain."—*Prior*.

* (3) Ready or willing to receive or be subject to.

"What secret springs their eager passions move,

How *capable* of death for injured love!"

Dryden: *Virgil*; *Aeneid*, v. 9.

4. Legally qualified or competent; free from legal impediment or disqualification.

"Of my land,

Loyal and natural boy! I'll work the means

To make thee *capable*." Shakesp.: *Lear*, ii. 1.

†**căp'-a-ble-něss, s.** [Eng. *capable*; *-ness*.] The quality or state of being capable; capability, capacity.

"The efficacy of these does not depend upon the mere opus operatum; but upon the *capableness* of the subject."—*Killingbeck*: *Sermons*, p. 322.

†**că-păc'-i-fŷ, v. t.** [Lat. *capax* (genit. *capacis*) = that which can hold or contain, capable; *capio* = to seize, take, and *facio* (passive *fio*) = to make.] To render capable or fit, to qualify. (Used either with an infinitive following, or with the prep. *for*.)

" . . . thereby *capacifying* us to enjoy pleasantly and innocently all those good things the Divine goodness hath provided for, and consigned to us."—*Barrow* (ed. 1741), vol. i., Ser. 1.

2. *Anat.*: Very fine, or minute as hair; applied to the minute vessels by which the arteries and veins communicate with each other.

"Ten capillary arteries in some parts of the body, as in the brain, are not equal to one hair; and the smallest lymphatic vessels are an hundred times smaller than the smallest capillary artery."—*Arbuth: On Alim*.

3. *Surg.*: Applied to a linear fracture of the skull, unattended with any separation of the parts of the injured bones.

B. *As substantive*:

1. *Anat.*: One of the very fine minute vessels or tubes connecting the arteries and veins.

" . . . entering the minutest capillaries, and dislodging obstructions."—*Bishop Berkeley: Further Thoughts on Tar-Water*.

2. *Bot.*: The Maidenhair Fern, *Adiantum capillus-veneris*.

capillary attraction, s.

Nat. Phil.: The molecular attraction or repulsion, specially the former, which takes place when one end of a tube of slender bore is immersed in a fluid. In the case supposed the fluid ascends it to a considerable height. Capillary attraction aids the passage upward of sap in the vessels of plants. It may be gravity acting at minute distances.

capillary-filter, s. A simple mode of freeing water of its larger impurities by means of a cord of loose fiber, such as cotton candle-wick.

capillary-multifid, a.

Bot.: The same as CAPILLACEOUSLY-MULTIFID (q. v.).

capillary-pyrites, s.

Min.: The same as Millerite (q. v.).

capillary-repulsion, s.

Nat. Phil.: The cause which determines the descent of a fluid in a capillary tube, below the level of the surrounding fluid, when the tube is dipped in that fluid. It is the opposite to *capillary attraction*.

capillary system, s.

Anat.: The system or series of minute tubes described under *capillary vessels* (q. v.).

capillary vessels, s. pl.

Anat.: Vessels of hair-like minuteness, into which both the arteries and the veins divide, thus giving rise to the distinction of arterial and venous capillaries. The arteries which afford a channel to the blood immediately on its departure from the heart are large in breadth and capacity, but they divide again and again, as a tree does into branches, till they terminate in minute tubes of $\frac{1}{100}$ th to $\frac{1}{1000}$ th of an inch in diameter. Fitting most closely to the mouth of these are the venous capillaries, which unite into larger and larger veins, as stream-lets do to constitute a river. The action of the capillaries can be well seen under a powerful microscope in the partly transparent foot of a frog.

**cāp-il-lā'-tion, s.* [Lat. *capillatio*; from *capillus*=hair.] A hair-like filament or tube; a capillary-vessel.

ca-pil'-lī, s. pl. [CAPILLUS.] *Biol.*: The hairs on the front and top of an insect's head.

"Due by the law to capital punishment."

Milton: Sams. Agon., 1, 225.

"The abolition of capital punishment would not cause more murders."—*Times*, May 3, 1864. *Mr. Bright's Speech*.

4. *Printing* (*Capital letters*). [CAPITAL, s., A. 1.3.]

capital offense, s. Crime involving capital punishment.

capital punishment, s. The penalty of death.

căp'î-tăl, **cap-i-tale*, **cap-i-tel*, s. [O. Fr. *chapitel*, *capitel*; Sp. & Port. *capitel*; Lat. *capitellum*=a little head; dimin. of *caput*=a head.]

A. Ordinary Language:

I. Literally:

1. In the same sense as B. 1 (q. v.).

2. The head or chief city of any country or kingdom; the metropolis. [II. 2.]

"Pandæmonium, the high capital

Of Satan." *Milton: P. L.*, i. 756.

3. A letter of a larger size than, and of a different form from, those ordinarily used; a capital letter. [B. 6.]

*4. A heading or chapter of a book; a section. [CAPITULE.]

"Holy St. Bernard hath said in his 59th capital . . ."—*Scott*.

II. Figuratively:

1. Applied to the political views or opinions, which form, as it were, the capital on which a politician trades. Thus, the Republicans make political capital out of the errors of the Democrats, and vice versa.

2. The inhabitants of the chief city of any country.

"The general opinion, at least of the capital, seems to have been that Burnet was cruelly treated."—*Macaulay: Hist. Eng.*, ch. xix.

căp'î-tōl, **cap-i-toile*, s. [In Fr. *capitole*, from Lat. *capitolium*, from *caput*=a head; said to have been so called from a human head (*caput*) found when digging the foundations of the fortress of Rome, on the hill Tarpeius. Here a temple was built to Jupiter Capitolinus. The foundation was laid by Tarquinius Priscus, 616 B. C.; the building was continued by Servius Tullius; completed by Tarquinius Superbus, but not dedicated till 507 B. C., by the consul Horatius. It was destroyed by lightning 183; burnt during the civil wars, 83; rebuilt by Sylla, and dedicated again by Lutatius Catulus, 69; twice again burnt A. D. 69, 80; rebuilt 70, 82; sacked by Genseric, June, 455. The Roman consuls made large donations to this temple, and the Emperor Augustus bestowed on it 2,000 pounds weight of gold, of which metal the roof was composed: its thresholds were of brass, and its interior was decorated with shields of solid silver. The *Capitoline games*, instituted 387 B. C. to commemorate the deliverance from the Gauls, were revived by Domitian, A. D. 86. The Campidoglio in Rome contains palaces of the senators, erected on the site of the Capitol by Michael Angelo soon after 1546.]

THE NATIONAL CAPITOL.—The southeast corner-stone of the Capitol was laid September 18, 1793, "by Brother George Washington, assisted by the Worshipful Masters and Free Masons of the surrounding cities, the military, and a large number of people." The north wing was ready for occupancy in 1800, the south wing in 1808; but both were partially destroyed by the British in 1814. The foundation of the main building was laid in 1818 (March 24), the restoration of the wings having been commenced three years earlier; and the whole was completed in 1827. July 4, 1851, the corner-stone of the south extension was laid by President Fillmore, and this was finished in 1857. The north extension

că-pôn, ***ca-pun**, ***cha-poun**, *s.* [A. S. *capun*, from Lat. *capo*; Gr. *kapôn*=a capon; from a root *kap*=to cut; Fr. *chapon*; Sp. & Port. *capon*; Dan. *kapoen*; Ger. *kapaun*.]

I. Lit.: A cock chicken castrated for the purpose of improving his flesh for the table.

"Item, a capon, 2s. 2d."—*Shakesp.: Hen. IV., Pt. I., ii. 4.*

***II. Fig.**: A eunuch. (Applied to human beings in contempt.)

"Mome, malthouse, capon, coxcombe, idiot."

Shakesp.: Comedy of Errors, iii. 1.

capon's-feather, *s.*

Bot.: A book-name given to two plants—(1) Columbine (*Aquilegia vulgaris*); (2) Herb Benet, All-heal (*Valeriana officinalis*). (*Britten & Holland*.)

capon's-tail, ***capon's-taile**, *s.*

***1.** The plant Cetywall (*Valeriana pyrenaica*), (*Turner*.)

"Generally the Valerians are called by one name—in Latin, *Valeriana*; in English, *Valerian*, *Capons-tail*, and *Setwall*."—*Gerarde: Herball* (ed. 1633), p. 1078.

2. The herb Columbine.

Capon's-tail grass: A species of grass (*Festuca myurus*).

că-pôn, *v. t.* [CAPON, *s.*] To castrate, as a capon.

că-pôn-ŷt, *s.* [Eng. *capon*, and dimin. suffix *-et*.] A young capon.

că-pôn-i-ê-re, **că-pôn-nŷ-ê-re**, *s.* [Fr. *caponnière*; Sp. *caponera*; It. *capponiera*. Perhaps allied to Fr. *caponner*=to dissimulate in order to succeed. (*Mahn*.)]

Fortif.: A covered lodgment, of about four or five feet broad, encompassed with a little parapet of about two feet high, serving to support planks laden with earth. This lodgment contains fifteen or twenty soldiers, and is usually placed at the extremity of the counterscarp, having little embrasures made in them, through which they fire. (*Harris*.)

† Certain differences in construction give rise to the following names: *Covered*, or *casemated caponiere*; *open caponiere*; *single*, *simple*, or *half caponiere*; *palisade caponiere*. (*Knight*.)

că-pôn-ize, *v. t.* [Eng. *capon*, and suffix *-ize* (q. v.).] To castrate, as a capon.

"... an operator who *caponized* a young blackbird of about six weeks old."—*Barrington: On the Surgery of Birds*.

căp-or'-ŷi-an-ite, *s.* [From Monte Caporciano, in Tuscany, where it is found; suff. *-ite*.]

Min.: A variety of *Laumontite* (q. v.). It occurs in pearly monoclinic crystals of a flesh-red color; specific gravity, 2.47; hardness, 2.5-3.5; composition: silica, 53.0; alumina, 22.7; lime, 12.4; water, 11.9.

†ca-pôt, *s.* [Fr. *capot*, *être capot*=to be balked; *faire capot*=to capot; Ger. *caput*=ruined, broken; probably abbreviated from Lat. *caput mortuum*=a dead person or body.] When one player wins all the tricks of cards at the game of picquet he has effected a *capot*.

†ca-pôt, *v. t.* [CAPOT, *s.*] To effect a capot on one's antagonists in picquet.

"That last game I had with my sweet cousin, I *capotted* her."—*Lamb: Essays of Elia*; *Mr. Battle's Opin. on Whist*.

că-pô-te, *s.* [Fr. & Sp. *capote*; from Lat. *capa*=a cloak.]

2. *Mil.*: A coat with a hood, worn by soldiers, sailors, &c.

"The cloak of white, the thin *capote*,
That decks the wandering Candiot."
Byron: The Bride of Abydos, ii. 9.

**ca-pōūch*, **ca-poch*, s. [CAPOCH.]

"He [the youth, Dorothea] wore a little brown *capouch*, girt very near to his body with a white towel."—*Shelton: Don Quixote*, bk. iv., ch. 1.

căp-pa'-dīne, s. [Etymology doubtful.] A sort of silk flock or waste obtained from the cocoon after the silk has been reeled off, and used for shag in making rugs. (*Simmonds*.)

**Căp-pa-dō'-cī-ō*, **cap-er-doch-y*, s. [A corruption of *cappadocia*. (*Nares*.)] An old slang term for a prison.

"How, captain, idle? My old aunt's son, my dear kinsman in *Cappadocio*."—*Puritan*. (*Nares*.)

Cap-pagh, s. & a. [From *Cappagh*, near Cork, in Ireland.]

cappagh-brown, s. Manganese brown. There are two shades of it, light and dark *cappagh brown*. (*Ogilvie*.)

căp-pān'-ūs, s. [Etymology unknown.] A kind of worm, very hurtful to ship's bottoms, to which it adheres.

căp-pār'-ē-æ, s. pl. [Lat. *cappar(is)*, fem. pl. adj. suff. -*æ*.]

Bot.: A sub-order of the *Capparidaceæ*, comprising those species in which the fruit is a berry.

**căp-pār-īd*, s. [Lat. *capparis* (genit. *capparis*)]

Bot.: The English form of the name of the *Capparidaceæ*.

"*Capparids* are chiefly tropical plants."—*Balfour: Botany*, p. 402.

căp-pār-ī-dā'-cē-æ, s. pl. [Lat. *capparis* (genit. *capparis*), and fem. pl. suff. -*æ*.]

Bot.: A natural order of thalamifloral dicotyledons, placed by Lindley in his Cistal alliance. They are herbs, shrubs, or trees with alternate leaves and solitary or clustered flowers. The ovary is generally stalked, with parietal placentas and reniform seeds. They are akin to *Cruciferae*. The order is divided into two sub-orders—1. *Clomeæ*, with dry, dehiscent fruit; 2. *Cappareæ*, the fruit of which is a berry. The plants are principally tropical, and have pungent and stimulant qualities. The flower buds of *C. spinosa* constitute capers. [*CAPER* (4), s.] There are thirty-three known genera and 355 species.

căp-par-is, s. [Lat. from Gr. *kapparis*.] [*CAPER* (4), s.]

Bot.: A genus of plants, the typical one of the order *Capparidaceæ*. It consists of shrubs having simple leaves, frequently with two little spines at their base, and showy flowers with a four-parted calyx, four petals, and numerous stamens. The most generally known species is the *Capparis spinosa*, the Common Caper (q. v.), which grows on walls, &c., in the south of Europe and Mediterranean regions. Its mode of growth resembles a bramble. It is a stimulant, antiscorbutic, and aperient. So also are *C. rupestris*, a native of Greece; *C. Fontanesii*, from Barbary; and *C. ægyptiaca*, from Egypt. The bark of the root of *C. cynophallophora*, *amygdalina*, and *ferruginea* blisters like cantharides. (*Lindley, &c.*) *C. Sodada* is one of the characteristic features of the vegetation of Africa, from the desert to the Nile. The small berries, which have a pungent taste, form an important article of food, and the roots, when burnt, supply salt. It has a narcotic odor, and its acrid stimulating fruits are employed by women to produce fecundity.

**cappe*, s. [*CAP*.]

"A vernicle hadde he sowed on his *cappe*,
His walet lay byform him in his lappe."
Chaucer: The Prologue, l. 687-8.

căpped, **cap-pyd*, pa. par. & a. [*CAP*. v.]

"*Cappyd*, *sappatus*."—*Cathol. Anglicum*.

capped quartz, s.

Min.: A variety of Quartz. (*Brit. Mus. Catal.*)

capped rail, s.

Railroad Engineering: A railroad rail which has a steel cap attached to an iron body. It is generally made by so disposing the steel in a *fagot* as to form the edge of that metal, in rolling. It is otherwise known as a *steel-topped* or *steel-headed* rail. (*Knight*.) [*RAIL*.]

căp-pēl, s. [From Eng. *cap* (?).] The iron at the ends and middle of a horse-tree, whipple-tree, or cross-bar, used in plowing or harrowing, into which the hooks of the traces are placed. (*Halliwel*.)

căp-pēl-īne, s. [*CAPLEYNE*.] A small iron skull-cap worn by archers in the middle ages. (*Ogilvie*.)

**căp-pēr* (1), s. [*CAP* (2), s.] Apparently cup-bearer; a person in the list of the king's household servants. (*Pittscottie*, ed. 1763, p. 204, in ed. 1814, *Copperis*.) [*COPPER*.]

căp-pēr (2), **cap-par*, s. [Eng. *cap*, and suffix -*er*.] One who makes or sells caps.

"*Cappar*, *bonnettier*."—*Palsgrave*.

căp-pēr (3), s. [Apparently from *coppe*, the last portion of *A. S. attorcoppe*=a spider.] A spider. (*Scotch*.)

căp-pēr (4), s. A decoy bidder at an auction; a decoy gambler; a stool-pigeon.

căp-pēr-nōit'-y, *căp-pēr-nōit'-ed*, a. [*CAPER-NOITIE*.]

căp-pīe, s. [From Eng. & Scotch *cap*, and dimin. suff. -*ie*.]

1. A little cap.

2. A kind of beer between table-beer and ale, formerly drunk by the middle classes, which seems to have been thus denominated, because it was customary to hand it round in a little *cap* or quail. It is called also *cap-ale*. (*Scotch*.)

căp-pīl-ōw, v. t. [A softened form of Dan. *kapplober*=to run with emulation, to contest. (*Jamieson*.)] To distance another in reaping. In Roxburghshire, one who gets a considerable way before his companions on a ridge is said to *cappilow* them. In an old game the following phrase is used: "Kings, Queens, *Capilow*."

căp-pīng (1), pr. par., a. & s. [*CAP* (1), v.]

A. & B. *Aspr. par. & particip. adj.*: (See the verb.)

C. *As subst.*: The act of presenting with caps, in sign of a degree having been taken.

"The 'capping' of the medical students of Glasgow University took place on Tuesday."—*Weekly Scotsman*, Aug. 4, 1877.

capping-off, s.

Glass-making: The mode of detaching the closed end of a blown cylinder by drawing a circle around it, bringing it into the shape of an open-ended cylinder ready for splitting longitudinally. (*Knight*.)

capping-plane, s. [*CAP*, v.]

Joinery: A plane used for working the upper portion of staircase-rails.

căp-pīng (2), a. [A corruption of, or perhaps rather an early form of, *coping* (q. v.).]

capping-brick, s. A coping-brick.

că-prā, s. [Lat. *capra*=a she-goat; *caper* (genit. *capri*)=a he-goat.]

Zoöl.: A genus of ruminant mammals containing the true goats. There are horns in both sexes, and lachrymal sinuses are absent. There is a beard or long hair on the throat in both sexes, or in some species in the male only. *Capra hircus* is the domestic goat. It is thought to be a descendant of *C. ægagrus* of Persia and the Caucasus. *C. ibex* is the *ibex* of the Alps, and *C. pyrenaica* that of the Pyrenees. [*GOAT*.]

Palæont.: *Capra* has not been found earlier than the Post-Pliocene beds.

căp-rāte, s. [From Eng. *capr(ic)*; and suff. -*ate*.] [*CAPRIC ACID*.]

**căp-rēl*, s. [A dimin. of *caper* (q. v.).] A caper.

"Sik a mirthless musick their minstrels did make,
While ky cast caprels behind with their heels."
Polwart Flying: Watson's Coll., iii. 22.

că-prēl'-lā, s. [Latin dimin. of *caper*=a goat.]

Zoöl.: A genus of crustaceans, the typical one of the family *Caprellidæ* (q. v.). *Caprella Phasma* is the best known species. *Phasma* is a genus of *Mantidæ*, to which these crustaceans present a superficial resemblance, but no real affinity.

că-prēl'-lī-dæ, s. pl. [From Lat. *caprella*, and fem. pl. suff. -*idæ*.]

Zoöl.: A family of crustaceans, order *Læmodipoda*.

că-prē'-ō-lāte, a. [In Mod. Lat. *capreolatus*, from Class. Lat. *capreolus*=a tendril.]

Bot.: Winding and clasping with tendrils, cir-
rhus.

"Such plants as turn, wind, and creep along the ground, by means of their tendrils, as gourds, melons, and cucumbers, are termed, in botany, *capreolate* plants."
—*Harris*.

**că-prē-ōll*, v. i. [*CAPER*, v.] To caper, to skip like a roe. (*Sir Philip Sydney*.)

că-prē'-ō-lūs, *că-præ'-ō-lūs*, s. [Lat. *capreolus*=a kind of wild goat, *capreolus*, or roebuck.]

1. *Zoöl.*: A genus of mammals, family *Cervidæ*. *Capreolus caprea* is the Roebuck (q. v.).

2. *Palæont.*: There is in the Pliocene an extinct fossil species allied to the roebuck.

*3. *Bot.*: A tendril.

**căp-rēt*, s. [Ital. *capretto*; dimin. of *cappero*=a goat.] A young goat, a kid.

"As *capret* and hert thou shalt eete."

Wycliffe: Deut., xii. 15.

căp-rīc, a. [From Lat. *capra*=a she-goat; *caper*=a he-goat.]

capric-acid, s.

Chem.: $C_{10}H_{20}O_2 = C_9H_{19}O.CO.OH$. The same as *RUTIC ACID*. A monatomic, fatty acid which exists as a glyceride in butter and cocoa-nut oil, in fusel oil, and is formed by the oxidation of oleic acid, and of oil of rue. It is a colorless crystalline body, having a slight odor of the goat. It melts at 28°. It is insoluble in cold water, soluble in alcohol and ether. It forms crystalline salts called *caprates* or *rutates*, sparingly soluble in cold water.

că-prīc'-ī-ō (çc as tch), s. [Ital. *capriccio*.] [*CAPRICE*.]

1. *Ord. Lang.*: A caprice.

2. *Music*: A name which has been given at different times to different kinds of musical compositions. Now it is generally applied to a piece composed on original subjects, or to a brilliant transcription of one or more subjects by other composers.

"Will this *capriccio* hold in thee, art sure?"

Shakesp.: All's Well that Ends Well, ii. 3.

că-prīc'-ī-ō-sō (çc as tch), adv. [Ital. *capriccioso*=capricious, humorsome.]

Music: In a whimsical, humorous manner; after the style of a *capriccio*.

că-prī-çe, **că-prī-çh*, **că-prī-çh-ī-ō* (ch as sh), **că-prī-ç-ī-ō*, s. [Fr. *caprice*; Sp. and Port. *capricho*; Ital. *capriccio*=shaking in a fever; whim, fancy. Probably from *capo*=head, and *rezza*=an agree fit (*Wedgwood*, approved by *Skeat*), though most etymologists derive it from *caper*, m., *capra*, f.=a goat, in which case it would mean the frisk of a goat, a caper.] A whim adopted by a sudden change of opinion, and probably to be cast off in a little while for some new one; a freak, a fancy.

"Not that the Former of us all, in this,

Or aught He does, is governed by *caprice*."

Cooper: Truth, 346.

¶ For the difference between *caprice* and *humor* see HUMOR.

**cap-rich*, s. [*CAPRICE*.]

**căp-rī'-cī-ō*, **căp-rī'-chī-ō*, s. [Ital. *capriccio*.] A freak, fancy, caprice.

"To have viewed the soul stark naked, watched her loose in her frisks, her gambols, her *capriccios*."—*Sterne: Trist. Shandy*, ch. xxiii.

căp-rī'-cious, a. [Fr. *capricieux*; Ital. *capriccioso*, from *caprice* (q. v.).] Subject to, or full of caprice; whimsical, fanciful.

"The lower animals are, as we shall hereafter see, *capricious* in their affections, aversions, and sense of beauty."—*Darwin: Descent of Man*, vol. i. (1871), pt. i., ch. ii., p. 65.

¶ For the difference between *capricious* and *fanciful* see FANCIFUL.

căp-rī'-cious-lý, adv. [Eng. *capricious*; -*ly*.] In a capricious manner; in caprice; whimsically, fancifully.

"But on the same continent the species often range widely and almost *capriciously*."—*Darwin: Origin of Species* (ed. 1859), ch. xii., p. 384.

căp-rī'-cious-nēss, s. [Eng. *capricious*; -*ness*.] The quality of being capricious, or full of caprice.

"A subject ought to suppose that there are reasons, although he be not apprised of them; otherwise, he must tax his prince of *capriciousness*, inconstancy, or ill design."—*Swift*.

Că-pri-corn, *Căp-rī-cor'-nūs*, s. [Lat. *capri-cornus*; from *caper*=a goat, and *cornu*=a horn.]

Astronomy:

1. The tenth of the twelve signs of the zodiac, represented on globes in the form of a goat. It is the first of the winter and fourth of the summer signs.

2. The term is applied also to the part of the ecliptic between 270 and 300 E. long. The sun enters it about the 21st of December, at the winter solstice.

"Let the longest night in *Capricorn* be of fifteen hours, the day consequently must be of nine."—*Notes to Creech's Manilius*.

"And, what was ominous, that very morn

The sun was entered into *Capricorn*."

Dryden: Hind & Panther, iii. 598.

Tropic of Capricorn: [*TROPIC*.]

căp-rīd, a. [Lat. *caper*=a wild goat.] Of or pertaining to the goat tribe.

căp-rī-dæ, s. pl. [Lat. *caper* (genit. *capri*); fem. pl. suffix -*idæ*.]

Zoöl.: A family of ruminant mammals, of which the genus *Capra*, or goat, is the type.

†că-prīf'-ī-cāte, v. t. [Lat. *caprifico*; from *caprificus*=the wild fig; *caper*=a wild goat; *ficus*=fig.]

Bot.: To fertilize by the operation known as caprification.

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camēl, hēr, thēre; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trȳ, Sȳrian. æ, æ = ē; ey = ā. qu = kw

†cāp-rīf-i-cā-tion, s. [Lat. *caprificatio*; from *caprificus* = a wild fig; *caper* = a wild goat; *ficus* = a fig.] A process of fertilizing or accelerating the production of fruit, practiced in the Levant, particularly with the wild fig. It consists in suspending on the cultivated fig branches of the wild fig, which bring with them a small insect which penetrates the female flowers, carrying the pollen of the male flower on its body, or punctures the fruit in order to lay its eggs, which hastens the ripening, and may be the only effect. The Egyptians pretend to obtain the same result by puncturing the eye of the fruit with a needle dipped in oil.

"The process of caprification being unknown to these savages, the figs come to nothing."—Bruce: Travels, iii. 74.

ca-prīf-i-cūs, s. [Lat., from *caper* = a wild goat; *ficus* = a fig.]

Bot.: A plant—the Wild Fig—which, according to Theophrastus and Pliny, is a tree of a wild kind which never ripens its fruit, but has the power of conferring on other trees the virtue which it does not possess itself. [CAPRIFICATION.]

cāp-rī-fōle, ***cāp-rī-fō-lī-ūm**, s. [O. Fr. *caprifole*; Low Lat. *caprifolium*; from *caper* = a wild goat, and *folium* = a leaf.]

Bot.: The Woodbine, or Honeysuckle (*Lonicera Periclymenum*), a climbing shrub, the typical genus of the order Caprifoliaceae, noted for the very fragrant clusters of trumpet-shaped, cream-colored flowers. [HONEYSUCKLE, WOODBINE.]

"And Eglantine and Caprifole among,
Fashion'd above within their inmost part."
Spenser: F. Q., III. vi. 44

cāp-rī-fō-lī-ā'-cē-æ, s. pl. [Low Lat. *caprifoli* (um); fem. pl. suffix *-acē-æ*.]

Bot.: A natural order of plants, the Honeysuckle family. They are gamopetalous calycifloral dicotyledons, and are classed by Lindley in his Cinchonalliance. They are shrubs or trees, generally climbing, and are found in the northern parts of America, Europe, and Asia. The best known species is the Common Honeysuckle (*Lonicera Periclymenum*). The Elder, the Guelder Rose, the Laurustinus, and the Snowberry belong to this family, in which there are sixteen genera and 230 species known.

cāp-rī-form, a. [Lat. *caper* = a wild goat; *forma* = form, shape.] Goat-shaped, resembling a goat in shape or appearance.

ca-prīg'-ēn-oūs, a. [Lat. *caper* = a wild goat; *gigno* (pa. ten. *genui*) = to beget, produce.] Begotten by a goat.

cāp-rī-mūl'-gīd-æ, s. pl. [Lat. *caprimulgus*; fem. pl. suffix *-id-æ*.]

Ornith.: The Goatsuckers, or Night-jars, a family of birds akin to the Swallows (*Hirundinidae*) and the Swifts (*Cypselidae*), and constituting with them the typical section of the tribe Fissirostres. They have large eyes and soft plumage; the bill is short, depressed, and very broad, with an extremely wide gape. The ears are very large, the wings long and pointed, the legs short. The species are widely spread over the world. There are three sub-families, *Caprimulginae*, *Podagrinae*, and *Steatorninae* (q. v.). [CAPRIMULGUS.]

cāp-rī-mūl'-gī-næ, s. pl. [From Lat. *caprimulgus* (q. v.), and fem. pl. suff. *-inæ*.]

Ornith.: The typical sub-family of the family *Caprimulgidae* (q. v.). They have a very short and weak bill, and the middle claw pectinated; the precise use of the pectination is matter of dispute. For *Caprimulgus europæus* see *Caprimulgus*. *C.* or *Antrostomus vociferus* is the Whip-poor-Will of this country, and *C. carolinensis* the Chuck-Will's-widow, the names being imitated from their notes.

cāp-rī-mūl'-gūs, s. [Lat. *caper* = a wild goat; *mulgeo* = to milk.]

Ornith.: A genus of birds, the typical one of the family *Caprimulgidae*, and the sub-family *Caprimulginae*. One species, *Caprimulgus europæus*, is called the Goatsucker, from the old and erroneous belief that it sucks goats. Another name given to it is Night-jar, from a jarring noise, like that of a rapidly revolving spinning-wheel, made by the birds when sitting on trees; their note is a different one when flying about in search of droning-beetles and moths, on which they principally live, and which they catch on the wing. They hunt about by night, and the wheel-sound, which strikes up punctually at sunset, is one of the most notable of our ornithological phenomena on summer evenings. The bird is also called a Night-hawk, as resembling a hawk, or, still better, a gigantic hawk-moth, as it hovers on the wing. Other names given it are Bull-bat, Night-churn or Fern Owl.

cāp-rī-ne, a. [Lat. *caprinus* = pertaining to a goat; *caper* = a wild goat.] Of or pertaining to goats; goat-like.

"Their physiognomy is canine, vulpine, caprine."—Bishop Gauden: Life of Bishop Brownrigg, p. 236 (1660).

cāp-rī-ōle, s. [Fr. *capriole*.]

Horsemanship: A leap in the air without advancing, but in which the animal jerks out its hinder feet.

¶ A capriole is akin to a croupade and a ballotade, but in the former of these movements the horse does not show his shoes, which he does in a capriole, and in the latter of them he does not jerk out his hinder feet.

†cāp-rī-pēd, a. [Lat. *capra* = a goat; *pes* (genit. *pedis*) = a foot.] Having feet like a goat, goat-footed.

cāp-rō-āte, s. [From Eng. *capro*(ic), and suff. *-ate*.] [CAPROIC ACID.]

ca-prō-īc, a. [From Lat. *capra* = a she-goat, *caper* = a he-goat, with allusion to Gr. *kapros* = a boar, *spec.* a wild boar.]

caproic acid, s.

Chem.: $C_6H_{12}O_2 = C_5H_{11}.CO.OH$. A monatomic, fatty acid, which occurs as a glyceride in the butter of cow's milk, and in cocoa-nut oil; it is produced by the action of alkalis on amyl-cyanide, and as a sodium salt by the action of CO_2 on sodium amyl. It is a clear oil, specific gravity 0.931 at 15°, boils at 195°, solidifies at -9°. Its salts are called caproates; they are soluble and crystallizable. A strong solution of the potassium salts yields, by electrolysis, diamyl $C_{10}H_{22}$.

cāp-rō-mys, s. [From Gr. *kapros* = a boar, *spec.* the wild boar, and *mys* = a mouse.]

Zoöl.: A genus of rodent mammals, family *Psammoryctidae*, or Sand-rats. Some of the species, however, inhabit not sand but the branches of trees. They are found in South America and the West Indies. Some genera have spines mixed with ordinary hairs, and have in consequence been described as porcupines.

cā-prōs, s. [From Gr. *kapros* = a boar.]

Ichthy.: A genus of spiny-finned fishes, family *Scomberidae*. *Capros aper* is the Boar-fish, sometimes called *Zeus aper*. [BOAR-FISH.]

cā-pry-lāte, s. [From Eng. *capryl*(ic), and suff. *-ate* (Chem.) (q. v.).] [CAPRYLIC ACID.]

cā-pry-līc, a. [Lat. *capra* = a she-goat; Gr. *kapros* = a boar, and *hylē* = . . . matter as a principle of being.]

caprylic acid, s.

Chem.: $C_8H_{16}O_2 = C_7H_{15}.CO.OH$. A monatomic, fatty acid, which occurs as a glyceride in butter and in cocoa-nut oil, also in fusel oil. It is prepared by the saponification of cocoa-nut oil; its baryta salt is less soluble than that of caproic acid. Caprylic acid is an unpleasant liquid which solidifies at 12°. It boils at 233°. Its salts are called Caprylates.

cāp-sā, s. [Lat. = a case.]

Zoöl.: A genus of Mollusca, placed by Cuvier between *Venus* and *Petricola*, having two teeth on the one hinge, and a single but bifid one on the other; lunula wanting, shell convex, and the fold indicative of the retractor of the foot considerable.

cāp-sēl-lā, s. [Lat. *capsella* = a small box or coffer.]

Bot.: A genus of plants, order *Cruciferae*. *Capsella Bursa pastoris* is the Shepherd's Purse, so common at roadsides in this country.

cāp-shēaf, s. The top sheaf; the capping or highest part of any structure.

cāp-sī-čīne, s. [Lat. *capsic*(um), and suff. *-ine* (Chem.).]

Chem.: The active principle extracted from the capsules of cayenne pepper. It has a resinous appearance, and a hot, acrid taste, so pungent that if half a grain of it be volatilized in a large room, it will cause all who respire the contaminated air to sneeze and cough.

cāp-sī-cūm, s. [Lat. *capsa* = a case; so named from the seed-pods.]

I. Botany:

1. A genus of plants of the order *Solanaceae*, consisting of annual or biennial plants, bearing membranous pods containing several seeds, noted for their hot, pungent qualities. *Capsicum annuum*, a native of South America, furnishes the fruits known as chillies. These, as well as the fruits of *C. frutescens* and other species, are used to form cayenne pepper. For this purpose the ripe fruits are dried in the sun or in an oven, and then ground to powder, which is mixed with a large quantity of wheat flour. The mixed powder is then turned into cakes with leaven; these are baked till they become as hard as biscuit, and are then ground and sifted. Cayenne pepper is largely adulterated with red lead and other substances. [CAYENNE.] (*Treas. of Bot.*, &c.)

2. The fruit-pods of the plants described in 1.

II. Pharm.: *Capsici Fructus*, the dried ripe fruit of *Capsicum fastigiatum*, imported from Zanzibar. It is a small, oblong, scarlet, membranous pod, divided internally into two or three cells containing numerous flat white reniform seeds. It has no odor; its taste is hot and acrid. Capsicum fruits are used medicinally, in powder or as a tincture, externally, or as a gargle in cases of malignant sore throat, and internally as a stimulant in cases of impaired digestion.

cāp-sill, s. The upper horizontal beam in the timber-framing of bridges, viaducts, &c.

cāp-sī'ze, v. t. & i. [Etymology doubtful. *Mahn* suggests from *cap* = head, and *seize*, because it is properly to move a hoghead or other vessel forward by turning it alternately on the head. Skeat suggests that it is a nautical corruption of Sp. *cabeccar* = to nod one's head in sleep; from *cabeza* = the head; from Low Lat. *capitum* = a cowl, hood; Lat. *caput* = the head. Cf. Sp. *capuzar un bascal* = to sink a ship by the head.]

A. Transitive:

1. To upset or overturn any vessel. (Said especially of ships.)

"It is a pleasant voyage perhaps to float,
Like Pyrrho, on a sea of speculation;
But what if carrying sail *capsize* the boat?"
Byron: Don Juan, ix. 18.

2. To upset, overturn any thing or person.

B. Intrans.: To be upset or overturned.

cāp-sī'zed, pa. par. or a. [CAPSIZE.]

cāp-sī'z-īng, pr. par., a. & s. [CAPSIZE.]

A. & B. As pr. par. & participial adj.: (See the verb.)

C. As subst.: The act of overturning or upsetting; the state of being overturned or upset.

" . . . having reference to the loss of the *Ellen Southard* and the *capsizing* of the Liverpool Lifeboat, . . ."—*London Times*, November 6, 1875. (Adv.)

cāp-stān, s. [O. Fr. *cabestan*; Sp. *cabrestante*, *cabestrante* = a capstan; *cabestrar* = to tie with a halter; Lat. *capistro* = to halter, tie, pa. par. *capistrans*; *capistrum* = a halter; *capio* = to hold, seize.]

Naut.: A strong, massive apparatus of wood made to revolve, and shaped like a truncated cone, and having the upper part provided with holes for the reception of bars or levers with which to cause it to revolve, and thus raise a heavy weight by winding a rope round it. It is especially used on shipboard

Capstans.

for weighing the anchor. Capstans are single or double, according as they have one or two barrels upon the same spindle. The double capstan is revolved by two sets of men on two decks. They are known as "fore" or "aft" capstans, according to position. The fore capstan stands about midway between the fore and main masts; the aft capstan about the same distance abaft the main-mast. The drum capstan, for weighing heavy anchors, was invented by Sir Samuel Morland about 1661.

"The weighing of anchors by the capstan is also new."—*Raleigh: Essays*.

¶ 1. *To man the capstan*: To cause the men to stand in readiness at the capstan.

2. *To rig the capstan*: To fix the capstan-bars in their holes in the capstan.

3. *To paul the capstan*: To drop all the pauls into their sockets to prevent the capstan from recoiling during any pause of heaving. (*Smyth.*)

4. *To surge the capstan*: To slacken the rope which is wound round the barrel while heaving to prevent it from riding or fouling. (*Smyth.*)

capstan-bar, s. A long piece of wood, of the best ash or hickory, one end of which is thrust into one of the square holes of the drumhead of the capstan, like the spokes of a wheel. They are used to heave the capstan round, by the men setting their hands and chests against them and walking round.

capstan-bar pin, s. A little iron pin or bolt inserted through the ends of the capstan-bars to prevent their unshipping.

bōil, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, ðis; sin, aʃ; expect, Xenophon, exist. ph = f.
-cian, -tian = şan. -tion, -sion = şūn; -tion, -şion = zhūn. -tious, -cious, -sious = şūs. -ble, -dle, &c. = bel, del.

capstan-barrel, s.

Naut.: The main post of the capstan.

capstan-swifter, s.

Naut.: A rope passed horizontally through notches in the outer ends of the bars, and drawn very tight. The intent is to steady the men as they walk round when the ship rolls, and to give room for a greater number to assist, by manning the swifters both within and without. (*Smyth.*)

căp'-stōne, s. [Eng. *cap* (1), *s.*, and *stone*.]

*1. *Arch.*: A coping-stone or coping. [*COPESTONE*.]

*2. *Naut.*: A capstan.

*3. *Palæont.*: A fossil echinite of the genus *Conalulus*. It derives its name from a supposed resemblance to a cap.

căp'-sū-lar, *căp'-sū-lar-ŷ, a. [Fr. *capsulaire*; Low Lat. *capsularis*, from *capsula*=a little case; dimin. of *capsa*=a case, chest, or receptacle.]

Bot., &c.: Pertaining to or resembling a capsule; hollow like a capsule.

"It ascendeth not directly unto the throat, but ascending first into a *capsular* reception of the breast-bone, it ascendeth again into the neck."—*Browne: Vulgar Errors*.

capsular arteries, s. pl.

Anat.: The arteries of the renal gland, so called because they are inclosed in a bag or capsule.

capsular ligament, s.

Anat.: A membranous elastic bag or capsule enveloping the joints in the animal system.

căp'-sū-lâte, *căp'-sū-lâ-těd, a. [Eng. *capsul(e)*; -*ate*.] Inclosed or contained in a capsule, or anything resembling a capsule or case, as a walnut in its shell.

"Seeds, such as are corrupted and stale, will swim; and this agreeth unto the seeds of plants locked up and *capsuled* in their husks."—*Browne: Vulgar Errors*.

căp'-sulo (Eng.), căp'-sū-la (Lat.), s. [Lat. *capsula*=a little case or receptacle; dimin. of *capsa*=a case or receptacle; *capio*=to hold.]

1. Botany.

(1) Any dry dehiscent seed-vessel, internally consisting of one or more cells, splitting into several valves, and either discharging its contents through pores or orifices, or falling off entire with the seed. Capsules are distinguished by the number of their cells, as 1. Foxglove. 2. Thorn apple. 3. Iris. *unilocular*=single-celled, *bilocular*=two-celled, *triocular*=three-celled, &c.

*2. The heading or title of a chapter of a book; an introduction.

B. Law: The beginning or heading of a warrant, commission, or indictment, which sets forth when, where, and by what authority it was taken, found, or executed.

"The *caption* is no part of an indictment, it is merely the style of the court where the indictment was preferred."—*Wharton: Law Lexicon*.

căp'-tious, a. [Fr. *captieux*; Lat. *captiosus*=ready to seize or catch; *capto*=to seize, catch.]

1. Ensnaing, insidious, captivating, alluring.

"She taught him likewise how to avoid sundry *captious* and tempting questions which were like to be asked of him."—*Bacon*.

"Away with despair, no longer forbear

To fly from the *captious* coquette."

Byron: Hours of Idleness; Reply to some Verses.

2. Cavilling, fault-finding, censorious; peevish, perverse.

"A *captious* question, sir (and yours is one),

Deserves an answer similar, or none."

Cowper: Tirocinium, 903.

¶ Crabb thus discriminates between *captious*, *cross*, *peevish*, *fretful*, and *petulant*: *Captious* marks a readiness to be offended; *cross* indicates a readiness to offend; *peevish* expresses a strong degree of crossness; *fretful* a complaining impatience; *petulant* a quick or sudden impatience. *Captiousness* is the consequence of misplaced pride; *crossness* of ill-humor; *peevishness* and *fretfulness* of a painful irritability; *petulance* is the result either of a naturally hasty temper or of a sudden irritability. Adults are most prone to be *captious*; . . . spoiled children are most apt to be *peevish*; . . . sickly children are most liable to *fretfulness*; . . . the young and ignorant are most apt to be *petulant* when contradicted." (*Crabb: Eng. Synon.*)

bondage.

"At length he spyde whereas that wofull Squyre,
Whom he had reskewed from *captivaunce*."
Spenser: F. Q., III. vii. 45.

căp'-tîve, s. & a. [Fr. *captif*; Lat. *captivus* = a
captive; from *captus*, pa. par. of *capio* = to take.]
[CAITIFF.]

A. As substantive:

I. Literally:

1. One taken prisoner in war; one reduced to
bondage.

"You have the *captives*,
Who were the opposites of this day's strife."
Shakesp.: Lear, v. 3.

"Thou Timour! in his *captiv*'s cage—
What thoughts will there be thine."
Byron: Ode to Napoleon.

¶ With the preposition to before the captor or
person to whom the captive is subject.

"If thou say Antony lives, 'tis well,
Or friends with Cæsar, or not *captive* to him."
Shakesp.: Ant. & Cleop., ii. 5.

2. One confined; a prisoner, not necessarily taken
in war.

II. Fig.: Captivated, charmed, or ensnared by
excellence or beauty.

The master prophet grasps his full-ton'd lyre."
Goldsmith: An Oratorio, A. ii.

**căp'-tîve*, v. t. [CAPTIVE, s.]

1. Lit.: To make captive, to reduce to captivity.

"Thus when as Guyon Furor had *captivd*."
Spenser: F. Q., II. iv. 16.

2. Fig.: To captivate, charm, entrance.

"Beauty, which *captives* all things, sets me free."
Dryden: To the Lady Castlemaine.

**căp'-tîved*, pa. par. & a. [CAPTIVE, v.] Made
captive, brought into captivity.

¶ In the following example the accent is on the
second syllable, but this is only a rare poetical use.

"Betrayed, *captived*, and both my eyes put out."
Milton: Samson Agonistes, 33.

căp'-tîv-ēr, **căp'-tîv-ēr*, s. [Eng. *captiv(e)*;
er.] A captor, one who leads into captivity.
(*Scotch.*)

căp'-tîv'-î-tŷ, s. [Fr. *captivité*; Low Lat. *cap-
tīvitas*=captivity; *capio*=to take, to seize.]

I. Literally:

1. The state of being captive or in bondage or
servitude to enemies.

"... Lewis Sforza sold into *captivity* by his own
Switzers."—*Macaulay: Hist. Eng.*, ch. xxiii.

¶ In the Bible specially applied to the carrying
away of the Jews into servitude by Nebuchadnezzar.

"... and I asked them concerning the Jews that
had escaped, which were left of the *captivity*, . . ."
Nehem. i. 2.

2. The state of being a prisoner or in confinement.

"The gentle birde feels no *captivity*
Within her cage; but singes, and feeds her fill."
Spenser: Sonnets, lxxv.

II. Figuratively:

1. The state of being in subjection generally.

"For men to be tied, and led by authority, as it were
with a kind of *captivity* of judgment."—*Hooker*.

¶ With the preposition to before the person or
thing to which one is subject.

One who captures. (*Johnson.*)

**căp'-tur-a-ble*, a. [Eng. *captur(e)*; *able*.]
Possible to be captured; liable to capture.

"Instead of Breslau *capturable*, and a sure magazine
for us, . . ."
Carlyle: Fred. Great, bk. xx., ch. iii.

căp'-ture, s. [Fr. *capture*; Lat. *captura*; from
capio=to take.]

I. Ordinary Language:

1. The act of capturing or seizing.

"The great sagacity, and many artifices, used by birds
in the investigation and *capture* of their prey."—*Derham*.

2. The thing captured or seized; a prize.

"As a member of a good English house of business he
would be a valuable *capture*."—*Times*, Nov. 11, 1876.

II. International Law: The arrest or seizure of
a person or of ships by an enemy during war.
[MARQUE, PRIVATEERING.]

¶ Crabb thus distinguishes between *capture*,
seizure, and *prize*: "*Capture* and *seizure* differ in
the mode; a *capture* is made by force of arms, a
seizure by direct and personal violence. The *cap-
ture* of a town or an island requires an army; the
seizure of property is effected by the exertions of
one individual. . . . A *capture* may be made on
an unresisting object; a *seizure* supposes much
eagerness for possession on the one hand, and
reluctance to yield on the other. . . . A *capture*
is general, it respects the act of taking; a *prize* is
particular, it regards the object taken and its value
to the captor; many *captures* are made by sea
which never become *prizes*." (*Crabb: Eng. Synon.*)

căp'-ture, v. t. [In Fr. *captureur*; from *capture*,
s.] To seize, or make captive.

"... and how his sword
Tizona clear'd its way through turban'd hosts,
And *captured* Afric's kings."
Hemans: The Siege of Valencia.

căp'-tured, pa. par. & a. [CAPTURE, v.]

"The cat plays with the *captured* mouse, and the cor-
morant with the *captured* fish."—*Darwin: Descent of Man*
(1871), pt. ii., ch. xiii., vol. ii., p. 54.

căp'-tur-îng, pr. par., a. & s. [CAPTURE, v.]

A. & B. As pr. par. & particip. adj.: (See the
verb.)

C. As subst.: The act of making captive or seiz-
ing; capture.

**că-pû'-ccio* (cio as tschô), s. [Ital.] A capu-
chin or hood. [CAPOCH.]

"That at his back a broad *capuccio* had."
Spenser: F. Q., III. xii. 10.

că-pû'che, s. [CAPOCH.]

**că-pû'ched*, a. [Eng. *capoch*, *capuche*=a hood;
suff. -ed.] Covered as with a hood; hooded.

"They are differently cuculleted and *capuched* upon
the head and back."—*Broune: Vulgar Errors*.

căp'-u-çhîn, s. [Fr. *capucin*=a monk who wears
a cowl or hood; *capuce*, *capuchon*=a hood, a cowl.]

I. Ordinary Language:

1. A female garment, consisting of a cloak and
hood, made in imitation of the dress of capuchin
monks, whence its name is derived.

"The moment we were seated, my aunt pulled off my
uncle's shoes, and carefully wrapped his poor feet in her
capuchin."—*Smollett: Expedition of Humphry Clinker*.

2. One of the order of monks described in II.

II. Technically:

1. *Ch. Hist.*: A branch of the Franciscan order of
monks, so called from their peculiar *capuche* or
cowl—a pointed hood attached to the ordinary
Franciscan coat, and said to have been worn by
St. Francis himself. This branch was founded by
Matthew de Baschi, an Italian, but with him may
be named the famous Lewis de Fossembrun. The
Capuchins sought to restore the original rigor of
the institutes of St. Francis, which Pope Innocent
IV. had relaxed by granting the right to possess
property to the members of the Franciscan order.
In 1525 they received the solemn sanction of Pope
Clement VII. Because of their severe austerity, and
especially for the innovation of the *capuche*, they
were much persecuted by the other Franciscans.
Bernardo Ochino—their first Vicar-General—be-
came a Protestant, as, afterward, did also their
third. Eventually, however, they spread in great
numbers over Italy, Germany, France, and Spain.
In the seventeenth century they showed much zeal
in prosecuting missions to Africa. (*Mosheim: Ch.

cār'-at, *cār'-act, *s.* [Fr. *carat*; from Arab. *qirāt*=a carat, the twenty-fourth part of an ounce; from Gr. *keration*=the fruit of the locust-tree; Ital. *carato*; O. Port. *quirate*.]

I. Literally:

*1. The fruit of the Carob-tree, also called *carot*.

2. *Weights and Measures*:

(1) A weight of 3½ grains.

(2) The twenty-fourth part of an ounce. It is used by jewelers to express the fineness of gold, the whole mass being supposed to be divided into twenty-four parts and said to be so many carats fine, according to the number of twenty-fourth parts of pure gold contained in it. Twenty-four carat

means all gold, eighteen carat three-quarters gold. Fine gold consists of twenty-two carats of pure gold and two of alloy. The United States gold coinage is in these proportions. A double eagle weighs 516 grains, 46¼ grains of this being fine gold.

"A mark, being an ounce Troy, is divided into twenty-four equal parts, called *caracts*, and each *carat* into four grains: by this weight is distinguished the different fineness of their gold; for if to the finest of gold be put two *caracts* of alloy, both making, when cold, but an ounce, or twenty-four *caracts*, then this gold is said to betwenty-two *caracts* fine."—*Cocker*.

(3) A weight used by jewelers in weighing diamonds and other precious stones. It equals 3½ grains Troy.

II. *Fig.*: Fineness, purity.

"Thou best of gold, art worst of gold;

Other, less fine in *carat*, is more precious."

Shakesp.: Henry IV., Pt. II., iv. 4.

car'-a-tōe, *s.* [A native word.]

Bot.: A West Indian name for *Agave americana*.

cār'-a-vān', *s.* [Fr. *caravane*; Sp. & Ital. *caravana*; from Arab. *qairawān*; Pers. *kārwan*, *qirwān*=a caravan.]

I. Literally:

1. A number of travelers, pilgrims, or merchants traversing the deserts of Arabia, Africa, or other countries, in company for purposes of safety and convenience.

"When Joseph, and the Blessed Virgin Mother, had lost their most holy Son, they sought him in the retinues of their kindred, and the *caravans* of the Galilean pilgrims."—*Taylor*.

2. A large covered cart or wagon, such as those used by gipsies, and for the conveyance of beasts of a menagerie; also a similar vehicle employed for moving furniture. A train or number of such wagons.

*II. *Fig.*: A flight or number of birds flying together.

*3. A kind of sweetmeat containing caraway-seeds.

" . . . we are wont to eate *carawaies* or biskets, or some other kind of comfits or seedes together with apples, thereby to breake winde ingendred by them; and surely it is a very good way for students."—*Cogan: Haven of Health* (1595).

"Nay, you shall see mine orchard, where, in an arbor, we will eat a last year's pippin of my own grafting, with a dish of *caraways*, and so forth . . ."—*Shakesp.: Hen. IV., Pt. II., v. 3.*

B. As adjective: (See the compounds.)

caraway-comfit, *s.* A comfit or sweet containing caraway-seed.

caraway-fruit, *s.*

Pharm.: *Carui fructus*, the dried fruit of *Carum carui* or Caraway. These seeds (mericarps) are of a brown color, slightly curved, with fine filiform ridges containing a single vitta in each channel. They have a peculiar aromatic odor, and a warm taste. The oil is of a pale-yellow color. They are used in medicine as an aromatic, stomachic, and carminative, in cases of flatulence; the oil is added to purgative medicines to prevent griping.

caraway-seeds, *s. pl.* [CARAWAY, 2.]

cār'-a-wāyŷ, *s. pl.* [CARAWAY, 2.]

*car-ayn, *s.* [CARRION.]

carb, *prefix*.

Chem.: Having carbon in its composition. Many compounds occur with this prefix. Only the important substances are here given.

carb, car-a-bin, *s.* [CARP, v.] A rawboned, loquacious woman. (*Jamieson*.)

carb, car-ble, *v. i.* [Either a variant of Eng. *carp* (q. v.), or from Icel. *karp*=bragging; *karpa*=to brag, boast.] To cavil, to carp. (*Jamieson*.)

car-bal-lŷl'-āte, *s.* [Eng., &c., *carballyl(ic)*; -ate (*Chem.*) (q. v.).] [CARBALLYLIC ACID.]

car-bal-lŷl'-ic, *a.* [From Eng., &c., *carb(on)*; *allyl*; -ic.]

Chem.: A term used chiefly or exclusively in the compound which follows.

carballylic acid, *s.*

Inorganic Chem.: Tricarballic acid, $C_6H_8O_8 = (C_3H_5)(COOH)_3$. A triatomic, tribasic, fatty acid, formed by the action of nascent hydrogen on acetic acid, or by the action of alcoholic potash on propenyl tricyanide. It forms colorless trimetric crystals, soluble in water and alcohol. Its alkaline salts, called carballylates, are soluble in water. Its melting point is 158°.

car-bā-māte, *s.* [From Eng., &c. *carbam(ic)*; and -ate (*Chem.*) (q. v.).]

Chem.: $(CO)(NH_2)(ONH_4)$. Ammonium carbamate is formed by passing a mixture of perfectly dry carbon dioxide and ammonia gas into cold absolute alcohol, and heating the crystalline deposit with absolute alcohol in a sealed tube to 100°. The liquid, on cooling, deposits ammonium carbamate in crystalline laminae, which, when heated in a sealed tube to 140°, split into ammonium carbonate and urea. Ammonium carbamate is converted by water into acid ammonium carbonate. It can be distinguished by its precipitating calcium very slowly from a solution of $CaCl_2$ and ammonia.

car-bām'-ic, *a.* [From Eng., &c., *carb(on)*, and *amic* (q. v.).]

Chem.: A term used chiefly or exclusively in the compound which follows.

carbamic ethers, *s. pl.*

Chem.: Both acid and neutral ethers are known.

(1) *Acid Ethers*: The ethylammonium salt of ethylcarbamic acid. $(CO)(NH(C_2H_5)ONH_3(C_2H_5))$, a snow-white powder, is obtained by passing CO_2 into anhydrous ethylamine cooled by a freezing mixture.

(2) *Neutral Ethers* (called also *Urethanes*): Ethyl carbamate $(CO)(NH_2)OC_2H_5$. It is formed by the action of ammonia on alcohol saturated with carbonyl chloride, also by aqueous ammonia and ethyl carbonate. It forms colorless crystals soluble in water.

car'-bā-mide, *s.* [From Eng., &c., *carb(on)*, and *amide* (q. v.).] [UREA.]

Chem.: $CN_2H_4O = N_2(CO)H_4$. It is produced by the action of ammonia gas on carbonyl chloride, or upon ethyl carbonate, also by the decomposition of oxamide at red heat. Carbamide is decomposed by soluble hypobromites and hypochlorites with evolution of nitrogen, as $CN_2H_4O \times O_3 = CO_2 \times 2H_2O \times N_2$.

car'-bā-mine, *s.* [From Eng., &c., *carb(on)*, and *amine*.] [AMINE, s.]

Chem.: Isocyanide. These compounds are obtained by distilling a mixture of an alcoholic ammonia base and chloroform with alcoholic potash. They are oily, stinking liquids. The isocyanides of plemyl, ethyl, and amyl are known.

bōil, bōy; pōūt, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, †his; sin, aş; expect, Xenophon, exist. ph = f. -cian, -tian = şan. -tion, -sion = şün; -†ion, -şion = zhün. -tious, -cious. -sious = şüş. -ble, -dle, &c. = bel, del.

că-r-bă'-sě-a, s. [Lat. *carbasus*; Gr. *karbasos* = flax, linen, a sail.]

Zoöl.: A genus of infundibulate Polyzoa of the sub-order Cheilostomata, and family Flustridae. They are distinguished by the expanded, leafy, flexible, erect polypidoms; cells arranged in many rows, on one side only. What was formerly called *Flustra carbacea* is now named *Carbacea papyrea*. (Griffith & Henfrey.)

car-bă'-zō-tă-te, s. [From Eng., &c., *carb(on)*; *azot(ic)*; and suff. -ate.]

Chem.: A salt of carbazotic acid.

car-bă'-zōt'-ic, a. [From Eng., &c., *carb(on)*, and *azotic* (q. v.).]

Chem.: A term used chiefly or exclusively of the compound which follows.

carbazotic acid, s. [Carbon, *azote*=nitrogen.]

Chem.: Trinitrophenol, Nitrophenic acid, Picric acid, Gr. *pikros* = bitter, $C_6H_3N_3O_7 = C_6H_2(NO_2)_3(OH)$. Prepared from the impure nitrophenic acid. It is also obtained by the action of nitric acid and indigo, silk, wool, resin, &c. It crystallizes in yellow crystals, soluble in water, has a very bitter taste, and dyes silk and wool yellow, but does not dye cotton, hemp, and flax. Its salts are called *picrates*. Potassium picrate is very slightly soluble in water; when heated it explodes with great energy. Carbazotic acid is a nitro-substitution compound of phenol.

car'-bide, s. [From Eng., &c., *carb(on)*, and suff. -ide (Chem.) (q. v.).]

Chem.: A compound formed by the union of carbon with an element, as iron or hydrogen.

car'-bin, **cair-ban**, ***car-fin**, s. (Scotch.) [Gael. *cairbean*.] The basking-shark, *Squalus maximus*, L.

A. As substantive:

Military:

*1. A musketeer, a carbineer.

"When he was taken, all the rest they fled,
And our carbines pursued them to the death."

Kyd's Spanish Tragedy.

2. A short fire-arm, similar in bore and nature to, and carrying the same ammunition as, the infantry rifle.

1. Carbine. 2. Carbine-lock.

"... continued to fly on foot, throwing away carbines, swords, and even coats as incumbrances."—*Macaulay: Hist. Eng.*, ch. xii.

B. As adj.: (See the compounds.)

carbine-lock, s. The lock of a carbine.

"Sling on thy bugle—see that free from rust
My carbine-lock springs worthy of my trust."

Byron: The Corsair, i. 7.

carbine-thimble, s. A stiff leathern socket, secured to a D-ring on the off-side of the saddle by a strap and buckle. It receives the muzzle of the horseman's carbine.

car-bîn-ě'e'r, **că-r-ă-bîn-ě'e'r**, s. [Fr. *carabinier*.]

Mil.: Formerly applied to mounted infantry armed with a short carbine, and intended to fight on foot.

¶ Name still retained in England by the 6th Dragoon Guards.

car'-bin-ōl, s. [From Lat. *carbo* (genit. *carbonis*) (?), and Eng., &c. (*alcoh*)ol.]

Chem.: A name given to methyl alcohol, $C(OH)H_3$, by Kolbe, and the alcohols formed from it, by substitution of methyl, ethyl, &c., for an atom of hydrogen, are named according to the radicals which they contain, as Trimethyl carbinol, or Tertiary Quartyl alcohol, $C(OH)(CH_3)_3$.

car'-bin-yl, s. [From Eng., &c., *carbin(ol)*, and -yl, or *carb* (chem. pref.).]

Chem.: The name given to the alcohol radicals of the corresponding carbinols, as Dimethyl carbinol $C(CH_3)_2H.OH$ contains the radical Dimethyl-carbinyl ($C(CH_3)_2H$).

***car'-bō**, s. [Lat. = coal, from the jet black color of its wings.]

Ornith.: The Cormorant, an old genus of water-fowl, allied to the Pelicans, and belonging to the sub-family Pelicanine. [CORMORANT.] The Cormorant is now generally called *Phalacrocorax carbo*.

fâte, **fât**, **färe**, **amidst**, **whât**, **fâll**, **father**; **wē**, **wēt**, **hère**, **camel**, **hēr**, **thère**; **pīne**, **pīt**, **sīre**, **sīr**, **marine**; **gō**, **pōt**, **or**, **wōre**, **wōlf**, **wōrk**, **whô**, **sôn**; **müte**, **cüb**, **cüre**, **unite**, **cūr**, **rûle**, **fûll**; **trÿ** **Sÿrian**. æ, œ = ē; ey = ā. qu = kw.

car-bō-hÿ'-drâte, s. [Eng. *carbo(n)*; -hydrate.] Any one of a large group of compounds, containing six carbon atoms or some multiple of six, and hydrogen and oxygen in the proportion in which they form water: that is, twice as many hydrogen as oxygen atoms.

car-bō-hÿ'-droūs, a. [Eng. *carbohydr(ate)*; -ous.] Of the nature of carbohydrate.

car-bōl'-ic, a. [From Eng., &c. *carbo(n)*; (*alcoh*)ol; and Eng. suff. -ic.]

Chem.: A term used chiefly or exclusively in the compound which follows.

carbolic acid, s.

Chem.: $C_6H_5.OH$ = Phenyl Alcohol, Phenol, Phenic acid, Coal-tar Creasote. Phenol is a secondary monatomic aromatic alcohol, obtained by the dry distillation of salicylic acid. It is also formed by the dry distillation of coal, in the coal-tar oil. When pure it forms white deliquescent crystals melting at 35° to an oily liquid, which boils at 184° . It has a penetrating odor and burning taste; it is neutral; it coagulates albumen and has powerful antiseptic properties. It is used as a disinfectant, and to preserve meat, &c. It dissolves in alkalies, forming compounds called *phenates*. Potassium phenate crystallizes in white needles; when it is heated with iodides of ethyl, methyl, &c., double ethers are formed, as methyl-phenate, $C_6H_5OCH_3$. Chlorine, bromine iodine, and nitric acid form with it substitution compounds. [CHLOROPHENESIC ACID, CARBAZOTIC ACID.] Phenol is benzene with one molecule of (OH) substituted for one atom of H.

car'-bōn, s. [Fr. *carbone*; from Lat. *carbo* = a coal.]

Chem.: A tetrad non-metallic element, symbol C. Atomic weight, 12. Carbon occurs in three allotropic forms—two crystalline (diamond and graphite), and one amorphous (charcoal). Diamond crystallizes in forms belonging to the regular system. It is transparent, either colorless, or yellow, pink, blue, or green. The hardest substance known, refracts light strongly, is infusible, but is burned into CO_2 in oxygen gas at white heat. Specific gravity, 3.5. It is a non-conductor of electricity. It is found in gravel in India, Brazil, &c. [DIAMOND.] Graphite crystallizes in six-sided prisms. Specific gravity, 2.3. It is gray-black, with a metallic luster. It is a good conductor of electricity. Graphite often separates in scales from molten iron; it is used for lead pencils; it is often called black-lead. [GRAPHITE.] Amorphous carbon occurs more or less pure in lampblack, wood charcoal, coal, coke, and animal charcoal. Specific gravity, from 1.6 to 2. It is porous, absorbs gases, removes color from organic liquids, is used as a disinfectant, and burns in the air at red heat, forming CO_2 . When boiled with H_2SO_4 , it is oxidized to CO, and SO_2 is also formed, which escape in gas used as a reducing agent. Carbon forms two oxides with oxygen, CO and CO_2 , carbonic oxide and carbonic anhydride.

carbon-battery, s.

Elect.: [BUNSEN-BATTERY.]

carbon chlorides, s. pl.

Chem.: Carbon monochloride. This compound has been discovered to be hexa-chlor-benzene C_6Cl_6 by determination of its vapor density. It is obtained by passing the vapor of chloroform through a red-hot tube. It forms white silky needles, melting at 226° , and boiling at 331° .

Carbon-dichloride, $C_2Cl_4 = \begin{array}{c} Cl-C-Cl \\ | \quad | \\ Cl-C-Cl \end{array}$ analogous to ethene, obtained by passing the vapor of carbon-trichloride through a red-hot tube. It is a colorless liquid. Specific gravity, 1.6. It boils at 117° .

Carbon-trichloride, $C_2Cl_6 = \begin{array}{c} Cl-C-Cl \\ | \quad | \\ Cl-C-Cl \\ | \quad | \\ Cl-C-Cl \end{array}$ analogous to ethane, obtained by placing ethene chloride into a glass vessel containing Cl and exposing it to sunshine. A white crystalline aromatic substance melting at 160° , and boiling at 182° .

Carbon-tetrachloride, $CCl_4 = Cl-C-Cl$, a colorless liquid, specific gravity 1.56, and boiling at 77° ; obtained by passing the vapor of Cl and CS_2 through a red-hot tube, and distilling the liquid formed with potash. Also formed by the action of Cl on CH_4 in direct sunlight. By the action of sodium amalgam on its alcoholic solution the atoms of Cl are replaced by atoms of hydrogen.

carbon dioxide, s.
Chem.: Carbonic acid gas, Carbonic anhydride, Carbonic oxide (of some chemists) = CO_2 . Carbon dioxide is a colorless gas 1.524 times as heavy as

air, and 22 times as heavy as hydrogen. It is evolved in large quantities from fissures in active and extinct volcanic districts. It is given off in the process of fermentation, from decaying animal and vegetable matter and by animals during respiration, and it contaminates crowded rooms. It accumulates also in the bottom of pits and wells, and forms a great part of the afterdamp or choke-damp of coal mines. It is also contained in most waters from springs, and water charged with it has the power of dissolving carbonates of calcium, magnesium, and iron. It is always produced when carbonaceous matter is burned in excess of air or oxygen. It has an agreeable pungent odor, but it cannot be respired, as it produces insensibility and death. It extinguishes the flame of a lighted taper. At the pressure of 38.5 atmospheres at 0° it is converted into a colorless limpid liquid insoluble in water, but soluble in ether and alcohol; it solidifies, on exposure to the air, into a snow-white mass, which is a bad conductor of heat; when mixed with ether it is used as a freezing mixture. Carbon dioxide exists in the air, and is decomposed by the green leaves of plants, which retain the carbon and liberate oxygen in sunlight. About four volumes of CO_2 are contained in 10,000 volumes air. The total quantity is estimated at about three billions of tons. Cold water dissolves about its own volume of carbon dioxide, whatever be the density of the gas with which it is in contact, the solution reddens blue litmus paper, and converts oxides of the alkaline and alkaline earth metals into carbonates (q. v.). Carbon dioxide is contained in aerated waters and in sparkling wines. Carbon dioxide can be obtained by burning carbon in excess of oxygen; but by passing CO_2 over red-hot charcoal it is converted into carbon monoxide. Carbon dioxide is usually prepared by decomposing a carbonate with one of the stronger acids, as by the action of hydrochloric acid on marble, which gives calcium chloride, water, and CO_2 . Carbon dioxide can be distinguished by its giving a white precipitate when passed into a solution of lime or baryta water, by its quick absorption by caustic alkalies, and by its extinguishing the flame of a lighted taper. [CARBONATE.] Carbon dioxide is decomposed by heating potassium in it, forming an oxide and liberating carbon.

carbon disulphide, s. [BISULPHIDE OF CARBON.]

carbon-holders, s. pl.

Elect.: The fixed clamps for holding the ends of the carbons in electric arc lamps.

carbon-light, s.

Elect.: The light produced between and upon two carbon points, between which passes a current of electricity. [ELECTRIC LIGHT.]

carbon monoxide, s.

Chem.: Carbonous oxide, Carbonic oxide, Carbonyl = CO . Carbon monoxide is a colorless, inodorous, tasteless gas, insoluble in water, specific gravity 0.967. It burns with a light-blue flame, forming CO_2 . It is intensely poisonous, even when mixed with large quantities of air, producing faintness, insensibility, and death. It is formed when CO_2 is passed over red-hot charcoal, also by heating oxalic acid $C_2H_2O_4$ with sulphuric acid, which decomposes it into H_2O , CO_2 , and CO. The CO_2 is removed by passing the gas through limewater. It unites with KHO at high temperatures, forming formate of potassium. It unites with Cl when exposed to sunlight, forming phosgene gas $COCl_2$. Carbon monoxide can also be formed by heating powdered ferrocyanide of potassium with ten times its weight of concentrated sulphuric acid. Carbon monoxide (Carbonyl) in organic chemistry acts as a diatomic radical.

carbon oxychloride, s.

Chem.: Phosgene gas, Carbonyl chloride, $COCl_2$. Obtained by exposing dry CO and Cl_2 to direct sunlight, also by passing carbon monoxide into boiling antimony pentachloride, and by the oxidation of chloroform. It is collected over mercury. It condenses into a liquid at 0° . It is decomposed by water forming carbon dioxide and hydrochloric acid. Treated with dry ammonia gas NH_3 , it forms urea $CO(NH_2)_2$ and ammonium chloride.

carbon-printing, s.

Photog.: A photographic process introduced by Poitevin in 1855. It is as follows: Paper is coated with a compound of bichromate of potassa, gelatine, and lamp-black, in cold distilled water; this is allowed to dry in a dark room, subsequently exposed between a negative for a few minutes, according to the character of the solution and of the light, then dissolving off with hot water the parts not affected by the actinic action of the light. The picture resulting from this treatment is a positive print in black and white, of which the shades are produced by the carbon of the lamp-black. Poitevin also introduced various colors into the same process. Poitevin, later, introduced another process

for carbon-printing under a *positive*. The paper is floated in a bath of gelatine dissolved in lukewarm water and colored with lamp-black. Such paper is sensitized in a dark room by immersion in a solution of sesquichloride of iron and tartaric acid. This renders the gelatine insoluble, even in boiling water. The sheets are dried and exposed under transparent positives in the printing-frame. The parts of the film acted upon by light become soluble in hot water, the iron salts, under the influence of light, being reduced by the tartaric acid, restoring the organic matter to its natural solubility. The sheet is then washed in hot water, which removes the ferruginous compound and develops the picture. Improvements were subsequently introduced by Swann and others.

¶ *Argentotype* is a modified form of carbon picture introduced by Wenderoth, in which the print is backed by a polished plate, to bring up the high lights. Johnson proposed tin as a substitute, cheaper and less likely to tarnish. (*Knight*.)

carbon sulphochloride, s.

Chem.: CSCl_2 , a yellow, irritating liquid, decomposed by potash into K_2S , K_2CO_3 , and CCl_4 . It is not acted upon by water. It is obtained by the action of dry chlorine on carbon disulphide.

carbon tool-point, s. An application of the diamond to mechanical purposes. These points are used to point, edge, or face tools for drilling, reaming, sawing, planing, turning, shaping, carving, engraving, and dressing flint, grindstones, whetstones, emery, corundum, tanite, or tripoli wheels, iridium, nickel, enamel, crystals, glass, porcelain, china, steel, hardened or otherwise, chilled iron, copper, or other metals. Twenty-eight forms of it are figured in *Knight's Practical Dictionary of Mechanics*.

car-bō-nā'-gē-ōūs, a. [From Lat. *carbo* (genit. *carbonis*)=charcoal, and Eng. suffix *-aceous*, from Lat. suffix *-aceus*.]

Min. & Geol.: Consisting mainly of carbon, the simple element of charcoal.

¶ In geology the term is applied to strata wholly or in large part formed by the accumulation of such vegetable material as sunken forests, massed drift-wood, turf, and moss-bogs. Coal, lignite, and peat have hydrogen as well as carbon in their composition, and often mineral impurities. Anthracite and graphite (metamorphosed coal) consist of nearly pure carbon. Diamond is pure carbon. Bituminous shales, fossil pitch, petroleum, and naphtha are some other of the carbonaceous materials found in the earth. In exceptional cases the carbon of carbonaceous rocks may be of animal origin, thus the oily matter with which the bituminous shales of Caithness are impregnated seems to have been derived from the decomposition of fossil fishes rather than of plants.

"In India, the great heat of the climate brings into play that law already pointed out, by virtue of which the ordinary food is of an oxygenous rather than of a carbonaceous character."—*Buckle: History of Civilization in England*, p. 63.

***car-bō-nā'-de, *car-bō-nā'-dō, s.** [Fr. *carbonade*; from O. Fr. *carbon*; Lat. *carbo* (genit. *carbonis*)=charcoal.] A piece of fish, flesh, or fowl, cut in slices, seasoned, and broiled.

"If I come in his way willingly, let him make a carbonado of me."—*Shakesp.*: 1 *Henry IV.*, v. 3.

***car-bō-nā'-dēd, *car-bō-nā'-dōed, pa. par. or a.** [CARBONADE, v.]

***car-bō-nā'-dīng, *car-bō-nā'-dō-īng, pr. par. & s.** [CARBONADO, v.]

A. *As pr. par.*: (See the verb.)

B. *As subst.*: The act or process of slicing fish, &c., and broiling it over the coals.

car-bō-nā'-do, s. [CARBONADE.]

1. *Ord. Lang.*: The same as CARBONADE.

2. *Min.*: Large pebbles or masses of diamonds, occasionally 1,000 carats in weight. They consist of pure carbon, excepting 0.27-2.07 per cent. (*Dana*.) A variety of the diamond. (*Brit. Mus. Cat.*)

***car-bō-nā'-dō, v. t.** [CARBONADO, s.]

1. *Lit.*: To cut or slice fish, fowl, &c., and broil them on the coals.

"A hare dainty carbonadoed."—*Beaum. & Fletcher*.

2. *Fig.*: To hack, cut to pieces.

"Draw, you rogue, or I'll so carbonado Your shanks." *Shakesp.*: *King Lear*, ii. 2.

car-bō-na'-r-ism, s. [*Carbonar*(i); *-ism*.] The principles of the Carbonari.

car-bō-na'-ro (pl. *carbonari*), s. [Ital. *carbonaro*=a collier.] A member of a secret association established in Italy in the beginning of the present century, with the object of setting up a republic. The Carbonari took charcoal [Ital. *carbone*] as their symbol of purification, and adopted as their motto, "Revenge on the wolves who devour the lambs." The origin of the society is uncertain.

car-bōn-a-tā'-tion, s. [From Eng. *carbonate*.] The process of saturating with carbonic acid gas; as is done with purified beet juice in making beet sugar.

car-bōn-āte, s. [From Eng. *carbon*(ic), and suff. *-ate* (*Chem.*) (q. v.).]

Chem.: Carbonates are salts. The corresponding acid, H_2CO_3 , is not known in a free state; it may be formed when CO_2 is dissolved in water; it is dibasic; the carbonates of the alkaline metals are soluble in water, and are either acid or neutral salts according as one or both atoms of H are replaced, as KHCO_3 and K_2CO_3 . The acid salts are often called bicarbonates. The carbonates of the other metals are insoluble. Basic carbonates are mixtures of carbonates and oxides. Carbonates liberate CO_2 when treated with an acid, which may be recognized by passing it into a solution of baryta water, in which it throws down a white precipitate of BaCO_3 , soluble in HCl. Carbonic acid may be theoretically considered to have this formula and belong to the lactic acid series—

car-bōn-ā-tēd, a. [CARBONATE.]

Chem.: Combined or impregnated with carbonic acid. Carbonated water is either pure or holding various saline matters in solution, impregnated with carbonic acid gas. For general sale in this country the water contains a little soda, which being charged with the gas is called soda water. (*Ure: Dictionary of Arts, Manufactures and Mines*.)

car-bōn-īc, *car-bōn-īck, a. [Eng. *carbon*; *-ic*.] Containing carbon, pertaining to carbon.

"Corn, and particularly wheat, contains more of the carbonic principle than grasses."—*Kirwan: On Manures*, i., § 2.

carbonic acid, s.

1. *Chem. & Ord. Lang.*: The old but still well-known name for what is called by modern chemists *carbon dioxide* (q. v.).

2. *Physiol.*: Air exhaled from the lungs is saturated with moisture, and, moreover, contains about 4.35 per cent. of carbonic acid. The amount is increased by active exercise. By breathing the same air again and again, it is possible to increase the carbonic acid to about 10 per cent., but with very deleterious effects. Air in which animals had been suffocated was found by Mr. Courthope to contain 12.75 per cent. of carbonic acid, but less than half that amount (5 to 6 per cent.) will endanger life.

Carbonic acid engine:

1. An engine driven by the expansive power of condensed carbonic acid gas.

2. A machine for impregnating water with carbonic acid gas as a beverage.

3. A form of fire-engine, in which water is ejected by the pressure due to the evolution of carbonic acid in a closed chamber over water, or in which carbonic acid is ejected with the water, to assist in extinguishing the fire by the exclusion of oxygen from it.

carbonic oxide, s. The old name for *carbon monoxide* (q. v.).

car-bōn-īf-ēr-ōūs, a. [Lat. *carbo* (genit. *carbonis*)=coal; *fero*=to bear, produce, and Eng. suff. *-ous*.]

Geol.: A term applied to the extensive and thick series of strata with which seams of palaeozoic coal are more or less immediately associated. It is applied as well to that great system of formations which yield our main supply of coal as to some divisions of that system, such as the Carboniferous Limestone and the Carboniferous Slates. It is also applied to the fossils found in any stratum belonging to the system.

carboniferous system or formation, s.

Geol.: The Carboniferous succeeds the old Red Sandstone or some other member of the Devonian system, and passes upward into the Permian series. Its constituent groups vary much in the thicknesses of their sandstones, clays, limestones, and coals in different parts of the world, according to their conditions of deposition in conterminous seas, estuaries, and lagoons.

Carboniferous fossils comprise labyrinthodont and other amphibia; heterocercal fishes of many forms; numerous insects, myriapods, and arachnids; crustaceans (including the last of the trilobites and the eurypterids) of all orders except the highest decapods; mollusks of all the known orders; polychaeta; corals of the "rugose" kind; foraminifera; and some plants of the conifer and cycad groups, but far more of the fern, equisetum, and lycopod orders.

The Carboniferous Limestone consists of the corals, encrinites, shells, and foraminifera of a great sea, with muds, sands, and coal-beds on its margins, both at first (Tuedian), and afterward (Yoredale). These constitute the coal-measures of Russia, Styria, Italy, Corsica, the Boulonnais, &c., and the Lower Coal-measures of Scotland.

The Millstone Grit next formed, in shallow water, of widespread sheets of sand and shingle, has a few scattered fossil plants and shells, and thin seams of coal.

"Measures" is a mining term for *strata*, retained for the coal-measures, which consist of numerous successive groups of (1) clay, (2) coal, (3) shale, and (4) sandstone, each varying from a few inches to some feet in thickness. These originated as maritime flats with luxuriant jungles, subjected to inundations of fresh and brackish waters, with mud and sand, and sometimes of sea-water, leaving a limestone of sea-shells.

The thick forests of gigantic lycopods, equisetes, and ferns covered their floors with accumulated exuviae, and thick layers of each season's spore-lust. Storms tore down the clustered trunks, and covered them with the mud and sand of inundations.

[COAL.] The "underclay," or "seat-earth," under each coal-seam was the soil in which the trees (*Sigillaria*, *Lepidodendron*, and *Calamites*) grew, and is a pure clay used for firebricks, encaustic tiles, &c.

The "roof-shale" over the coal, forming a tough roof to the galleries in mining, was brought by floods, together with its water-logged fern-fronds and trunks and branches of the larger plants. This and other shales ("batt," &c.) contain some beds of Anthracosia and other aquatic mollusks, also a few land shells, numerous entomotheca, and some higher crustacea, a few arachnids, insects, and myriapods, with occasional amphibia, and abundant remains of heterocercal fishes. These fossils are often imbedded in ironstone, concreted in the shales.

Thick sand-drifts, of frequent occurrence, formed the sandstones ("post," &c.), containing scattered plant-remains. (*Prof. T. R. Jones, F. R. S.*)

car-bōn-ī-zā'-tion, car-bōn-ī-gā'-tion, s. [Eng. *carboniz*(e); *-ation*.] The act or process of carbonizing, or converting into carbon. (*Ure*.)

car-bōn-īze, car-bōn-īse, v. t. [Eng. *carbon*; *-ize*.] To convert into carbon by the action of fire or acids.

car-bōn-īzed, car-bōn-īsed, pa. par. or a. [CARBONIZE.]

car-bōn-īz-ēr, s. [Eng. *carbonize*; *-er*.] A tank or vessel containing benzole or other suitable liquid hydrocarbon, and through which air or gas is passed in order to carry off an inflammable vapor. [CARBURETOR.]

car-bōn-īz-īng, car-bōn-īš-īng, pr. par., a. & s. [CARBONIZE.]

A. & B. *As pr. par. & particip. adj.*: (See the verb.)

C. *As substan.*: The act or process of converting into carbon; carbonization.

carbonizing-furnace, s. An apparatus for carbonizing wood, disintegrating rocks, &c. It is composed of a furnace or fire-chamber, movable upon a stationary frame, both vertically and horizontally, and provided with a nozzle by which the flame is directed upon the object.

car-bōn-ōm'-ē-tēr, s. [Eng. *carbon*, o connective, and *meter*.] An instrument for detecting the presence of an excess of carbonic acid by its action on lime-water.

car-bōn-ōūs, a. [Eng. *carbon*; *-ous*.] The same as CARBONIC (q. v.).

car-bōn-ŷl, s. & a. [From Lat., &c., *carbon*=charcoal, and Gr. *hulē*= . . . matter as a principle of being.] A diatomic radical having the formula CO'' .

carbonyl chloride, s. [CARBON OXYCHLORIDE.]

car-bō-rūn'-dūm, s. The name given to a newly discovered substance, composition yet undetermined.

"Incidentally to an attempt to produce diamonds by artifice, an American chemist discovered a mineral hitherto unknown—the hardest substance in existence with one exception. It is called 'carborundum.' The inventor for making his gems obtained from a concern in Lockport, N. Y., the use of its aluminum-smelting apparatus. In reducing that metal electricity is employed, generating an enormously high temperature. As a chance experiment he put into the furnace a lump of clay together with a piece of graphite, which is pure carbon. The result was some small wine-colored crystals of rhomboidal shape. On examination it was found that they were harder than sapphire. Diamond is the hardest of natural minerals; sapphire comes next, and then ruby."—*Philadelphia Times*.

car-bō-trī'-a-mīne, s. [From Eng. *carbo*(n); Lat. prefix *tri*=three, and Eng. *amine*.] [AMINES.]

Chem.: Guanidine, CH_5N_3 or Civ $\begin{array}{c} \text{NH}_2 \\ \text{NH} \\ \text{NH}_2 \end{array}$. An organic base produced by the action of ammonia on chloropicrin, also by heating cyanamide, CH_2N_2 , in alcoholic solution with ammonium chloride. Also

by oxidizing guanine with HCl and KClO₃. Guanine forms colorless crystals, forming an alkaline solution with water, which absorbs CO₂. Guanine boiled with baryta water yields ammonia and urea. Methyl, phenyl, &c., guanidines are known. (See *Watts: Dict. of Chemistry*.)

car-bōv'-in-āte, *s.* [From Eng. *carbovin(ic)*, and suff. *-ate* (Chem.).] A salt of carbovinic acid.

car-bō-vin'-ic, *a.* [From Eng. *carbo(n)*, and *vinic* (q. v.).] A salt of carbovinic acid.

carbovinic acid, *s.* The same as ETHYL CARBONIC ACID (q. v.).

car'-bōy, *s.* [Probably from Gael. & Ir. *carb* = a basket. Cf. Lat. *corbis*.] A large globular glass vessel, protected with wicker-work, and used for containing sulphuric acid and other corrosive liquids.

"Boil the whole . . . set it . . . aside in a corked carboy before it be bottled. Stir it well, and set it aside in carboys."—*Ure: S. V. Liqueurs*.

car'-būn'-cle, ***car-bōn'-cle**, **char-bōn'-cle**, ***char-buc'-le**, ***car-boc'-le**, ***char-buk'-elle**, ***char-bok'-ull**, *s.* [Fr. *carbuncle*; Ital. *carbuncolo*; Sp. *carbunco*; Ger. *karbunchel*; all from Lat. *carbunculus* = a little coal, dimin. of *carbo* = a coal.]

1. *Min.*: A precious stone, a variety of garnet, of a deep-red color, found in the East Indies. When held up to the sun its deep tinge becomes exactly the color of a burning coal. In the Middle Ages it was popularly supposed to have the power of giving out light. It is cut in a form called concave cabochon.

"The stone noblest of alle
The which that men *carbuncle* calle."
Gower: C. A., i. 57.

"And they set in it four rows of stones: the first row was asardius, a topaz, and a carbuncle . . ."—*Exod. xxxix. 10.*

2. *Script.*: The carbuncle of *Exod. xxxix. 10*, Heb. *bareketh*, and that of *Ezek. xxxviii. 13*, Heb. *bar-kath*, is probably the emerald; that of *Is. liv. 12*, Heb. *ekdachh*, is an unidentified flashing gem.

3. *Med.*: A malignant boil or ulcer, forming a hard round tumor, and differing from an ordinary boil in having no core.

car-būn'-clēd, *s.* [CARBUNCLE.]

1. Set with carbuncles.

"An armor all of gold; it was a king's.—
—He has deserved it; were it *carbuncled*
Like holy Phoebus' car."
Shakesp.: Ant. & Cleop., iv. 8.

2. Affected or marked with carbuncles; suffering from a carbuncle.

car-būn'-cu-lar, *a.* [Eng. *carbuncle*; *-ar*.] Of or pertaining to a carbuncle; of the nature of a carbuncle. (*Johnson*.)

***car-būn'-cu-lāte**, *a.* [Lat. *carbunculatus*, *pa. par.* of *carbunculo* = (1) to suffer from carbuncles, (2) (of plants) = to be blasted.]

O. Bot.: Blasted by excessive heat or cold.

car-būn'-cu-lā-tion, *s.* [Lat. *carbunculation*; from *carbunculo* = (1) to suffer from carbuncles, (2) (of plants) = to be blasted.] The blasting of the young buds of trees or plants, either by excessive heat or excessive cold. (*Harris*.)

car'-bu-rēt, *s.* Same as CARBIDE.

car'-bu-rēt-ēr, **car'-bu-rēt-ōr**, *s.* [CARBURETOR.] In motor vehicles, a chamber for exchanging liquid fuels, such as gasoline, into gas or vapor, by a process of evaporation, and then mixing this gas or vapor with a proper percentage of air to render it suitable for use in operating the motor.

car-bu-rēt'-tēd, *a.* [Eng. *carbureted*; *-ed*.]

Chem.: Combined with carbon, or holding carbon in solution. The gas known among miners as *fire-damp* is pure carburetted hydrogen.

car-bu-rēt'-tōr, **car-bu-rēt'-ōr**, *s.* [Eng. *carburetor*; *-or*.]

Chem.: An apparatus for making carburets, through which coal gas, hydrogen, or air is passed through or over a liquid hydrocarbon, to increase or confer the illuminating power. They may be said to be of two kinds, though the purpose differs rather than the construction: (1) for enriching gas, (2) for carbureting air. The former of the two was the primary idea; the latter was suggested as the matter was developed.

car-bu-ri-zā-tion, *s.* [From Eng. *carbureted*; *-iz*; and *-ation*.]

Of iron: The act of combining it with carbon with the view of converting it into steel.

car'-bŷl, *a.* [From Eng. *carb(on)*, and Gr. *hylē* = . . . matter as a principle of being.]

carbysulphate, *s.* [ETHIONIC OXIDE.]

car-ca-jōu, *s.* [Fr.]

Zoöl.: The badger, *Meles labradorica*, a native of North America; also called the Wolverine (q. v.).

†car-ca-nēt' (Eng.), ***car-cant** (Scotch), *s.* [A diminutive of Fr. *carcan* = a chain or collar; Dut. *karkant*; Low Lat. *carcanum*; Ital. *carcarne*; (?) from Armor. *kerchen* = the bosom, *kelchen* = a collar, from *kelch* = a circle.]

1. A jeweled chain or collar.

"Round thy neck in subtle ring
Make a carcanet of rays."
Tennyson: Adeline, 5.

2. A pendant ornament of the head.

"Upon their forebrows they did beir
Targats and tablets of trim warks,
Pendants and carcants shining cleir."
Watson's Coll., ii. 10.

car'-cass, **car'-case**, ***car-cais**, ***car-cays**, ***car-keys**, ***car-kasse**, ***car-kas**, *s. & a.* [O. Fr. *carquasse* = "a carkasse or dead corps" (*Cotgrave*); Fr. *carcas*; Ital. *carcassa* = a bomb, a shell; *car-casso* = a quiver, hulk; Sp. *carcasa*; Low Lat. *tarcasius* = a quiver; Pers. *tarkash* = a quiver.]

A. As substantive:

I. Ordinary Language:

1. Literally:

†(1) A body.

"Lovely her face; was ne'er so fair a creature,
For earthly carcass had a heavenly feature."
Oldham: Poems.

¶ Now only used in contempt.

(2) A dead body, a corpse.

"Carkeys. Corpus, cadaver."—*Prompt. Parv.*

"Could I myself the bloody banquet join!

Reason the card, but passion is the gale."

Pope: *Essay on Man*, ii. 108.

(a) To speak by the card: To be very exact or careful in one's words; to speak from official or certain information.

"How absolute the knave is! we must speak by the card, or equivocation will undo us."—*Shakesp.*: *Hamlet*, v. 1.

(b) That was my best trump card: My best chance; the best thing for me to do.

(c) He had the cards in his own hands: He had the advantage, and could do as he liked.

II. Technically:

1. Games: One of a number of small oblong pieces of thin pasteboard marked with divers points and figures, and used in games of chance or skill.

"Soon as she spreads her hand, th' aerial guard Descend, and sit on each important card."

Pope: *Rape of the Lock*, iii. 32.

¶ Playing-cards were probably invented in the East. In Italy they originally bore the name of *Naibi*, and they are still, in Spain and Portugal, called *Naipes*, signifying, in the Eastern languages, divination. Cards were first painted by hand. The art of printing cards was discovered in Germany between 1350 and 1360. It has been stated that cards were in use in Spain in 1332. In 1387, John I., king of Castille, prohibited their use. In France card-playing was practiced in 1361, and at the end of the fourteenth century we find Charles VI. amusing himself with cards during his sickness. The figures on modern cards are of French origin, and are said to have been invented between 1430 and 1461.

2. Naut.: A circular sheet of paper on which the points of the compass are marked.

"The very ports they blow,
All the quarters that they know,
I th' shipman's card."

Shakesp.: *Macbeth*, i. 3.

car'-dī-nal, **car-den-alle*, **car-den-ale*, *a. & s.* [Fr. *cardinal*; Lat. *cardinalis*; from *cardo*=a hinge. A letter, professing to have been penned by Pope Anacletus I., in the first century, but in reality forged in the ninth, says: "Apostolica sedes cardo et caput omnium Ecclesiarum a Domino est constituta; et sicut cardine ostium regitur, sic hujus S. Sedis auctoritate omnes Ecclesie reguntur." "The Apostolic chair has been constituted by the Lord the hinge and head of all the Churches; and as a door is controlled by its hinge, so all Churches are governed by this Holy Chair." Pope Leo IX. points out the relation in which the word cardinal stood to the idea of a hinge: "Clerici summæ Sedis Cardinales dicuntur, cardini utique illi quo cætera moventur vicinum adhærentes." "The clerics of the supreme Chair are called Cardinals, as undoubtedly adhering more nearly to that hinge by which all things are moved." (Trench: *On the Study of Words*, 2d ed., pp. 76, 77.)]

A. As adj.: That on which a thing or matter revolves or depends; the most important, chief, principal.

" . . . holy men I thought ye,
Upon my soul, two reverend cardinal virtues;
But cardinal sins, and hollow hearts, I fear ye."
Shakesp.: *Henry VIII.*, iii. 1.

B. Assubstantive:

1. *Church Hist.*: The highest dignitary in the Roman Catholic Church under the Pope. They are seventy in number, in allusion to the seventy disciples sent out by Christ and have the right of electing the Pope. They include six cardinal bishops, fifty cardinal priests, and fourteen cardinal deacons, who constitute the sacred college, and are chosen by the Pope. The dress of a cardinal is a red cassock, a rochet, a short purple mantle, and a red hat. Before the reign of Nicolaus II., in the eleventh century, the Roman pontiffs were elected by the whole clergy of the city of Rome, and by the prominent laity—nay, even by the body of the citizens. This pontiff transferred the election primarily to the cardinals, the other parties signifying their assent, and, finally, Alexander III., in the Third Lateran Council (A. D. 1179), limited the election to the cardinals, two-thirds of whom must vote for the person elected. This is the method of election which still prevails.

"Cardenale. Cardinalis."—*Prompt. Parv.*

"Good father cardinal, cry thou, amen,"
Shakesp.: *King John*, iii. 1.

*2. *Ord. Lang.*: A red cloak worn by women, and so called from a supposed resemblance in form or color to a cardinal's cape.

"Where's your cardinal? Make haste!"—*Lloyd*.

Ornith.: A genus of birds, family Fringillidae, and sub-family Fringillinae (True Finches). *Carduelis elegans* is the Goldfinch. It is one of the handsomest of birds. [GOLDFINCH.] *C. canaria* is the Canary-bird [CANARY], and *C. spinus* the Aberdeen or Siskin (q. v.).

car-dūn-çēl'-lūs, s. [A dimin. from Lat. *carduus*.]

Bot.: A genus of the thistle group of Compositae. Nine species are known, all natives of the Mediterranean district. Some are stemless herbs, others grow to a height of from one to two feet.

car'-du-ūs, s. [Lat.]

Bot.: The Thistle, a genus of composite plants, comprising numerous species. About 100 species are known. *Carduus lanceolatus* (Spear Thistle), is the emblem of Scotland and the badge of the clan Stewart. *C. marianus* is the Holy Thistle.

carduus benedictus, s. [Lat. *benedictus*=blessed; *benedico*=to bless.]

Bot.: A plant, the Blessed Thistle (q. v.), so called from its supposed extreme efficacy in many diseases. The leaves were used in medicine as a stomachic and diaphoretic.

cāre, *kare, s. & a. [A. S. *cearu*, *caru*; O. S. & Goth. *kara*; O. H. Ger. *kara*; *chara*=sorrow, lamentation; M. H. Ger. *karn*=to lament.]

A. As substantive:

*1. Sorrow, grief.

"Profit of berthe is sorwe and care in luyngge."—*Trevisa*, ii. 215.

"Hir rewed of hir self ful sare
And hauid for hir sin slik kare."

Metrical Homilies, p. 15.

2. Solicitude, anxiety, concern.

"I can be calm and free from care
On any shore, since God is there."

Cowper: The Soul that Loves God.

3. Caution, heed (especially in the phrases, to have a care, to take care).

"My lady prays you to have a care of him."—*Shakesp.*; *Twelfth Night*, iii. 4.

"King Olaf, have a care!"—*Carlyle: Heroes and Hero-worship*, lect. 1.

4. Regard, charge, solicitude for, oversight.

"If we believe that there is a God, that takes care of us, . . ."—*Tillotson*.

" . . . we, and our affairs,
Are part of a Jehovah's cares."

Cowper: A Poetical Epistle to Lady Austen.

5. The object of one's regard or solicitude.

"Flushed were his cheeks, and glowing were his eyes;
Is she thy care? is she thy care? he cries."

Dryden: Virgil; Ecl. x. 33.

"Our fathers live (our first most tender care),
Thy good Menæcius breathes the vital air."

Pope: Homer's Iliad, xvi. 19.

6. It is vaguely used in the sense of inclination or desire.

¶ (1) Crabb thus distinguishes between *care*, *solicitude*, and *anxiety*: "These terms express mental pain in different degrees; *care* less than *solicitude*, and less than *anxiety*. *Care* consists of thought and feeling; *solicitude* and *anxiety* of feeling only. *Care* respects the past, present, and future; *solicitude* and *anxiety* regard the present and future. *Care* is directed toward the present and absent, near or at a distance; *solicitude* and *anxiety* are employed about that which is absent and at a certain distance. We are *careful* about the means; *solicitous* and *anxious* about the end; we are *solicitous* to obtain a good; we are *anxious* to avoid an evil. The *cares* of a parent exceed every other in their weight. He has an unceasing *solicitude* for the welfare of his children, and experiences many an *anxious* thought lest all his *care* should be lost upon them."

(2) He thus discriminates between *care*, *concern*, and *regard*: "*Care* and *concern* consist both of thought and feeling, but the latter has less of thought than feeling; *regard* consists of thought only. We *care* for a thing which is the object of our exertions; we *concern* ourselves about a thing when it engages our attention; we have *regard* for a thing on which we set some value and bestow some reflection. *Care* is altogether an active principle; the *careful* man leaves no means untried in the pursuit of his object; *care* actuates him to personal endeavors; it is opposed to negligence. *Concern* is not so active in its nature; the person who is *concerned* will be contented to see exertions made by others; it is opposed to indifference. *Regard* is only a sentiment of the mind; it may lead to action, but of itself extends no further than reflection. The business of life is the subject of *care*; religion is the grand object of *concern*; the esteem of others is an object of *regard*."

(3) In his view the following is the difference between *care*, *charge* and *management*: "*Care* will include both *charge* and *management*; but, in the strict sense, it comprehends personal labor; *charge* involves responsibility; *management* includes regulation and order. . . . *Care* is employed in menial occupations, *charge* in matters of trust and confidence; *management* in matters of business and experience. The servant has *care* of the cattle; an instructor has the *charge* of youth; a clerk has the *management* of a business." (Crabb: *Eng. Synon.*)

(4) For the distinction between *care* and *heed*, see *HEED*.

"By him that raised me to this *careful* height."
Shakesp.: Rich. III, i. 3.

2. *Of persons:*

*1. Full of care, trouble, or concern; anxious, solicitous.

"He cryed hym after with *careful* steuen."
Eur. Eng. Allit. Poems; Cleanness, 770.

"God kepe the prisoners out of sorwe, for *carful* thay were that day."
Sir Ferumbras, i. 115.

†(2) With *of, for, or to:* Anxious, studious, concerned.

"Behold, thou hast been *careful* for us with all this care; what is to be done for thee?"—2 *Kings* iv. 13.

"... we are not *careful* to answer thee in this matter."—*Dan.* iii. 16.

(3) Watchful, circumspect (with *of*).

"It concerns us to be *careful* of our conversations."—*Bay.*

(4) Provident, careful, exact, attentive, heedful.

"A *careful* student he had been
Among the woods and hills."

Wordsworth: Oak and the Broom.

¶ (1) Crabb thus discriminates between *careful*, *cautious*, and *provident*: "We are *careful* to avoid mistakes, *cautious* to avoid danger, *provident* to avoid straits and difficulties. *Care* is exercised in saving and retaining what we have; *caution* must be used in guarding against the evils that may be; *providence* must be employed in supplying the good or guarding against the contingent evils of the future. *Care* consists in the use of means, in the exercise of the faculties for the attainment of an end; a *careful* person omits nothing. *Caution* consists rather in abstaining from action; a *cautious* person will not act where he ought not. *Providence* respects the use of things; it is both *care* and *caution* in the management of property; a *provident* person acts for the future by abstaining for the present." (*Crabb: Eng. Synon.*)

(2) *Careful* and *attentive* are thus distinguished: "These epithets denote a fixedness of mind: we are *attentive* in order to understand and improve; we are *careful* to avoid mistakes. An *attentive* scholar profits by what is told him in learning his task; a *careful* scholar performs his exercises correctly. *Attentive* respects matters of judgment; *care* relates to mechanical action: we listen *attentively*; we read or write *carefully*."

cäre'-fül-lý, *care-ful-liche, *car-ful-li, adv. [Eng. *careful*; -ly.]

*1. In a manner exhibiting care or anxiety.

"For the inhabitant of Maroth waited *carefully* for good . . ."—*Mic.* i. 12.

"*Carfulli* to the kiug crieande sche saide."
Will. of Palerne, 4,347.

2. Attentively, heedfully, cautiously, with exactness and care.

"Sons, let it be your charge, as it is ours,
To tend the emperor's person *carefully*."
Shakesp.: Titus Andronicus, ii. 2.

"Some hundreds of athletic youths, *carefully* selected, were set apart, . . ."—*Macaulay: Hist. Eng.*, ch. xxiii.

cäre'-fül-nëss, *cäre'-fül-nësse, *cär'-fül-nësse, s. [Eng. *careful*; -ness.]

*1. Anxiety, solicitude, concern, vigilance.

"*Carefulnessse. Sollicitude.*"—*Palsgrave.*

"The death of Selymus was, with all *carefulness*, concealed by Ferhates."—*Knolles.*

2. Exactness, attention.

***car-eine, s.** [CARRION.]

cäre'-lëss, *cäre'-lësse, *cäre'-lës, a. [Eng. *care*; and -less.]

1. *Of persons:* Free from care or solicitude; unconcerned, heedless, thoughtless.

"If you return—ah why these long delays?"

Poor Sappho dies, while *careless* Phaon stays."
Pope: Sappho to Phaon, 248-9.

"Dryden . . . sighed for the golden days of the *careless* and good-natured Charles."—*Macaulay: Hist. Eng.*, ch. viii.

¶ With *of or about* before the object neglected or disregarded.

"He is held
In silly dotage on created things,
Careless of their Creator."

Cowper: Task, v. 587.

"A woman, the more curious she is about her face, is commonly the more *careless* about her house."—*Ben Jonson.*

2. *Of things:*

(1) Cheerful, undisturbed.

"In my cheerful morn of life,
When nurs'd by *careless* solitude I liv'd."
Thomson.

"To me myself, for some three *careless* moons,
The summer pilot of an empty heart."
Tennyson: The Gardiner's Daughter.

(2) Done or uttered thoughtlessly, or without care.

"The freedom of saying as many *careless* things as other people, without being so severely remarked upon."—*Pope.*

*3. Not according to art; rude.

"He framed the *careless* rhyme."—*Beattie.*

*4. Not cared for; neglected.

"Their many wounds and *carelesse* harmes."
Spenser: F. Q., IV. iv. 38.

¶ For the difference between *careless* and *indolent*, see *INDOLENT*. For that between *careless* and *negligent*, see *NEGLIGENT*.

careless-ordered, a. Laid out so as to look carelessly or negligently arranged.

"All round a *careless-ordered* garden."
Tennyson: To Maurice, 15.

cäre'-lëss-lý, adv. [Eng. *careless*; -ly.] In a careless manner, without care. (*Waller.*)

cäre'-lëss-nëss, *cäre'-lës-nës, s. [Eng. *careless*; -ness.] The quality of being careless, or without care; heedlessness, want of care, negligence.

"I who at sometimes spend, at others spare,
Divided between *carelessness* and care."
Pope: Satires, vi. 291.

"And o'er the spot the crowd may tread
In *carelessness* or mirth."
Byron: And Thou art Dead, as Young as Fair.

cäre'-lined', a. Marked by lines caused or deepened by care.

"The hollow, *carelined* cheek."—*J. Baillie.*

***cär'-en-çý, s.** [Lat. *caerentia*, neut. pl. of *carens*, pr. par. of *careo*=to be without, to want.] A want, lack.

"This sense of dereliction and *carency* of Divine favor for the time, it was the Father's pleasure to have it so."—*Bp. Richardson: On the Old Testament*, 1655, p. 185.

***car-ën'e, s.** [Low Lat. *carena*.] [QUARANTINE.] A fast of forty days on bread and water.

***cär'-ën-täne, s.** [QUARANTINE.] A papal indulgence, multiplying the remission of penance by forties.

"In the church of St. Vitus and Modestus, there are, for every day in the year, seven thousand years, and seven thousand *caerentanes* of pardon."—*Bp. Taylor: Dissuasive against Popery*.

ca-rëss', v. t. [CARESS, s. In Fr. *caresser*; Ital. *carezzare*.]

1. *Lit.*: To fondle, embrace, treat with kindness and affection.

2. *Fig.*: To court, flatter.

"They whom the world *caresses* most
Have no such privilege to boast."
Cowper: Olney Hymns, xxxviii.; *Looking Upward in a Storm*.

"All political parties esteemed and *caressed* him."—*Macaulay: Hist. Eng.*, ch. viii.

Crabb thus distinguishes between *caress* and *fondle*: "Both these terms mark a species of endearment. . . . We *caress* by words or actions; we *fondle* by actions only." (*Crabb: Eng. Synon.*)

ca-rëss', s. [Fr. *caresse*=a cheering, cherishing; *caresser*=to cherish, hug, make much of (*Cotgrave*); Ital. *carezza*; Low Lat. *caritia*=dearness, value; *carus*=dear, valuable. Cf. Ir. *cara*=a friend; *caraim*=to love.]

1. *Lit.*: An embrace, a fondling, an act of affection and endearment.

"He, she knew, would intermix
Grateful digressions, and solve high dispute
With conjugal *caresses*."

Milton: Par. Lost, viii. 56.

"The common people crowded to gaze on him wherever he moved, and almost stifled him with rough *caresses*."—*Macaulay: Hist. Eng.*, ch. xv.

2. *Fig.*: Flattery, courting.

"... he exerted himself to win by indulgence and *caresses* the hearts of all who were under his command."—*Macaulay: Hist. Eng.*, ch. xvii.

"... his *caressing* manners, his power of insinuation, . . ."—*Macaulay: Hist. Eng.*, ch. xx.

C. As subst.: The act of fondling or embracing; a caress.

ca-rëss'-ing-lý, adv. [Eng. *caressing*; -ly.] In a caressing or fond manner; fondly, lovingly.

"It was evidently a case of love at first sight, for she swam about the new-comer *caressingly*, . . ."—*Darwin: Descent of Man* (1871), pt. ii., ch. xiv., vol. ii., p. 115.

cär'-ët, s. [Lat. *caret*; 3d person sing. pres. indic. of *careo*=to be wanting, or lacking.] A mark [A] used to show that some words omitted in the line, and inserted in the margin or above the line, should be read in that place.

cär'-ëx, s. [Lat. *carex*, probably from *careo*=to want, to be without, from the fact that the upper spikes are without seeds.]

Bot.: A genus of plants, of the natural order Cyperaceæ (Sedges). There are numerous species found in cold, damp climates, the genus *Cyperus* taking the place of *Carex* in the tropics. Carices are in nutritious to cattle. *Carex arenaria* binds together the sand of the sea-shore. Its rootstock, with those of *C. disticha* and *C. hirta*, is used under the name of German sarsaparilla in skin diseases and in secondary syphilis, being reputed to be diaphoretic and diuretic. The Laplanders protect their hands and feet against frost-bites by placing the leaves of *C. sylvatica* in their gloves and shoes. The leaves of some species are used for tying the hops to the poles in English hop-grounds, and in Italy they are placed between the staves of wine casks, are woven over Florence flasks, and sometimes used for making chair bottoms.

cär'-ëy-a, s. [Named after Rev. Dr. W. Carey, of Serampore, an Indian botanist and missionary.]

Bot.: A genus of plants belonging to the order Barringtoniaceæ or Barringtoniads. The species are trees from India and Australia. They have large-stalked, serrate, and obovate leaves, large red or greenish-yellow flowers, in spikes or corymbs. *Careya arborea* has an eatable fruit, of which, however, the seeds are suspicious. Its bark is made into rough cordage or into slow-matches for firelocks. Its wood, which may be polished like mahogany, is made into boxes, &c. The bark of *C. sphærica*, a Malay species, is also used for cordage.

***carf, *carfe, v. i.** [CARVE, v.]

"Carf him of fet and honde."—*Robert of Gloucester*, p. 560.

cār'-ī-bōo, cār'-ī-bōu, s. [Canadian Fr. *cari-bou*.]

Zoöl.: An animal, the *Cervus silvestris*, or American Woodland Reindeer, the Attehk of the Cree, and Tantseeah of the Copper Indians. It is employed by the Laplanders to draw their sledges.

"The caribou deer of America, who have to contend still more with deep snow than the reindeer of the old continent, have their horns broader and better adapted to the purpose; besides, both varieties, in addition to these natural shovels, have broad feet, not only to sustain them better on the snow, but also to clear it away."—Swainson: *Natural History of Quadrupeds*, § 292.

cār'-ī-çā, s. [From Caria, a district of Asia Minor, whence it was supposed to have come.]

Bot.: A genus of plants, the typical one of the order of Papayads (Papayaceæ). It contains about ten species, all natives of tropical America. They are small trees without branches, and with large, variously-lobed leaves, resembling those of some kinds of palm. They exude an acrid, milky juice when wounded. The most remarkable species is the *Carica Papaya*, the Papaw-tree, a small tree, seldom above twenty feet high, with a stem about a foot in diameter, tapering gradually to the top, where it is about four or five inches. The fruit is of a dingy orange-yellow color, oblong, about ten inches long by three or four broad. The juice of this tree is believed in the West Indies to have the remarkable property of rendering the toughest meat tender, and even the flesh of pigs or poultry fed on the fruit or leaves is certain to be tender. The ripe fruit is made into sauce or preserved in sugar, and the juice of the unripe fruit is used to remove freckles. The leaves are employed as a substitute for soap. *C. digitata*, a tree which grows in Brazil, where it is called *chamburu*, is regarded almost with superstitious awe as a deadly poison.

cār'-ī-çā-türe, *cār'-ī-çā-tür'-ā, s. [Ital. *caricatura*=a satirical picture, one overloaded with exaggeration; from *caricare*=to load; Low Lat. *carrico*=to load; *carrus*=a car.]

1. A drawing or picture of a person in which certain points are so exaggerated as to give a ludicrous effect to the whole.

"From all these hands we have such draughts of mankind as are represented in those burlesque pictures which the Italians call *caricaturas*; where the art consists in preserving, amidst distorted proportions and aggravated features, some distinguishing likeness of the person, but

in such a manner as to transform the most agreeable beauty into the most odious monster."—*Spectator*, No. 537.

"... a hideous caricature of the most graceful and majestic of princes, was dragged about Westminster in a chariot."—Macaulay: *Hist. Eng.*, ch. xvi.

*2. A parody of a book.

***carn-ēy**, s. [Lat. *carneus*, from *caro* (genit. *carnis*)=flesh.]

Farriery: A disease in horses, in which the mouth is so furred that they cannot eat.

car-nif-i-cā-tion, s. [Fr. *carnification*; Lat. *carnificatio*, from *carnifico*=to make or form into flesh; *caro* (genit. *carnis*)=flesh; *facio*=to make.]

*1. **Ord. Lang.**: A turning into or forming flesh.

*2. **Med.** (*Carnification of the lung*): The term used in medical science to describe a solid or fleshy condition of the lung, due to the absence of air. The lung of a still-born child is said to be in a state of *carnification* (in this instance called *fætal*), because it has not yet breathed. The test of whether or not the child has ever drawn breath is to throw the lung into water. If it floats, the child was born alive. In criminal investigations important issues very often hinge upon this point. In fatal cases of whooping-cough the lungs have frequently been found collapsed or *carnified*, owing to death having immediately supervened upon a violent expiratory paroxysm.

car-nī-fied, *pa. par.* or *a.* [CARNIFY.]

car-nī-fy, *v. t. & i.* [Lat. *carnifico*=to become flesh; from *caro* (genit. *carnis*)=flesh, and *facio* (pass. *fio*)=to make.]

car-niv-ōr-a, s. [Lat. *carnivora*, neut. pl. of *carnivorus*=flesh-devouring; *caro* (genit. *carnis*)=flesh; *voro*=to devour.]

Zoöl.: A principal division of the Carnassiers or flesh-eating Mammalia. [CARNIVOROUS.] The name is given to those animals, including the feline, canine, and ursine families, which have their teeth peculiarly fitted for the mastication of animal matter. The incisors, except in some seals, are generally 3-3, the canines generally 1-1. They are, moreover, larger and longer than the incisors. The clavicles are rudimentary, or wanting. They are divided into two great groups, or sub-orders, one terrestrial the other aquatic. The first is the group of the *Fissipedia*, or "split-feet," so called from the fact that their feet are divided into well-marked toes; the second is the group of *Pinnipedia*, or "fin-feet" (seals, &c.), so called because the toes are bound together by skin-forming fins or flappers rather than feet. Another classification is into three sections or tribes—(1) *Pinnigrada*, or *Pinnipedia*, examples, the Seals and Walruscs. (2) *Plantigrada*, example, the Bear, and (3) *Digitigrada*, examples, the Cat and the Dog.

cār-ōl (1), ***car-olle**, ***car-al**, ***kar-olle**, ***car-ole**, ***car-owl** (Eng.), ***car-rale** (Scotch), s. [O. Fr. *carole*, *carolle*; from Bret. *koroll*=a dance; *korolla*=to dance; Manx *carval*; Corn. *carol*; Wel. *carol*=a carol, a song; *caroli*=to carol; Gael. *car-ull*, *caireall*=harmony, melody. Cf. Ir. *cor*=music; Wel. *cor*=a choir, a circle; Gael. *car*, *cuir*=a movement; Sansc. *char*=to move. (*Skeat*.)]

I. **Literally**:

*1. A circle.

*2. A round dance.

"Many *carollis* and great daunsyng."—*Sir Cleges*, 103.

*3. A song sung as an accompaniment to dancing.

"Alle the dameselles to synge *carolles* and to go ageins hem syngeinge oute of the town."—*Merlin* I. ii. 132.

4. A song of praise sung at Christmas-tide. It originally meant a song accompanied with dancing, in which sense it is frequently used by the old poets. It appears to have been danced by many performers, by taking hands, forming a ring, and singing as they went round. Bishop Taylor says that the oldest carol was that sung by the heavenly host when the birth of the Savior was announced to the Shepherds on the plains of Bethlehem. It is probable that the practice of singing carols at Christmas-tide arose in imitation of this, as the majority of the carols declared the good tidings of great joy; and the title of Noels, nowells, or novelles, applied to carols, would seem to bear out this idea. Carol singing is of great antiquity among Christian communities, as the carol by Aurelius Prudentius, of the fourth century, will show. (*Stainer & Barrett*.)

"Singers of *carrales* . . ."—*Acts James VI.*, 1581, c. 104.

"No night is now with hymn or *carol* blest."

Shakesp.: Midsummer Night's Dream, ii. 2.

car'-pënt-rý, *car-pen-tar-ye, *car-pent-rie, s. [Eng. *carpenter*; -y.]

1. The trade or art of a carpenter.

"It had been more proper for me to have introduced carpentry before joinery, . . ."—*Mozon: Mechanical Exercises*.

"Werkis of carpentarye, of browdrye, and of werkyng with nedlis."—*Wycliffe: Exodus*, xxxv. 33.

(2) An assemblage of pieces of timber connected by framing or letting them into each other, as are the pieces of a roof, floor, center, &c. It is distinguished from joinery by being put together without the use of any other edge tools than the ax, adze, saw, and chisel, whereas joinery requires the use of the plane. The leading points that require attention in sound carpentry are (1) the quality of the timber used; (2) the disposition of the pieces of timber, so that each may be in such direction with reference to the fibers of the wood, as to be capable of performing its work properly; (3) the forms and dimensions of the pieces; (4) the manner of framing the pieces into each other, or otherwise uniting them by means of iron or other metal. (*Gwilt*.)

"Thei' maken the werkis of carpentarye, . . ."—*Wycliffe: Exodus*, xxxv. 33.

SYN.—Carpenter, joiner.—The carpenter frames and puts together roofs, partitions, floors, and other essential parts of the building. The joiner only commences where the carpenter leaves off, by supplying and fitting stairs, cupboards, furniture, and other parts necessary, but not essential, to the building."—*Tomlinson*.

car'-pët, *car-pette, *car-pente, *car-pyte, s. & a. [O. Fr. *carpite*=a carpet; Ital. *carpita*; Dut. *karpit*, from Low Lat. *carpita*, from *carpo*=to card wool.]

A. As substantive:

1. *Ordinary Language:*

1. *Lit.*: A woolen fabric manufactured in patterns of various colors. *Used*—
(a) For a floor-covering.

"Be the Jacks fair within, the Jills fair without, carpets laid, and everything in order?"—*Shakesp.: Taming of the Shrew*, iv. 1.

(b) For a table-cover.

"Private men's halls were hung with altar-cloths; their tables and beds covered with copes, instead of carpets and coverlets."—*Fuller: The Church History of Britain*, p. vii., § 2, 1. (*Trench: Select Glossary*, p. 29.)

¶ The use of rugs is of great antiquity in Egypt, India, China, and Babylon. In the East at present Persia, Asiatic Turkey, and India are great seats of carpet manufacture. Carpets were introduced into England during the Crusades, but long afterward, indeed even to the time of Queen Elizabeth, the floors of palaces, not to speak of inferior habitations, were strewn with rushes. The practice of hanging the walls of palatial edifices with tapestry and cloth is older than that of carpeting the floors; thus in Hampton Court, built by Cardinal Wolsey, the floors are bare, while the walls are covered with tapestry. The manufacture of carpets was introduced into France from Persia about A D 1606, and workmen from France brought the art to England about 1750. Carpets are manufactured very extensively in the Eastern States. The largest industry of that kind in the world is at Philadelphia.

2. *Figuratively*—

(1) Anything used for or serving as a carpet.

"It was in vain that Schomberg tried to teach them to improve their habitations, and to cover the wet earth with a thick carpet of fern."—*Macaulay: Hist. Eng.*, ch. xiv.

(2) Applied to the sward, beds of flowers, or other natural covering of the earth.

"The whole dry land is, for the most part, covered over with a lovely carpet of green grass and other herbs."—*Ray*.

II. Entom.: An abbreviation for CARPET-MOTH (q. v.).

cār'-riage, *cār'-iage, *car-riadge, *car-yage, s. & a. [O. Fr. *cariage*; Low Lat. *carriagium*.] [CAR, CARRY.]

A. As substantive:

I. Ordinary Language:

1. Literally:

(1) The act of carrying, transporting, or conveying anything.

"The unequal agitation of the winds, though material to the carriage of sounds farther or less way, yet do not confound the articulation."—*Bacon: Nat. Hist.*

(2) That which is carried, such as baggage, furniture, accoutrements.

"And David left his carriage in the hand of the keeper of the carriage, and ran into the army."—*1 Samuel, xvii. 22.*

"... he spared the charge of the carriages, and the exactions of the country likewise."—*Spenser: Present State of Ireland.*

(3) That in which anything is carried, a vehicle.

"What horse or carriage can take up or bear away all the loppings of a branchy tree at once?"—*Watts.*

"... all the carriages of the monde, that brought vitale."—*Merlin, I. ii. 144.*

(4) A vehicle for pleasure or passengers.

"The Supervisor of Excise who prosecuted said that the word 'carriage,' as defined by the Act of Parliament, meant any vehicle not used for carrying merchandise or any kind of goods."—*London Echo, October 23, 1875.*

(5) Any means of conveyance.

"They are the most useful animals of this country, not only affording excellent fleeces and wholesome flesh, but serving as carriages over rocks and mountains where no other beast can travel."—*Johnson: Life of Drake.*

(6) The cost of carrying or conveying anything.

2. Figuratively:

(1) Conquest, acquisition, gain.

"Solyman resolved to besiege Vienna, in good hope that, by the carriage away of that, the other cities would, without resistance, be yielded."—*Knolles: History of the Turks.*

†(2) Manners, behavior, deportment.

"Let them have ever so learned lectures of breeding, that which will most influence their carriage will be the company they converse with, and the fashion of those about them."—*Locke.*

†(3) Conduct, practices.

"Yesterday Mr. Steele's affair was decided: I am sorry I can be of no other opinion than yours, as to his whole carriage and writings of late."—*Pope: Letter to Congreve (1714-15).*

(4) Management; manner of carrying out or transacting business.

"The manner of carriage of the business was as if there had been secret inquisition upon him."—*Bacon: Henry VII.*

(5) Meaning, intent.

"As, by the same covenant,
And carriage of the article design'd."

Shakesp.: Hamlet, i. 1.

II. Technically:

1. Vehicles: In the senses I. 1 (3) and (4). Carriages of one kind or other have existed from immemorial antiquity. One of the earliest forms was a bullock carriage, of which some specimens of primitive type may yet be seen in India. The simplest is a short plank of wood, which the passenger bestrides, holding on by two upright handles, and inserting his toes between the wheels and the body of the vehicle. The practice of laagering wagons was known to the Romans, and is not a modern discovery, made by the South African Dutch Boers. Horne considers that the making of coaches in England commenced in A. D. 1555. Stage-wagons were introduced into England in 1564, and coaches plied for hire in London in 1625. [CAR, CART, COACH.]

2. Military:

(1) The frame on which a gun is mounted and carried. [GUN-CARRIAGE.]

"He commanded the great ordnance to be laid upon carriages, . . ."—*Knolles: History of the Turks.*

(2) A sword-belt.

"The carriages, sir, are the hangers."—*Shakesp.: Hamlet, v. 2.*

3. Carp: The timber framework on which the steps of a wooden staircase are supported.

†**4. Drainage:** A channel cut for the conveyance of water to overflow or irrigate ground; a carrier.

5. Mach: A portion of a machine which moves and carries an object; as—

(1) The *log-carriage* of a sawing-machine.

(2) The *bit-carriage* of a boring-machine, which carries the bit and is advanced to the work.

(3) The *carriage* of a mule-spinner, which travels toward and from the creel on which the bobbins are skwered.

(4) *Of a horizontal shaft:* The bearings in which it turns.

¶ (1) Crabb thus distinguishes between *carriage*, *gait*, and *walk*: *Carriage* is here the most general

term; it respects the manner of *carrying* the body, whether in a state of motion or rest; *gait* is the mode of *carrying* the limbs and body whenever we move; *walk* is the manner of *carrying* the body when we move forward to *walk*. A person's *carriage* is somewhat natural to him; it is often an indication of character, but admits of great change by education; we may always distinguish a man as high or low, either in mind or station, by his *carriage*; *gait* is artificial; we may contract a certain *gait* by habit; the *gait* is therefore often taken for a bad habit of going, as when a person has a limping *gait*, or an unsteady *gait*; *walk* is less definite than either, as it is applicable to the ordinary movements of men; there is a good, a bad, or an indifferent *walk*; but it is not a matter of indifference which of these kinds of *walk* we have; it is the great art of the dancing-master to give a good *walk*.

(2) For the difference between *carriage* and *behavior*, see *BEHAVIOR*.

B. As adj.: (See the compounds.)

Compounds of obvious signification: *Carriage-builder, carriage-horse, carriage-house.*

carriage-bolt, s. A screw-bolt, with a chamfered head, square neck, and threaded shank, for use in carriage-building.

carriage-brake, s. A retarding apparatus, to reduce the speed of a carriage in descending a hill. [BRAKE.]

carriage-bridge, s.

Milit.: A roller bridge to be moved up a glacis, and form a bridge from counterscarp to scarp, for the passage of the attacking column.

carriage-coupling, s.

1. The coupling of a carriage unites the fore and hind carriages. It is called the perch or reach in carriages that possess it, but in many modern carriages is dispensed with, the bed resting on the fore and hind carriages, forming the only coupling. In wagons, the coupling is a pole, whose forward end is held by the king-bolt in the fore-carriage; the hind end passes through an opening between the hind axle and bolster, and the hounds of the hind axle are fastened to the pole by a pin.

2. A means of uniting the bed to the fore-carriage. It usually consists of a king-bolt, which forms the pintle on which the fore-carriage turns, and the fifth wheel, which is bolted to keep the portions from bouncing apart. (*Knight.*)

carriage-guard, s. A plate on the bed of a carriage where the fore-wheel rubs in turning short.

carriage-jack, s. A lever-jack, designed to raise the axle so as to lift the carriage off the ground for the purpose of removing the wheel from the spindle for repair or greasing. [JACK.]

carriage-lock, s. A fastening for a carriage-wheel, to restrain its rotation or impede its freedom of movement in descending a hill.

carriage-lubricator, s. A self-acting appliance for lubricating a carriage-wheel box and spindle without removing the wheel from the axle.

carriage-piece, s.

Carp.: One of the slanting pieces on which the steps of a wooden staircase are imposed; a rough-string. The upper end rests against the apron-piece or pitching-piece, which is secured to the joists of the landing.

carriage-shackle, s. The bar which connects the axle-slip to the thill or shaft.

carriage-spring, s. An elastic device interposed between the bed of a carriage and its running-gears, to lessen the jar incident to inequalities in the road, and the saltatory and rolling motion of the bed itself.

carriage-step, s. A step, usually on a jointed dependent frame, to afford means for mounting into a carriage.

carriage-top, s.

1. The cover of a carriage. Permanent in coaches; double calash in barouches and landaus; calash in some gigs, buggies, phaetons, &c.; curtained in ambulances and spring-wagons.

2. A shifting-rail on the back and ends of a buggy-seat, to make a high-back, or, by removal, a low-back buggy.

carriage-wheel, s. The wheel of a carriage. This has usually a hub or nave, spokes, fellyes, and tire. A box fitted in the hub runs in contact with the spindle or arm of the axle, and the wheel is held on the spindle by a linch-pin, nut, or other device.

cār'-ried (Eng.), cār'-rī-it (Scotch), pa par. or a. [CARRY, v.]

I. *Gen.:* In senses corresponding to those of the verb.

II. *Specially, in Scotland:*

1. Applied to a person whose mind is in so abstracted a state, that he cannot attend to what is said to him, or to the business he is himself engaged in.

2. In a wavering state of mind, not fully possessing recollection, as the effect of fever.

3. Elevated in mind, overjoyed at any event, so as not to seem in full possession of one's mental faculties; as "Jenny's gotten an heirscaip left her, and she's just *carryit* about it." Sometimes, *carryit up in the air.*

¶ *Carried in nubibus. Lit.:* Carried in the clouds; hence, rendered exceedingly elevated in mind or spirits; abstracted.

cār'-rī-ēr, s. [Eng. *carry*; -er.]

I. *Ordinary Language:*

1. *Gen.:* One who or that which carries anything.

"You must distinguish between the motion of the air, which is but a *vehiculum causæ*, a carrier of the sounds, and the sounds conveyed."—*Bacon: Nat. Hist.*

2. *Specially:*

(1) One whose trade or occupation it is to carry or convey goods.

"... the path was sometimes blocked up during a long time by *carriers*, neither of whom would break the way."—*Macaulay: Hist. Eng., ch. iii.*

(2) One who carries a message, a messenger.

"The welcome news is in the letter found;

The *carrier's* not commissioned to expound;

It speaks itself." *Dryden: Religio Laici, 367.*

II. *Technically:*

1. *Law.:* Two kinds of carriers are recognized by the law, namely, *private carriers* and *common carriers*.

Private carriers are persons who, although they do not undertake to transport the goods of all who may choose to employ them, yet agree to carry the goods of some particular person for hire, from one place to another. In such case the carrier incurs no responsibility beyond that of any other bailee for hire, that is to say, the responsibility of ordinary diligence.—*Story on Bailm., Sec. 495.*

Common carriers are persons or companies who undertake for hire to carry goods for the general public from one place to another. A common carrier is bound to provide safe and suitable conveyances, with proper care and management, failing in which he is not exempt from responsibility, though a providential interference (snow, ice, fire, etc.) be the immediate occasion of loss. Carriers are responsible for all losses, except by providential calamity, act of an enemy in time of war, and fault of the shipper. Carriers may limit their responsibility by special contract, but they cannot free themselves from it wholly, nor escape the duty of ordinary care. If a sender misrepresents the character or value of the goods sent, the carrier is not liable if the goods be stolen. But the sender need not disclose the contents of his package unless asked. Common carriers are responsible for the acts of all their agents. Carriers must deliver goods in as good order as when received. They may

fāte, fāt, fāre, amidst, whāt, fāl, father; wē, wēt, hēre, camēl, hēr, thēre; pine, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rūle, fūll; trȳ, Sȳrian. æ, œ = ē; ey = ā. qu = kw.

refuse to take goods not prepared properly for shipment. They may demand prepayment of freight. If payable at the end of the route, they may hold the goods until payment is made. Baggage may be retained for unpaid fare.

Bills of Lading, Shipment Slips, Receipts, etc., usually specify all the conditions on which goods are carried, but the law does not sustain all the announcements thus made.—2 *Kent*, 471-492.

2. *Elect.*: A proof plane, used to transmit small charges of electricity. It consists of a small piece of gilt paper, with a non-conducting handle.

3. Mechanics:

(1) A piece fastened by a set screw, or otherwise, to work in a lathe, and connecting it with the face-plate; a dog.

(2) A distributing roller in a carding machine.

(3) A roller between the drum and the feeding rollers of a scribbling-machine for spinning wool.

(4) A spool or bobbin-holder in a braiding-machine which follows in the curved path which intersects the paths of other bobbins, and thus lays up the threads into a braid. (*Knight*.)

4. *Drainage*: A small channel for the conveyance of water.

5. *Ornith.*: A carrier-pigeon.

"There are tame and wild pigeons; and of tame there are croppers, carriers, runts."—*Walton*: *Angler*.

carrier-pigeon, s. A name given to a species of pigeon, from their being used to convey letters from any place to their home, now generally called homing pigeons (q. v.).

"Mr. Brent informs me that a friend of his had to give up flying carrier-pigeons from France to England, as the hawks on the English coast destroyed so many on their arrival."—*Darwin*: *Origin of Species* (ed. 1859), ch. xi., p. 362.

carrier-shells, s.

Zoöl.: The English name given to the molluscous genus *Phorus*, which is ranked under the family Trochidae. The name is given because the Phori attach foreign substances to their shells, some preferring stones and others shells or corals. Hence collectors call some of them mineralogists and others conchologists. Nine recent species are known and fifteen fossil, the latter from the Chalk or from the Eocene onward till now. (*Woodward*: *Mollusca*, ed. Tate.)

A. As adj.: Pertaining to Descartes or to his teaching; taught by Descartes.

"The *Cartesian* philosophy begins now to be almost universally rejected, ..."—*A. Smith: Hist. of Astronomy*.

B. As subst.: One who adopts the philosophical tenets of Descartes.

cartesian-devil, *s.* A contrivance to illustrate the effect of the compression or expansion of air in changing the specific gravity of bodies. It is a small glass figure, hollow, and sometimes provided with a hollow bulb on its head. This is to be partly filled with water, and placed in a tall vessel, nearly full of water, and having a piece of caoutchouc secured tightly over the top. On pressing the caoutchouc the air of the vessel will be compressed; this will compress that within the figure or bulb, so admitting more water by a small aperture, and causing the figure to sink. On removing the pressure the air in the figure or bulb will expand, forcing out some of the water, and causing it to rise. (*Francis*.) It is called also a cartesian diver and bottle-imp (q. v.).

car-tēs-i-an-ism, *s.* [Eng. *cartesian*; -ism.] The system of philosophy taught by Descartes. René Descartes in his twentieth year resolved as far as possible to eliminate from his mind all that had ever been taught him by books or by instructors, and think out for himself the entire circle of knowledge. His first postulate was "Cogito, ergo sum"—"I think, therefore I exist." Inquiring next into ideas, which he defined as "all that is in our mind when we conceive a thing, in whatever way we conceive it," he regarded clearness and distinctness as the criterion of a true as distinguished from a false idea. Of all ideas in the human mind that of a God is the clearest, therefore there is a God. As in this clear conception of God infinite veracity is attributed to Him, it is impossible that He could make our faculties deceive us in mathematical and metaphysical demonstrations; these sciences, therefore, are trustworthy. The actual existence of the external world is proved by the prior truth, the existence of God. Creation was and is a manifestation of the Divine will.

Descartes revolutionized mathematics, imparting to it a beneficial impulse. He did likewise to metaphysics. Among his immediate followers in the latter science were Geulinx, Malebranche, and Spinoza. A celebrated opponent was Gassendi. The method of Descartes was adopted by all the philosophers of the rationalistic school who flourished during the latter half of the seventeenth and the whole of the eighteenth centuries. In physics he discovered the law of the refraction of a ray of light through a diaphanous body, but his *a priori* method was not the proper instrument for physical investigation, and his researches in that department were comparative failures. [VORTEX.]

cart'-fūl, ***cart'-fūll**, *s.* [Eng. *cart*, and *ful* (l).] The quantity which will fill a cart.

"The king hath licenc'd certain victuals into the town, and wood upon intreaty of the Cardinal Gondii at twenty-five crowns the *cart-full*, and a cow eight."—*Reliquiae Wottonianae*, p. 614.

car'-thā-mūs, *s.* [Mod. Lat., from Arab. *qurtum*, *qirtim*, from Heb. *garthami*=bastard saffron.]

Bot.: A small genus of composite flowers, containing two annual species, of which one, the Safflower plant or Bastard Saffron (*Carthamus tinctorius*), is extensively cultivated in India, China, &c., as well as Southern Europe. Under the name of Safflower the flowers of this plant are extensively imported into this country, principally from India, for the sake of the two coloring matters, yellow and red, contained in them, which are used for dyeing silk, &c. Mixed with finely powdered talc it forms the well-known substance known as rouge. It is also used to adulterate saffron. According to Col. Sykes the seeds of *C. persicus* produce a useful oil, eatable when fresh. The oil-cake formed from it is very nourishing to milch cattle. In times of scarcity the seeds themselves are eaten while the leaves of the plant are used as greens.

"*Carthamus*, the flower of which alone is used, is an annual plant cultivated in Spain, Egypt, and the Levant. There are two varieties of it; one which has large leaves, and the other smaller ones. It is the last which is cultivated in Egypt, where it is a considerable article of commerce."—*Brande: Dictionary of Arts, Manufactures, and Mines*.

1. *Bot.*: A genus of Myrtaceæ, containing *Caryophyllus aromaticus*, the tree producing the well-known spice called cloves. It is a handsome evergreen, rising from fifteen to twenty feet high. [CLOVE.] It grows in the East Indian Islands. The trees are now extensively cultivated in the West Indies and elsewhere. All parts of the plant are aromatic from the presence of a volatile oil.

2. *Pharm.*: Cloves, the unexpanded flowerbud, dried, of *Caryophyllus aromaticus*, or Clove-tree. The clove has a small tapering, nail-like, reddish-brown body, consisting of a four-toothed calyx, and the unopened corolla.

Caryophylli oleum, oil of cloves, the essential oil distilled from cloves. It is of a light yellow color when fresh, gradually becoming brown-red; specific gravity, 1.055. It consists of a hydrocarbon $C_{10}H_{16}$, containing in solution eugenol $C_{10}H_{12}O_2$, and a crystalline body caryophyllin (q. v.). Cloves contain tannin. Cloves and the oil are stimulant, aromatic, and carminative, and are employed in atonic dyspepsia, to allay vomiting in pregnancy, and to relieve flatulence; also the oil is used to allay by counter irritation the pain of carious teeth.

cār'-y-ōp-sis, *s.* [Gr. *karyon*=a nut; *opsis*=appearance.]

Bot.: A name applied to dry fruit containing a single seed, which is united by all parts with a thin pericarp. This fruit has the aspect of a seed; such is the fruit (commonly called seed) in the family of grasses. (Balfour.)

cār'-y-ō-tā, *s.* [Gr. *karyotos phoinix*=the date-palm; *karyon*=a nut.]

Bot.: A genus of very elegant, lofty palms, with graceful twice pinnate leaves. Nine species are known, all natives of India and the Indian Islands.

They have flowers of different sexes borne upon the same spike, or sometimes on different spikes. From the flower-spikes of *C. urens* a large quantity of the juice called toddy or palm-wine is obtained, and this on boiling yields excellent palm-sugar and sugar-candy. The sago of commerce is prepared from the central or pithy part of the trunk. The fiber of the leaf-stalks is used for making ropes, brooms, mats, &c., and a woolly kind of scurf scraped off the leaf-stalk for calking boats.

II. Technically:

1. Law:

(1) The state of facts juridically considered; as, the lawyers cited many cases in their pleas.

"If he be not apt to beat over matters, and to call up one thing to prove and illustrate another, let him study the lawyer's cases . . ."—*Bacon: Essays*.

(2) A statement of the facts of any matter *sub judice*, drawn up for the consideration of a higher court.

(3) A cause appointed for trial, whether criminal or civil.

(4) The name of an action in very general use which lies for damages where covenant or trespass will not lie.

2. Medicine:

(1) The history of a disease.

(2) A particular instance of any disease.

"Chalybeate water seems to be a proper remedy in hypochondriacal cases."—*Arbuthnot: On Ailments*.

"Blabbing the case of his patient."

Tennyson: Maud, II., v. 37.

3. *Gram.*: The different forms assumed by a word according to its different relations in a sentence. The movable or variable terminations of a noun are called its *case-endings*. In the oldest English there were six cases: Nominative, vocative, accusative, genitive, dative, and instrumental. In modern English only one case, the possessive (the representative of the older genitive), retains a case-ending, but we find traces of others, as in the adverbs *whilom*, *seldom*, and in the pronoun *whom*, where the *m* is the relic of the dative and accusative cases in old English.

III. In special phrases:

1. In case, *in cas.

(1) If it should happen that, supposing that, lest.

"For in case it be certain, hard it cannot be for them to shew us where we shall find it . . ."—*Hooker*.

(2) In a fit condition for anything.

"Thou lyeest, most ignorant monster, I am in case to justle a constable."—*Shakesp.: Tempest*, iii. 2.

(3) Perhaps.

2. If case (be): If by chance, supposing.

3. *Of case, of caise: By chance, accidentally.

"Because eic reuersionis may of case betynt."—*Acts James III.* (an. 1469; ed. 1814), p. 96. (*Of caise*, ed. 1566.)

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camēl, hēr, thēre; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trȳ, Sȳrian. æ, œ = ē; ey = ā. qu = kw.

4. *On or upon case, *on cas: By chance.
5. To put a case *putte caas: To suppose or propose an hypothetical instance or illustration of any case.

"I putte caas that he ha space
Fforth to procede day by day." Lydgate.
"Profits it to put an idle case."
Tennyson: *In Mem.*, xxxv. 18.

6. To set case, *sette cas: The same as to put case.
"I sette cas that a thefe make an hole in a hous, for to take out good."—*Gesta Romanorum* (ed. Herrtage), p. 10.

¶ (1) Crabb thus distinguishes between a case and a cause: "The case is matter of fact; the cause is matter of question; a case involves circumstances and consequences; a cause involves reasons and arguments; a case is something to be learned; a cause is something to be decided. A case needs only to be stated; a cause must be defended; a cause may include cases, but not vice-versa."

(2) For the distinction between case (2) and situation, see SITUATION.

B. As adjective: (See the compounds.)

case-book, s. A book in which a medical man enters the particulars and history of each case treated by him.

case-ending, s. The inflections by which the different cases of a noun, &c., are distinguished. [CASE (2), A. II. 3.]

"The second stage is that in which some words have lost their power of being used as nouns or verbs, and can only be employed as particles, in which capacity they are added to nouns to form case-endings, and to verbs to form tense and person endings."—*Beames: Comp. Gram. Aryan Lang.*, vol. i. (1872). Intro., p. 42.

*case-putter, s. One who puts forward arguments, a lawyer.

"A battered, worm-eaten case-putter."
Otway: *Soldier's Fortune*, ii. 1.

case, s. A slang name given, for some inscrutable reason, to the American dollar, although different writers have ascribed many derivations to the word. Some trace it to the Hebrew *kaser*=a crown, but the better supposition is that it arose among the French-speaking negroes of New Orleans, who, accustomed to hearing a cash-box called *caisse*, by metonymy applied *case* to the contents of the box. The dollar being the unit of American cash the name has naturally been restricted to it. Or it may have been applied by the Chinese denizens of our western cities in commemoration of their native coin—the Cash (q. v.).

cāse (1), v. t. [CASE, s.]

I. Literally:

1. To encase, put in a case or covering.

"The friend with ardour and with joy obey'd.
He cas'd his limbs in brass."

Pope: *Homer's Iliad*, bk. xvi., l. 161-2.

"You spurn me hence, and he will spurn me hither:
If I last in this service, you must case me in leather."
Shakesp.: *Comedy of Errors*, ii. 1.

2. To cover or envelop as a case.

"Then comes my fit again; I had else been perfect,
As broad and general as the casing air."
Shakesp.: *Macbeth*, iii. 4.

3. To cover on the outside; to surround with a casing of a material different to that of which the interior is composed.

"Then they began to case their houses with marble."—*Arbutnot*.

- *4. To strip off the case or covering; to skin or flay.

"We'll make you some sport with the fox ere we case him."—*Shakesp.: All's Well that Ends Well*, iii. 6.

II. Fig.: To cover, hide.

"If thou would'st not entomb thyself alive,
And case thy reputation in a tent."

Shakesp.: *Troil. & Cress.*, iii. 3.

*cāse (2), v. i. [CASE, s.] To put cases; to propose or suggest hypothetical instances or cases.

"They fell presently to reasoning and casing upon the matter with him, and laying distinctions before him."—*L'Estrange*.

*cā-se-a-ble, a. [Eng. case; -able.] Naturally belonging to a particular situation or case.

"Some convulsions he had, where in the opening of his mouth with his own hand, his teeth were somewhat hurt. Of this symptom, very caseable, more din was made by our people than I could have wished . . ."—*Baillie: Lett.*, i. 185.

cās-ē-ār'-ī-a, s. [Named after Casearius, a missionary at Cochin, who assisted Rheede in the *Hortus Malabaricus*.]

Bot.: A genus of plants, order Samydaceae (Samyds). In Brazil the leaves of *Casearia ulmifolia* are applied to wounds, and as an antidote to the bite of serpents, while the juice is drunk by the sick. A decoction of the leaves of *C. lingua* is used internally in inflammatory disorders and malignant fevers. *C. astringens* is employed as a poultice or

lotion for badly-healed ulcers. The root of *C. esculenta*, an East Indian species, is bitter and purgative; the foliage is edible. Finally, *C. Anavinga*, also an Indian species, has very diuretic pulp, while the leaves are used in medicated baths.

cā-se-āte, v. t. [Lat. caseus=cheese; -ate.] To become cheese-like.

cās'-sī-a, s. & a. [Lat. *cassia*; Gr. *kassia* and *kasia*; Ital. *cassia*; Fr. *casse*. For Heb., &c., see 1 Scripture.]

A. As substantive:

1. **Scrp., &c.:** *Cassia* occurs in the following places: (1) Exod. xxx. 24, where the Heb. is *qiddah*, Sept. Gr. *ireōs*, genit. of *iris*; (2) Psalm xlv. 8 (Heb. 9), where it is *getsioth*, which is the fem. pl. of *getsiah*, from *qatsa*=to cut off, to peel off, used of bark, Sept. Gr. *kasia*; and (3) Ezek. xxvii. 19, where it is *qiddah* (see No. 1). In the Septuagint there is a different reading. *Qiddah* is from *qadad*=to

cleave. According to Dr. Royle *qiddah* was probably what is now called *Cassia-bark* (q. v.), and the *getsiah* the same as Syriac *kooshta*, Arab. *koosh* and *koost*, the *Aucklandia Costus*, a composite plant growing near Cashmere, and allied to the Carline-thistle.

"All thy garments smell of myrrh, aloes, and *cassia*."—Ps. xlv. 8.

2. **Bot.:** A genus of plants, order Leguminosæ, suborder Cæsalpiniæ, and tribe Cassiæ. It has five unequal sepals, five petals all yellow, unequal in size but not papilionaceous, ten stamina distinct from each other, the three lowest the longest, the four intermediate ones shorter and straight, and the remaining three sterile or abortive; ovary stalked, usually curved, leaves simply and abruptly pinnated with opposite leaflets, generally with glands on the peduncles. Between 200 and 300 species are known. They are trees, shrubs, or herbs. They are found in India, Africa and the warmer parts of this country. Several furnish Senna. [3. **Pharm.** SENNA.] The seeds of *Cassia Absus*, which are very bitter, are brought to Cairo from the interior of Africa; they are called *Chicin* or *Cismatan*, and are regarded as the best of remedies for Egyptian ophthalmia. The bark of *C. aurata* is used in India medicinally, and also for dyeing and tanning leather. The roasted seeds of *C. occidentalis*, which, notwithstanding its specific name, is found in the East as well as in the West Indies, are used in the Mauritius for coffee, and as a remedy in asthma.

Cassia Occidentalis.

"When, turning round a *cassia*, full in view,
Death, walking all alone beneath a yew."
Tennyson: *Love and Death*.

¶ **Clove Cassia:**

Comm.: The bark of *Dicypellium caryophyllatum*, a lauraceous tree from Brazil.

3. **Pharm.:** Alexandrian senna consists of leaflets of *Cassia officinalis*, var. *lanceolata*, and of *C. obovata*. Indian senna consists of leaflets of *C. officinalis*, var. *elongata*. [SENNA.]

B. As adj.: (See the compounds.)

4. **Socially:** *Cassia* is a plant regarded as sacred in the tenets of Free Masonry, and whenever a brother of the order is interred, sprigs of evergreen, (supposed to represent *Cassia*) are cast into the grave. The allusion is to a beautiful legend in connection with one of the ancient princes of the order, Hiram Abiff, and also to the evergreen memory in which the brother just departed will be held.

cassia-bark (Eng.), **cassia lignea** (Lat.), s.

Pharm.: *Cassia-bark*, or Chinese Cinnamon, is the bark of the *Cinnamomum cassiæ*. It is used to adulterate Ceylon Cinnamon, which is the inner bark of *C. zeylanicum*. It is detected by its greater thickness and roughness, and by having a less aromatic odor and taste. These trees belong to the order Lauraceæ. Dr. Wight has discovered that *cassia-bark* is produced also by several and perhaps by all the species of *Cinnamomum*.

cassia-buds, s. A commercial name for the flower-buds of *Cinnamomum aromaticum*. They are used like those of cinnamon and cloves.

cassia-lignea, s. [CASSIA-BARK.]

cās-sī'-nō, s. [Ital. *casino*=a small house, dimin. of *casa*=a cottage; Fr. *casin*.] A game at cards usually played by four persons (although more can enter the game), two on each side. In it the ten of diamonds, technically called *great cassino*, or *great cass*, counts two; and *little cassino*, or *little cass*, the two of spades, counts one. The points possible to be scored in one deal (exclusive of sweeps) number 9. They are: Big cassino, 2; little cassino, 1; cards, 1; spades, 1; each ace, 1 = 4. A sweep is counted when a player takes up all the cards on the table. The object sought in the game (besides the points already enumerated) is to arrange the cards on the board in combination so that the sum of the

spots on the cards thus combined may equal those on one card in the hand of the player, who has the right to take as many cards from the board as he can thus combine; or he may capture any card from the board the counterpart of which he has in hand.

cās'-sīn-ōid, s. [Named after Cassini, a celebrated mathematician.]

Math.: An elliptic curve, wherein the product of any two lines, drawn from the foci to a point in the curve, shall be equal to the rectangle under the semi-transverse and semi-conjugate diameters.

 And call us—orphans, wretches, *cast-aways*?"
 Shakesp.: *Richard III.*, ii. 2.
 *cas-tayne, s. [CHESTNUT.]
 caste, s. [Fr. *caste*; Sp. & Port. *casta*=a race, lineage, from Lat. *castus*=pure, chaste.]
 1. Literally: An hereditary class of society in India, the members of which are theoretically equal in rank, and, as a rule, follow the same profession or occupation. Formerly it was customary to add "and in Egypt;" but Dr. Birch, the most distinguished Egyptologist of his time, says that the Egyptians, strictly speaking, had not castes, though the son often succeeded to the office of the father. Caste must therefore be viewed in connection with India chiefly, if not exclusively. There it sprung primarily from the distinction of ethnological race and from conquest.
 The aborigines of India seem to have been Turanians. In pre-historic times a second influx of Turanians appears to have taken place, the newcomers conquering the old inhabitants or driving them to the hills and jungles. Thus were produced two classes, what may be called Turanian caste people and Turanian outcasts. Next, but still at a remote period of antiquity, say 1700 B. C., or even earlier, an Aryan people from central Asia invaded the land, and after a struggle, continued for many centuries, became dominant nearly everywhere. Long before this conquest was effected, three occupations among them had hardened into castes the Brahmans or Priests, the Kshetriyas or Warriors, and the Vaisyas or Merchants.
 The fourth Hindoo caste, that of the Sudras, or Artizans and Laborers, was constituted mainly of the Turanian caste-people, while the Pariahs and other outcasts and the wild tribes of the hills and the jungles are the older Turanian aborigines. When the real origin of the four leading castes and the outcasts beyond the pale had been forgotten, the Brahmans attempted to base the structure of society on what was alleged to be divine revelation. It was gravely asserted that the Brahmans came out of the mouth of the Supreme God to instruct men, the Kshetriyas from his arms to defend them, the Vaisyas from his stomach to feed them, and the Sudras from his feet to serve them.
 Buddhism did its best to destroy caste, but after a struggle of about 1,250 years (say from 500 B. C. to 750 A. D.), during 1,000 years of which (from B. C. 250 to A. D. 750) it was victorious, it had to quit the field. [BUDDHISM.] For the next 300 years caste was dominant and tyrannical in a high degree. Then the Mussulman conquest began to break its power. Now Anglo-Indian influences, political, religious, and social, are sapping its authority, especially at the Presidency seats.
 Through the long ages during which Indian caste has existed, the original four castes have split into an immense multitude, and at present in almost any locality from 100 to 200 may be met with. Different castes refuse to eat together or to intermarry, and as a rule they follow hereditary occupations, but nature is often too powerful for artificial and arbitrary restrictions. [ARYAN, BRAHMANISM, EURASIAN, MUTINY, MISSION.]
 2. Fig.: Any distinct rank or class of society, especially if it shut its ranks against the ingress of strangers.

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camel, hēr, thēre; pīne, pīt, sīre, sīr, marine; gō, pōt, or, wēre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trȳ, Sȳrian. æ, œ = ē; ey = ā. qu = kw

¶ *Caste* and *rank* are not the same, though in many cases they interpenetrate and support each other. The man of highest rank in India is the Governor-General, who takes precedence even of the highest Hindoo Rajahs (kings); but by caste law he is an outcast, not higher than a Pariah. The relations between white and dark men, specially if the latter be negroes, are essentially caste relations. The generality of Americans or Europeans would never think of legally intermarrying with negroes, regarding them as doomed by their color to be forever the inferiors of the white man. The hereditary nobility of Britain are not, strictly speaking, a caste, despite their legislative privileges; one born a commoner can be created a nobleman, but no Sudra can, by any process of creation known to man, be made a Brahman.

"But to be subjugated by an inferior caste was a degradation beyond all other degradation."
—*Macaulay: Hist. Eng.*, ch. ix.

"Her manners had not that repose
Which stamps the caste of Vere de Vere."
—*Tennyson: Lady Clara Vere de Vere*.

¶ *Caste Christians*: Hindoo converts who have not been required at baptism to surrender their castes. The converts of the great missionary, Christian Frederick Swartz, who labored in India from 1750 to 1798, and those of many of his successors, were caste Christians; but the great majority of modern Protestant missionaries insist on caste being renounced at baptism; those of the Roman Catholic Church, on the other hand, permit it to be retained.

**cast-ēd*, *pa. par.* or *a.* [An improper formation from *cast*, *v.*] *Cast*.

"The hound turnyde agen to his *castynge*, and a sowe is waischen in walewing in fenne."—*Wycliffe: 2 St. Peter*, ii. 22.

II. *Technically*:

1. *Metallurgy*:

(1) The act of forming metal in a mold.

¶ It is believed that the art of shaping metal by the hammer, chisel, and graver is older than that of casting it in a melted state in a mold. But casting is of very considerable antiquity, thus the golden calf made by Aaron was first "molten," *i. e.*, melted and then graven (Exod. xxxii. 4, 24), and the brass (copper or bronze) vessels for Solomon's temple were also cast (1 Kings vii. 46, 47). Cast-iron statues are mentioned by Pausanias about A. D. 120, but nothing else of cast-iron is known to have existed in classic times. About A. D. 1709, John Thomas, a Welsh boy, devised an effective method of casting iron, and he and his employer successfully carried out the process (which was long kept a secret). It is now one of the great industries. [FOUNDING.]

"After this manner he made the ten bases; all of them had one *casting*, one measure, and one size."—*1 Kings* vii. 37.

"... everything betokens great perfection in the *casting* of metals during the bronze period."—*Kemble: Hore Ferales*, p. 54.

(2) That which is cast in a mold.

2. *Nat. Hist.*:

(1) The act of molting.

"The casting of the skin is, by the ancients, compared to the breaking of the secundine, or cawl, but not rightly; for that were to make every casting of the skin a new birth."—*Bacon: Natural and Experimental History.*

(2) The cast feathers, excrements of hawks, &c.

3. *Bee-keeping*: A swarm. [CAST, s., B. 5.]

4. *Building*: A coating of lime or plaster.

5. *Joinery*: The bending of the surfaces of a piece of wood from their original position, either by weights, or by unequal exposure to the weather.

6. *Sculpture*: The taking casts of impressions of figures, busts, medals, &c.

7. *Pottery*: The act of stamping clay ware. Delicate objects, which cannot be readily molded by pressing the clay into the mold, are cast by the following process: The plaster mold being closed, the slip or creamy clay is poured in, and the portion nearest to the mold becomes hardened by the absorption of the water by the mold. The fluid portion is then poured out, and the mold partially dried. A second filling of slip yields another coating, and the process is repeated as often as may be necessary to give the required thickness to the casting. (*Knight*.)

8. *Theat.*: The assigning of actors or actresses to take a certain part or parts in a play.

¶ *Casting* is used in combination with many prepositions; as, a casting away, a casting off, &c.; for the meanings of all which see the corresponding uses of the verb.

cas'-tōr (2), s. & a. [From *Agnus castus*, the old name of the Castor-oil plant.] (For definition see etymology.)

castor-oil, s.

Pharm.: *Ricini Oleum*, a thick, viscid, pale oil, of a peculiar odor, and slightly acrid taste. It is expressed from the seeds of *Ricinus communis*, the Castor-oil plant (q. v.). Castor-oil is soluble in alcohol. It is a mild, quick, safe purgative, causing only evacuation of the bowels, and is used in cases of gastritis, enteritis, and dysentery, or wherever there is irritation, or inflammation of the mucous membrane of the digestive tract. Castor-oil expressed from the seeds without the aid of heat is called "cold-drawn castor-oil." It usually gripes the patient to an appreciable extent, and in administering it to children it is well to boil it, as the boiling has a tendency to mollify the acrid properties and prevent griping at stool.

Castor-oil plant:

Bot.: A plant, belonging to the order Euphorbiaceæ, growing in the East Indies. The seeds are oval, compressed, about the size of small beans, of a light ash color marbled with dark spots and veins. It has been introduced into the milder climates of this country; in the Southern States being cultivated as a garden plant. It is generally called *Palma Christi*=Palm of Christ, in allusion to the fancied resemblance of its leaves to a human hand.

Castor-oil plant.

Cas'-tôr (3), *s.* [Lat., from Gr. *kastôr*.]

1. *Old Mythol.*: One of the twin sons of Jupiter and Leda, the other being Pollux. After their death they were placed among the stars, forming the constellation now known as Gemini or the Twins.

2. *Astron.*: One of the two bright stars constituting the constellation Gemini (the Twins). It is *Alpha Geminorum*. It is a binary star, one of the two into which a telescope resolves it revolving around the other in about 1,000 years.

3. *Min.*: A mineral described at the same time as another one named Pollux. [CASTORITE.]

Castor and Pollux, s.

1. *Meteorol.*: A fiery meteor, which appears sometimes sticking to a part of the ship, in form of one, two, or even three or four balls. When one is seen alone, it is called Helena, which portends the severest part of the storm to be yet to come; two are denominated *Castor and Pollux*, and sometimes *Tyndarides*, which portend a cessation of the storm. [Chambers.] [CORPOSANT.]

2. *Astron.*: The name of a constellation, also called Gemini, or the Twins.

cas'-tôr (4), *s.* [In Fr. *castorin*; from Lat. *castor* (1) (q. v.).]

Fabric: A heavy milled cloth for overcoats.

cās-tôr'-ě-ŭm, s. [Lat., from *castor*=a beaver.]

Pharm.: The pharmacopœial name for the peculiar mucilaginous substance found in the two inguinal sacs of the beaver. It is very odorous, soft, and almost fluid when first taken from the animal, but becomes dry and of the consistence of resin. It has an acrid, bitter, and nauseous taste.

cās-tôr'-i-dæ, s. pl. [Lat. *castor*=a beaver; fem. pl. suff. *-idæ*.]

1. *Zoöl.*: A family of Rodents, of which the Castor, or Beaver is the typical genus. They are of stout make, possess distinct clavicles, and have five toes, those of the hind feet being connected by a web or membrane. Genera, *Castor* and *Myopotamus* (q. v.).

2. *Palæont.*: No Castoridae have as yet been found earlier than the Miocene. Among the genera two contain animals of large size, *Trogonotherium* and *Castoroides*; the former is Pliocene and Post-Pliocene, the latter Post-Pliocene only.

cās-tôr-in, cas'-tôr-ine, s. [Eng. *castor*; suff. *-in, -ine* (Chem.).]

***cās-tra-mē-tā'-tion, s.** [Fr., from Lat. *castra*=a camp; *metatio*=a measuring; *metor*=to measure.] The art or science of arranging a camp.

"Between Chadlington and Saresden is also an unmentioned camp, either Saxon or Danish, for both are concerned in this question; and their *castrametation*, even under the most practicable and commodious circumstances of ground, is sometimes ambiguous."—*Warton: History of Kiddington*, p. 50.

"Plunged, nothing loath, into a sea of discussion, concerning wars . . . and the rules of *castrametation*."—*Scott: Antiquary*, ch. i.

cās-trā-te, v. t. [Lat. *castratus*, pa. par. of *castrare*=to geld.]

1. *Lit.*: To geld, emasculate.

"Origen—having read that scripture, 'There be some that castrate themselves for the kingdom of God,' which was but a parabolical speech, he did really, and therefore foolishly, castrate himself."—*Bishop Morton: Discharge of five Imputations from the Romish Party*, p. 138.

II. *Figuratively*:

*1. To mortify, to deaden, to deprive of power or vigor.

"Ye castrate the desires of the flesh, and shall obtaine a more ample reward of grace in heaven"—*Martin: Treatise on the Marriage of Priests*, Y. i. b. 1554.

2. To expunge obscene passages from a book; to expurgate.

cās-trā-tēd, pa. par. & a. [CASTRATE, v.]

cās'-ŭ-āl, a. & s. [Fr. *casuel*; Ital. *casuale*; Lat. *casualis*=pertaining to chance; *casus*=chance.]

A. *As adjective*:

1. Happening by chance, accidental.

"Of the broad vale, casting a *casual* glance
We saw a throng of people—wherefore met?"
Wordsworth: *Excursion*, bk. ii.

2. Dependent on chance; uncertain.

"The revenue of Ireland, both certain and *casual*, did not rise into ten thousand pounds."—*Dav.: On Ireland*.

3. Trivial, commonplace.

"The commissioners entertained themselves by the fire-side in general and *casual* discourses."—*Clarendon*.

¶ (1) Crabb thus discriminates between *accidental*, *incidental*, *casual*, and *contingent*: "*Accidental* is opposed to what is designed or planned; *incidental* to what is premeditated; *casual* to what is constant and regular; *contingent* to what is definite or fixed. A meeting may be *accidental*, an expression *incidental*, a look, expression, &c., *casual*, an expense or circumstance *contingent*." (Crabb: *Eng. Synon.*)

(2) He thus distinguishes between *occasional* and *casual*: "These are both opposed to what is fixed or stated; but *occasional* carries with it more the idea of unfrequency and *casual* that of unfixedness, or the absence of all design. A minister is termed an *occasional* preacher who preaches only on certain occasions; his preaching at a particular place on a certain day may be *casual*." (Crabb: *Eng. Synon.*)

B. *As substantive*:

1. A tramp, a vagrant; one who receives relief and shelter for one night in the workhouse of a parish to which he does not belong.

cās-ŭ-ar-i'-nā, s. [So named by Rumphius, probably from a fancied resemblance in the foliage to the feathers of the Cassowary. (*Graham: Flora of Bombay*.)]

Bot.: A genus of plants, the typical one of the order Casuarinaceæ (q. v.).

cās-ŭ-ar-i-nā'-çē-æ, s. pl. [From Mod. Lat. *casuarina*, and fem. pl. adj. suff. *-aceæ*.]

Bot.: An order of abnormal exogens, alliance Amentales. Only one genus is known, *Casuarina*. They have a one-celled ovary, one or two ascending ovules, and a superior radicle. There are no leaves, but in place of them short, toothed, riched sheaths. They are trees like Giant Equiseta (Horse-tails). They have closer affinities, however, with Myricaceæ or with Coniferae. They occur in Australia, New Caledonia, and the Indian Archipelago. They are generally called Beefwoods, their timber being of the color of raw beef. In Australia they are often termed oaks. In *Graham's Flora of Bombay* one species is called the Cassarina or Tinian Pine. The heavy war-clubs of the native Australians are of *Casuarina*. The bark of *Casuarina equisetifolia* is slightly astringent; that of *C. muricata* is used as infusion in India as a tonic. The young cones of *C. quadrivalvis*, when chewed, yield a pleasant acid, and are useful to those who cannot obtain water. Cattle also are exceedingly fond of them. About thirty-two species are known.

cās-ŭ-ār-ŷ-ŷs, s. [CASSOWARY.]

II. Nautical:

(1) A light air perceived at a distance in a calm by the impressions made on the surface of the sea, which it sweeps very gently, and then passes away, being equally partial and transitory.

(2) A name given to a particular twisting hitch made in the bight of a rope, so as to induce two bights, in order to hook a tackle on them both. (*Smyth.*)

* (3) Good-looking seamen employed to entice volunteers.

cat's-pellet, s. A game, perhaps the same as tip-cat.

"Who beats the boys from *cat's-pellet* and stool-ball?"—*Brit. Bellman*, 1648, *Harl. Misc.*, vii. 625.

cat's-purr, s.

Physiol.: A sound in the lungs of man or in the heart, like the purring of a cat, heard by means of the stethoscope.

cat's-skin, s.

Naut.: A light partial current of air, as with the cat's-paw.

*cat's-smere, s.

Bot.: An old name for a plant, *Axungia*. (*Wright.*)

cat's-spear, s.

Bot.: *Typha latifolia*. (*Gerarde.*)

cat's-tail, *catstaile, s.

Botany:

1. The book-name of several plants—(1) *Equisetum*, Horse-tail, various species, especially *E. arvense*, (2) *Typha latifolia*, (3) *Typha minor*, or smaller Bulrush, (4) *Aconitum napellus*, (5) *Phleum pratense*, from the shape of the spike [CAT'S-TAIL GRASS], (6) *Echium vulgare*, (7) *Amaranthus caudatus*.

2. The catkins of the hazel or willow.

3. The catkins of *Juglans regia*.

4. A long round substance that grows in winter upon nut-trees, pines, &c.

Cat's-tail grass, cats-taile grasse:

Bot.: A general book-name for *Phleum pratense* and other species. (*Britten & Holland.*)

căt, v. t. [CAT, s.]

Naut.: To bring up to the cat-head.

"When the cat is hooked, and cable enough veered and stoppered, the anchor hangs below the cat-head, swings beneath it; it is then hauled close up to the cat-head by the purchase called the cat-fall. The cat-stopper is then passed, and the cat-block unhooked. (*Smyth.*)

**căt-a-băp'-tist, s.* [Gr. *katabaptistēs*, from *kata*=down, against, and *baptistēs*=a baptizer; *baptizō*=to baptize.] One who abuses or is against baptism.

"Of these anabaptists, or catabaptists, who differ no more than Bavius and Mœvius, Alstedius maketh fourteen sorts."—*Featley: Dippers Dipt*, p. 23.

ca-tăb'-ô-lîsm, s. [Gr. *katabole*=a throwing down, and suff. -ism.] Destructive metabolism, in which complex bodies are broken down into simpler and simpler waste bodies; opposed to *anabolism*.

cat-a-brô'-şa, s. [From Gr. *katabrōsis*=an eating up, a devouring. So named from the erose appearance of the glumes.]

Bot.: Whorl-grass. A genus of Gramineæ (Grasses). Tribe, Festucæ.

căt-a-căus'-tic, a. & s. [Fr. *catocaustique*, from Gr. *katakaustikos*, from *kata*=down, and *kaustikos*=burning; *kaiō*=to burn.]

A. As adjective:

Geom. & Optics: Relating to or of the nature of the curve described in B.

B. As substantive:

Geom. & Optics:

1. *Sing.*: A curve formed by joining the points of concurrence of several reflected rays proceeding from one radiating point.

2. *Pl.*: The caustic curves formed by the reflection of the rays of light.

căt-a-chrê'-sis, s. [Low Lat. *catachresis*; Gr. *katachrêsis*=a misuse, from *katachrêsthai*=to misuse; *kata*=back, against, and *chrêsthai*=to use.]

Rhet.: The abuse of a trope, when the words are too far wrested from their native signification; or when one word is abusively put for another, for want of the proper word, as, *a voice beautiful to the ear*. (*Smith: Rhetoric.*)

*căt-a-chrê'-tic, *căt-a-chrê'-ti-căl, a.* [Gr. *katachrêstikos*=of or pertaining to catachresis.] In the manner of a catachresis, involving a catachresis; improper, far-fetched.

"A catachrestical and far derived similitude it holds with men, that is, in a bifurcation."—*Browne: Vulgar Errors*.

**căt-a-chrê'-tic-al-lŷ, adv.* [Eng. *catachrestical*; -ly.] In a catachrestic manner; in a forced or exaggerated manner.

"Where, in divers places of Holy Writ, the denunciation against groves is so express, it is frequently to be taken but *catachrestically*."—*Evelyn*, iv., § 4.

căt-a-clê'-sis, căt-a-clî'-sis, s. [Gr. *katakleisis*=a closing down.]

Pathol.: A morbid closure of the eyelids by adhesion or by spasm.

căt'-a-clŷm, s. [Fr. *catactysme*, from Gr. *kataclysmos*=a deluge, from *kata*=down, and *klyzō*=to wash over.]

*1. *Ord. Lang.*: A deluge, an inundation.

"The opinion that held these *catactysms* and empty roses universal, was such as held that it put a total consummation unto things in this lower world."—*Hale: Origin of Mankind*.

2. *Geol.*: A sudden or violent rush of water, considered as the efficient cause by which certain phenomena have been produced, rather than by the gradual action of moderate currents, or by that of ice.

căt-a-clŷ'-măl, a. [Eng. *catactysm*; -al.] Of or pertaining to a catactysm; caused by or arising from a catactysm.

căt-a-clŷ'-mist, s. One who believes in the catactysmal theory regarding certain geological phenomena.

căt'-a-cômb (b silent), s. [Fr. *catacombe*; Ital. *catacomba*; Sp. & Port. *catacumba*, from Low Lat. *catacumba*=a catacomb, from Gr. *kata*=down, and *kymbē*=a hole, a hollow.] Subterranean cavities for the burial of the dead, those near Rome being supposed to be the caves and cells where the primitive Christians hid and assembled themselves, and where they interred the martyrs; which are accordingly visited with devotion. These are the most celebrated, but there are many others in various parts of the world. The catacombs of Paris are simply charnel-houses. The word is also occasionally used in the general sense of an excavated burying-place.

căt'-a-cor-nêred, adv. Diagonally; catercornered. (*Colloq.*)

căt-a-côus'-tics, s. [In Fr. *catacoustique*, from Gr. *kata*=against, and *akoustikos*=pertaining to hearing; *akouō*=to hear.]

1. *Physics*: That science which treated of reflected sounds or echoes.

2. *Fortific.*: Small galleries which communicate with a gallery parallel to the covertway. (*Crabb.*)

căt-a-dî-ôp'-tric, căt-a-dî-ôp'-tri-căl, a. [Fr. *catadioptrique*, from Gr. *kata*=against, and *dioptrikos*=pertaining to the *dioptra*=a leveling staff, from *dia*=through, and *opticos*, verb. adj. from *horaō*=to look, to see.] [DIOPTRICS.]

Optics: Pertaining to or involving both the reflection and refraction of light, as a catadioptric telescope.

catadioptric-light, s. A mode of illumination for lighthouses in which reflection and refraction are unitedly employed. It was suggested by Robert Stevenson in 1834. From their subjecting the whole of the available light to the corrective action of the instrument, they have been called holophotal lights.

căt-a-dî-ôp'-trics, s. [CATADIOPTRIC.] The science which treats of or is connected with the use of catadioptric instruments.

căt'-a-drôme, s. [Gr. *katadromos*, from *kata*=down, *dromos*=a course; *dramein*, second aorist infinitive of *trechō*=to run.]

1. *Ord. Lang.*: A race-course.

2. *Mech.*: A machine for hoisting heavy weights.

**căt'-a-dûpe, s.* [Fr. *catadupe*, *catadoupe*, from Low Lat. *catadupa*; Gr. *katadoupoi*=falling with a heavy noise—a term applied to the cataracts of the Nile; *kata*=down, and *doupos*=a dead, heavy sound.]

1. A cataract or water-fall, especially one of those of the Nile.

2. A person living in the neighborhood of the Nile cataracts.

*căt'-a-fălque (fălque as fălk), *căt-a-făl'-cô, s.* [Ital. *catafalco*=a scaffold, funeral canopy; Sp. *cadafalso*; O. Fr. *escadafaud*; Fr. *catafalque* and *échafaud*; from O. Sp. *catar*=to see, to view, and Ital. *falco*, for *palco*=a scaffold, a stage.]

1. A temporary bier or structure of carpentry-work, decorated with paintings, &c., and used in funeral solemnities.

2. A kind of open hearse or funeral car.

căt-a-gên'-e-sis, s. [Gr. *kata*=down, and *genesis*=generation. *Biol.*: Creation by retrograde metamorphosis of energy or by the specialization of energy.]

căt-ag-măt'-ic, a. & s.

[Fr. *catagnatique*, from Gr. *katagma*=a fracture, from *katagnymi*=to break; *kata*=down, *agnymi*=to break.]

A. As adjective:

Surg.: Having the property or quality of uniting or consolidating broken parts or fractures.

Catafalque.

bôil, bôy; pout, jôwl; cat, çell, chorus, çhin, bench; go, gem; thin, this; sin, aş; expect, Xenophon, exist. ph = f. -cian, -tian = şan. -tion, -sion = şhın; -tion, -şion = zhın. -ticus, -cious, -sious = şhş. -ble, -die, &c. = bel, del-

B. As subst.: A medicine having such property or quality.

***căt'-a-grăph, s.** [Gr. *katagraphē*=a drawing, a delineation; from *kata*=down, and *graphē*=a drawing; *graphō*=to write, describe.] The first draught or outline of a picture; also, a profile.

căt'-a-lan, a. & s. [Catalonia, a district of Spain.]

A. As adj.: Of or pertaining to Catalonia.

B. As substantive:

1. **Ord. Lang.:** A native of Catalonia.

2. **Blasting:** A blast-furnace for reducing iron ores, extensively used in the north of Spain, particularly in the province of Catalonia. It consists of a four-sided cavity or hearth, which is always placed within a building and separated from the main wall thereof by a thinner interior wall, which in part constitutes one side of the furnace. The blast-pipe comes through the wall, and enters the fire through a tuyere which slants downward. The bottom is formed of a refractory stone, which is renewable. The furnace has no chimneys. The blast is produced by means of a fall of water, usually from 22 to 27 feet high, through a rectangular tube, into a rectangular cistern below, to whose upper part the blast-pipe is connected, the water escaping through a pipe below. This apparatus is exterior to the building, and is said to afford a continuous blast of great regularity; the air, when it passes into the furnace, is, however, impregnated with moisture.

căt-a-lēc'-tīc, *căt-a-lēc'-tīck, a. & s. [Lat. *catalecticus*, from Gr. *katalēktikos*=stopping short, from *kata*=down, and *lēktikos*=stopping, from *lēgō*=to stop.]

A. As adjective:

Pros.: Stopping short; used of a rhythm which is incomplete by reason of its being short by a syllable (or more) of the full measure.

"A stanza of six verses, of which the first, second, fourth, and fifth, were all in the octosyllable meter, and the third and last *catalectic*; that is, wanting a syllable, or even two."—*Tyrwhitt: On Chaucer's Versification.*

B. As subst.: A verse which is incomplete, wanting a syllable at the end.

***căt-a-lēc'-tīcs, s.** [Gr. *katalassō*=to exchange; from *kata*=down, back, and *allassō*=to change.] The science of exchanges, now called political economy.

căt-a-lēp'-sīs, căt-a-lēp'-sỹ, s. [Gr. *katalēpsis*=a sudden seizure; from *kata*=down, and *lēpsis*=a seizing; from *lambanō*=to take, to seize.]

Med.: A form of mental disorder, akin to hysteria, which is characterized by the person affected falling down suddenly in a state of real or apparent unconsciousness, and, save for some occasional muscular twitchings of the face and body, remaining rigid and statue-like for a period of time, which varies from one minute to some hours or even days, and then all at once recovering consciousness as if aroused from sleep—as a rule with no bad consequences to follow. Catalepsy almost invariably affects hysterical people only, and it is the prolongation of the unconscious condition to some days in certain extreme cases which has given rise to the fear which some people have of being buried alive under such circumstances.

căt-a-lēp'-tīc, a. [Gr. *katalēptikos*=liable to catalepsy; *lēptikos*=liable to be seized; *lambanō*=to seize.] Pertaining to or of the nature of catalepsy; subject to catalepsy.

†căt-āl'-ō-gīze, v. t. [Gr. *katalogizomai*=to reckon up, to compute; *katalogos*=a reckoning, a catalogue; *kata*=down; *logos*=a telling; *legō*=to tell.] To enumerate in a catalogue, to catalogue. (Coles.)

căt-a-lōgue (ue silent), *căt-a-log, *căt-log, s. [Fr. *catalogue*; Lat. *catalogus*, from Gr. *katalogos*=a reckoning, a catalogue; *kata*=down; *logos*=a telling, an enumerating; *legō*=to tell.]

I. Ord. Lang.: A list or systematic enumeration of articles generally in alphabetical order.

II. Astron.: A list of stars, with materials appended for indicating their latitudes and longitudes, or their declinations and right ascensions.

catalogue raisonné, s.

Bibliography: A catalogue of books in which they are subdivided and classed according to their subjects.

†căt-a-lōgue (ue silent), v. t. [CATALOGUE, s.] To enumerate in a catalogue, to make a list or catalogue of.

căt-a-lōg-uēr, căt-a-lōg-uīst, s. One who makes catalogues.

căt-a-lōg-uēr, s. A person who makes catalogues.

căt-a-lōg-uīng (u silent), pr. par., a. & s. [CATALOGUE, v.]

As subst.: The act of enumerating or setting down in a list or catalogue.

căt-āl'-pa, s. [From the native Indian name in Carolina, where it was discovered by Catesby in 1726.]

Bot.: A genus of Bignoniaceæ, comprising four or five species of trees, natives of North America, the West Indies, Japan, and China. They have been introduced into Europe, and are cultivated in France, Germany, and the south of England. The wood is remarkably light, of a grayish-white color, and fine in texture. It is capable of receiving a brilliant polish, and when properly seasoned is very durable. The bark is reputed tonic, stimulant, and antiseptic, and the honey from its flowers poisonous. A decoction of the pods of *Catalpa syringifolia* is used in Italy as a remedy for catarrhæal dyspnoea and coughs.

***căt'-als, s. pl.** [CATTLE, CHATTEL.]

Law: Goods and chattels. (Wharton.)

ca-tāl'-y-sīs, s. [Gr. *katalysis*=a dissolving; *katalyō*=to dissolve; *kata*=down, *lyō*=to loosen.]

1. **Physics:** The effect produced by the presence of a substance, which itself undergoes no permanent change, in facilitating a chemical reaction.

2. **Ord. Lang. (Fig.):** A dissolution or ending, decay.

"While they were in thoughts of heart concerning it, the sad *catalysis* did come, and swept away eleven hundred thousand of the nation."—*Bp. Taylor.*

căt-a-lỹs'-ō-tỹpe, s. [From Gr. *katalysis*=a dissolving, and *typos*=a blow; the impress of a blow; an outline, a type.]

Photog.: A calotype process in which the paper is first prepared with a syrup of iodide of iron, instead of the iodide of potassium. The name was given to the process to indicate the supposed fact that the gradual self-development of the picture is the result of a catalytic action. The true chemical reaction is now understood.

căt-a-lỹt'-īc, a. [Gr. *katalytikos*, from *katalyō*=to dissolve.]

Chem.: Of or pertaining to the action or power called catalysis; having power to dissolve.

catalytic force, s.

Physics: That modification of the force of chemical affinity which determines catalyses.

"An interesting class of decompositions has of late attracted considerable attention, which, as they cannot be accounted for on the ordinary laws of chemical affinity, have been referred by Berzelius to a new power, or rather new form of the force of chemical affinity, which he has distinguished as the *catalytic force* and the effect of its action as *catalysis*."—*Graham: Elem. of Chemistry*, p. 196.

căt-a-mar-ān, s. [Ceylonese native name *cāthā-mārān*=floating trees. (Mahn.)]

1. A kind of boat, vessel, or, more accurately, raft or float used by the Hindoos of Madras, the island of Ceylon, and the parts adjacent. It is formed of three logs of timber, secured together by means of three spreaders and cross lashings through small holes. The central log is much the largest, with a curved surface at the fore-end, which terminates upward in a point. The side logs are very similar in form, but smaller, and with their sides straight; these are fitted to the central log. The length of the whole is from twenty to twenty-five feet. The crew consist of two men. In the monsoons, where a catamaran is able to bear a sail, a small outrigger is placed at the end of two poles as a balance, with a bamboo mast and yard, and a mat or cotton sail. Frail as such a structure may appear, it can pierce through the surf on the beach at Madras and reach a vessel in the bay when a boat of ordinary construction would be sure to founder.

"The *catamarans* used in the Brazils, and which are also common in the East Indies, consist of three logs of wood tapered at one end and lashed together. They are furnished with paddles, and are said to pull as fast as boats, the men being squatted in a kneeling position, and managing them with wonderful dexterity in passing the surf which beats on the shores. Those used in the Brazils also carry sail."—*Young: Nautical Dictionary.*

2. An incendiary raft. Used specially of those rafts which on October 2, 1804, Sir Sydney Smith in vain attempted to use for the destruction of the Boulogne flotilla designed by Napoleon I. for the invasion of England.

3. A scolding woman, a termagant.

căt-a-mē'-nī-a, s. [Lat., from Gr. *katamēnia*=menses; *kata*=down, *mēn*=a month.]

Med.: The discharge of a sanguineous fluid from the womb, which, in the case of healthy women,

occurs every month. The discharge is due to certain peculiar changes which take place in the Graafian vesicles of the ovaries. It begins at the age of puberty, a period which varies under varying conditions of climate and civilization, and terminates in what is popularly called the "change or time of life," which occurs usually between the ages of forty and forty-nine. The interval between these two periods is called the "child-bearing period." The term *catamenia*, though used largely by medical men, is not so well known as another, which has exactly the same meaning, viz., *menses*.

"Two ancient Hindoo sages are of opinion, that if the marriage is not consummated before the first appearance of the *catamenia*, the girl becomes 'degraded in rank.'"—*Dunn: On the Unity of the Human Species.*

căt-a-mēn'-ī-āl, a. [Lat. *catameni(a)*; -al.] Of or pertaining to catamenia or the menstrual discharge.

"The only marked exception occurs in the case of the Hindoo females, with whom, on an average, the *catamenial* flux appears about two years earlier than it does among other nations."—*Dunn: On the Unity of the Human Species.*

***cat'-a-mint, s.** [CATMINT.]

†căt-a-mīte, s. [Fr., from Lat. *catamitus*=an old form of *Ganymedes*; Gr. *Ganymēdēs*=Ganymede, a boy who, for his exceeding beauty, was taken up to heaven by Jupiter's bird, the eagle, and made cup-bearer to the chief of the gods.] A boy kept for unnatural purposes.

căt-a-mōunt'-ain, *kăt'-a-mōunt'-ain, căt'-a-mōunt, s. [Eng. *cat*, and *mountain* or *mount*; Sp. *gato montes*=cat of the mountain.]

Zoöl.: The North American tiger, *Felis* (or *Puma*) *concolor*, the Cougar or Puma.

"Would any man of discretion venture such a gristle to the rude claws of such a *katamountain*?"—*Beaumont & Fletcher: Custom of the Country.*

"The black prince of Monomotapa, by whose side were seen the glaring *catamountain*, and the quill-darting porcupine."—*Arb. and Pope: Mart. Scriblerus.*

¶ Used as separate words.

"As *cattes of the mountayn*, they are spotted with diverse fylke fantasies."—*Bale: Discourse on the Revelation*, p. 2, sign. d. vi., 1550.

căt-an-ād'-rō-mōūs, căt-ān'-drō-mōūs, a. [Gr. *kata*=down, *ana*=up, and *dromos*=a running, a course; from *dramein*, second aorist infinitive of *trechō*=to run.]

Ichthy.: Applied to those fishes which pass once a year from salt water into fresh, and return again from the fresh to the salt.

căt-a-nān'-ch-ē, s. [Gr. *katanankē*, a strong incentive used by Thessalian women in their incantations; from *kata*=down, and *anankē*=necessity.]

Bot.: A genus of plants belonging to the chioraceous tribe of compound flowers, distinguished by its scarious involucre and the awned chaffy scales which crown its fruit. They are principally natives of the south of Europe, and have white or blue flowers. They are perennials.

căt-a-pāsm, s. [Gr. *katapasma*=a sprinkling, a powdering; from *katapassō*=to sprinkle, to powder, from *kata*=down, and *passō*=to sprinkle.]

Med.: A dry medicine in powders, used for sprinkling on ulcers, for absorbing perspiration, &c. They were divided into *diapasm*s, *empasm*s, and *sym-pasm*s. (See these words.)

***căt-a-pēl'-tīc, a. & s.** [Gr. *katapeltikos*=pertaining to a catapult; *katapeltēs*=a catapult.] [CATAPULT.]

A. As adj.: Of or pertaining to a catapult.

B. As subst.: A catapult.

***căt-a-pēt'-al-ōūs, a.** [Gr. *kata*=down, *petalon*=a leaf, and Eng. suff. -ous.]

Bot.: Having the petals slightly united by their inner edge near the base, as in the mallow; a form of polypetalous.

"If the petals adhere to the bases of the stamens so as to form a sort of spurious monopetalous corolla, as in *Malva* and *Camellia*, such a corolla has been occasionally called *catapetalous*, but this term is never used, all such corollas being considered *polypetalous*."—*Lindley: Introd. to Bot.*, 3d ed., p. 167.

căt-a-phā'-sī-a, s. [Gr. *kataphasis*=affirmation.]

Pathol.: A condition of imperfect consciousness, in which the patient repeatedly utters the same word or words spontaneously, or in answer to a question.

căt-a-phōn'-īc, a. [Fr. *cataphonique*; from Gr. *kata*=down, back, and *phōnē*=a voice.] Of, or relating to, cataphonics.

căt-a-phōn'-īcs, s. The doctrine or science of the reflection of sounds, a branch of acoustics.

Catamaran.

Catapetalous.

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camel, hēr, thēre; pīne, pīt, sīre, sīr, marine; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rūle, fūll; trỹ, Sýrian. æ, œ = ē; ey = ā. qu = kw.

ca-tăph-ô-ra, s. [Gr. *kata*=down, and *phero*=to bear.] A state of somnolency attended by short intervals of imperfect waking, sensation and speech.

căt-ă-phrăct, s. [Lat. *cataphractes*, from Gr. *kataphraktēs*=a fully-armed soldier, from *kata-phrassō*=to cover; *kata*=down, quite, *phrassō*=to inclose, to cover.]

***I. Ordinary Language:**

1. A horse-soldier in complete armor.

"... before him pipes
And timbrels; on each side went armed guards,
Both horse and foot; before him and behind,
Archers, and slingers, *cataphracts* and spears."
Milton: *Samson Agonistes*.

***2. Armor, defense. (Lit. & fig.)**

"In a battle we fight not but in complete armor. Virtue is a *cataphract*: for in vain we arm one limb, while the other is without defense."—Feltham: *Resolves*, ii. 8.

II. Technically:

1. Ichthy.: The armor or plate covering some fishes. (*Dana*.)

***2. Mil.:** A piece of ancient armor formed of cloth or leather, strengthened with iron scales or links, covering either a part or a whole of the body; and sometimes the warrior's horse as well.

Cataphract.

căt-ă-phrăc-tă, s. pl. [CATAPHRACT.]

Ichthy.: A name sometimes given to the Triglidae or Gurnard family of fishes. [TRIGLIDÆ.]

căt-ă-phrăc-tiēd, a. [Eng. *cataphract*; -ed.]

Zoöl.: Covered with a cataphract, or armor of plates, scales, &c., or with hard, bony, or horny skin.

căt-ă-phrăc-ti-ānș, s. pl. [In Lat. *cataphryges*, so named because Montanus and others of their leaders came originally from Phrygia.]

Ch. Hist.: A "heretical" sect which arose in the second century A.D. They are said to have followed the opinions of Montanus. If their accuser may be believed they forbade marriage, baptized their dead, and mingled the blood of young children with the bread and wine in the Eucharist. They were sometimes called simply Phrygians.

căt-ă-phyl-lar-ŷ, a. [From Gr. *kataphylltos*=leafy, and Eng. suff. -ary.] Inclosing true leaves.

¶ *Cataphyllary leaves:* Scale leaves. They are colorless, yellowish, reddish brown, or rarely green; often fleshy, leathery, or membranous, and for the most part buried in the ground. (*Thomé*.)

***căt-ă-phŷs-ŷc-āl**, a. [Gr. *kata*=down, against; and Eng. *physical* (q. v.).] Against nature; infra-natural.

"Falling under hyper-physical or cataphysical laws."—*De Quincey: Autob. Sketches*, I. 337.

căt-ă-plăsm (Eng.), **căt-ă-plăș-mă** (Lat.), s. [Fr. *cataplasme*; Lat. *cataplasma*; from Gr. *kata-plasma*, from *kataplassō*=to spread over; *kata*=down, *plassō*=to mold.]

Med.: A soft and moist preparation locally applied as a poultice. The basis is linseed meal, which is sometimes mixed with bread or flour. The most important Cataplasmata are: (1) *Cataplasma fermenti* (yeast poultice), (2) *Cataplasma lini* (linseed poultice), and (3) *Cataplasma sinapis* (mustard poultice). [POULTICE.]

"I bought an unction of a mountebank,
So mortal, that but dip a knife in it,
Where it draws blood, no cataplasma so rare,
Collected from all simples that have virtue
Under the moon, can save."
Shakesp.: *Hamlet*, iv. 7.

căt-ă-plēc-tic, a. [CATAPLEXY.] **Pathol.:** Of the nature of, or pertaining to, cataplexy; sudden and overwhelming.

căt-ă-plēi-ite, s. [In Ger. *katapleii*.]

Min.: A hexagonal, opaque mineral of a dull, weak, vitreous luster, and a light yellowish-brown color. It occurs in the island Lamsø, near Brevig, Norway. Hardness, nearly 6.0; specific gravity, 2.8. Composition: Silica, 46.83; zirconia, 29.81; alumina, 0.45; soda, 10.83; lime, 3.61; sesquioxide of iron, 3.63; water, 8.66. (*Dana*.)

căt-ă-plēx-ŷ, **căt-ă-plēx-ŷs**, s. [Gr. *kataplex*=stricken; *kata*=down, and *plēxō*=to strike.]

Pathol.:

1. Sudden prostration by a nervous shock, or by the onset of a disease.

2. Hypnosis.

căt-ăp-tō-sis, s. [Gr. *kata*=down, and *ptosis*=a falling.] Apoplexy.

căt-ă-pūlt (Eng.), **căt-ă-pūlt-ta** (Lat.), s. [Low Lat. *catapulta*; from Gr. *katapeltēs*=an engine of war for hurling heavy stones; *kata*=down, *pallō*=to brandish, to hurl.]

***1.** An ancient military engine for throwing arrows, darts, or stones, consisting of a strong wooden framework supporting a bow of wood or steel, which was bent by means of a windlass, the cord being finally released by a spring. It is said to have been invented in 399 B. C. by Dionysius, the tyrant of Syracuse.

"The Syrians invented the *catapult*."—*P. Holland: Plinie*, bk. vii., ch. lvi.

"The balista violently shot great stones and quarrels, as also the *catapults*."—*Camden: Remains*.

2. A toy made of a forked stick and a strong piece of india-rubber, used by boys for shooting small stones; a "grit-slinger," or "gravel-shooter."

Milton: *P. L.*, ii. 176.

2. Fig.: A great quantity, specially of a voluble flow of words.

"Cataracts of declamation thunder here."

Cowper: *Task*, iv. 73.

II. Technically:

1. Surg.: An affection of the sight, in which the crystalline lens of the eye is more or less permeated by opaque matter, and objective vision either wholly or partially prevented. Cataract is of two kinds, viz., hard and soft. Hard cataract is most common among old people. Soft may occur at any age, but is found most frequently among children, and especially among those who have been born with this condition; in the latter case it is called congenital cataract. Traumatic cataract is so called when it is the result of a wound of the lens. Cataract is very recognizable in children, in whom it presents a bluish-white appearance like milk and water in the pupil of the eye; in aged persons the color is much darker and less distinct, and therefore more difficult to see, but a careful examination will detect the opacity in the lens. Cataract is usually amenable to surgical treatment.

"Saladine hath a yellow milk, which hath likewise much acrimony; for it cleanseth the eyes: it is good also for cataracts."—*Bacon: Nat. Hist.*

2. Mech.: A kind of water-governor for regulating the action of an engine. (*Weale*.)

cătch, a. & s. [CATCH, v.]

A. As substantive:

I. Ordinary Language:

1. Literally:

(1) The act of seizing or grasping anything; a grasp.

"Taught by his open eye,
His eye, that ev'n did mark her trodden grass,
That she would fain the catch of Strephon fly."
Sidney: Arcadia.

(2) That by which anything is caught, held, or fastened. [II. 3.]

(3) The thing caught. [II. 4.]

2. Figuratively:

(6) A trap, a snare. (*Colloquial*.)

II. Technically:

1. **Music**: A part-song, also called a round (q. v.), where each singer in turn catches up, as it were, the words from his predecessor, the second singer beginning to sing the first line as soon as the first has finished it, the third beginning after the second has finished it, and so on. Originally the words were simple; subsequently it was contrived that by the singers catching at each other's words they should completely alter the meaning. Ludicrous effects were aimed at, and in the time of Charles II. most of the catches were indelicate. At present the difference between the catch and the round seems to be the humorous or fantastic character of the former.

"He joined in their ribald talk, sang catches with them, and, when his head grew hot, hugged and kissed them in an ecstasy of drunken fondness."—*Macaulay: Hist. Eng.*, ch. iv.

2. **Cricket, Baseball, &c.**: The act of seizing the ball after it has been struck by the batsman, and before it touches the ground; as, a good catch.

catchpole-ship, *s.* The office or position of a catchpole.

"This catchpoleship of Zacchæus carried extortion in the face."—*Bp. Hall: Works*, ii. 386.

cătch'-ŭp, **căt'-sŭp**, **kětch'-ŭp**, *s.* [Of doubtful origin, but probably East Indian.] A sauce originally made from mushrooms or walnuts, but the term has been extended to include condiments of a like nature using various substances as a base.

cătch'-ŷ, **cătch'-ie**, *a.* [Eng. *catch*; -y.]

1. Disposed to take the advantage of another. It is sometimes applied to language; but more commonly to conduct, as denoting one who is ready to circumvent.

2. Merry, playful.

3. Difficult, not easy to learn or to execute. (Colloquial.)

căt'-clăke, *s.* [From Eng. *cat*, and Scotch *cluk*=to catch as by a hook, or Eng. *clutch*. In Sw. *katt-klor*=the plant described below; from *katt*=cat, and *klor*=a claw. So named from the fanciful resemblance which the papilionaceous flowers have to a cat's claws.]

Bot.: A plant, the Bird's-foot Trefoil (*Lotus corniculatus*).

"In battil gers burgeouns, the banwart wyld,
The claur, catcluke, and the cammomyld." *Douglas: Virgil*, 401, 11.

cate, ***cait**, *v.* [Either from the name of the animal, or Sw. *kaat*=lascivious.] To desire the male or female. (A term used only of cats.)

***câte**, *s.* [Shortened from Mid. Eng. *acat*, *achat*; from O. Fr. *acat*; Fr. *achat*=a purchase; from Low Lat. *accaptatum*, from *accapto*=to purchase; *ad*=to, *capto*, frequent. form of *capio*=to take.] [ACATE.] A delicacy, food. (Seldom used except in the plural.)

" . . . even the Christmas-pie, which in its very nature is a kind of consecrated cate, and a badge of distinction, is often forbidden to the druid of the family."—*Tatler*, No. 255.

"The plenteous board high-heap'd with cates divine,
And o'er the foaming bowl the laughing wine!" *Pope: Homer's Odyssey*, bk. ix, 9, 10.

†căt-ě-chět'-ic, **căt-ě-chět'-i-cal**, ***căt-ě-chět'-ick**, *a.* [Gr. *katēchētēs*=an instructor; *katēcheō*=to din into one's ear, to instruct; *kata*=down, and *ēchē*=a sound, a ringing in the ear.] Consisting of question and answer, pertaining to the catechism.

"Socrates introduced a catechetical method of arguing; he would ask his adversary question upon question, till he convinced him, out of his own mouth, that his opinions were wrong."—*Addison: Spectator*.

" . . . the catechetical instruction of the youth of his parish."—*Fell: Life of Hammond*, § 1.

căt-ě-chět'-i-cal-lŷ, *adv.* [Eng. *catechetical*; -ly.] In a catechetical manner; by way of question and answer.

†căt-ě-chět'-ics, *s.* [CATECHETIC.] The science or practice of instructing catechetically, or by way of question and answer.

căt-ě-chŷne, *s.* [Eng. *catech(u)*, and suff. -ine (Chem.) (q. v.).]

Chem.: $C_9H_{10}O_4$. A weak acid extracted from catechu by hot water. It crystallizes in colorless needles. When heated it yields pyrocatechine, $C_6H_6O_2$. It gives a green color with ferric salts; does not form insoluble compounds with gelatine.

***căt-ě-chŷs**, *s.* [CATECHISM.]

"And of thir wellis of grace ye haue large declaratioun maid to yow in the third part of this catechis, quihilk intraittis of the seuin sacramentis."—*Abp. Hamilton: Catechism* (1551), fol. 79, b.

***căt-ě-chŷ-ŷa'-tion**, **căt-ě-chŷ-ză'-tion**, *s.* [Low Lat. *catechizatio*; from *catechizo*.] The act or practice of catechising.

" . . . the catechization of young chaplains in the rudiments of our faith, . . ."—*Burnet: Records*, pt. ii, bk. i., No. 53. *Oglethorpe's Submission*.

căt-ě-chŷe, **căt-ě-chŷe**, *v. t.* [From Low Lat. *catechizo*=to catechise; from Gr. *katēchō*=to din into one's ears; *kata*=down, and *ēchē*=a sound; *ēchos*=a ringing in one's ears.]

1. Lit.: To instruct by means of question and answer.

" . . . his memory was long cherished with exceeding love and reverence by those whom he had exhorted and catechised."—*Macaulay: Hist. Eng.*, ch. v.

2. Figuratively:

(1) To question closely, to examine.

"I'm stopp'd by all the fools I meet,
And catechis'd in ev'ry street."—*Swift*.

**2. To chastise, to reprove.*

"And as it were in catechising sort,
To make me mindful of my mortal sins." *Marlowe: Jew of Malta*, ii. 2.

***căt-ě-chŷe**, *s.* [CATECHISE, *v.*] A catechism.

"The Articles, Creeds, Homilies, Catechise and Liturgy."—*Gauden: Tears of the Church*, p. 55.

căt-ě-chŷed, **căt-ě-chŷed**, *pa. par. or a.* [CATECHISE, *v.*]

"This is an admirable way of teaching, wherein the catechised will at length find delight, and by which the catechiser, if he once get the skill of it, will draw out of ignorant and silly souls even the dark and deep points of religion."—*G. Herbert: Country Parson*, ch. xxi.

căt-ě-chŷ-ēr, **căt-ě-chŷ-zēr**, *s.* [Eng. *catechis(e)*; -er.] One who catechises.

"In 1550 he [Jewell] was admitted to the reading of the sentences, and during the reign of King Edward VI. became a zealous promoter of reformation and a preacher and catechiser at Sunningwell, near to Arlington, in Berks."—*Wood: Athene Oxon.* vol. i., p. 169.

căt-ě-chŷ-ing, **căt-ě-chŷ-ing**, *pr. par., a. & s.* [CATECHISE, *v.*]

A. & B. As pr. par. & particip. adj.: In senses corresponding to those of the verb.

C. As subst.: The act or process of instructing or examining by way of question and answer.

"O God, defend me! how am I beset!
What kind of catechising call you this?"

Shakesp.: Much Ado, iv. 1.

căt-ě-chŷm, *s.* [Low Lat. *catechismus*; from *catechizo*.] [CATECHISE.]

I. Ordinary Language:

1. Literally:

(1) A form of instruction, *vivâ voce*, by means of question and answer, especially in the principles of religion; the act of so instructing or being instructed.

" . . . for the first introduction of youth to the knowledge of God, the Jews even till this day have their catechisms."—*Hooker*.

(2) An elementary book in which the principles of religion are familiarly explained by way of question and answer.

"To say, ay, and no, to these particulars, is more than to answer in a catechism."—*Shakesp.: As You Like It*, iii. 2.

bôil, **bôy**; **pôut**, **jôwl**; **cat**, **çell**, **chorus**, **çhin**, **bençh**; **go**, **gem**; **thin**, **thiŷ**; **sin**, **aŷ**; **expect**, **Xenophon**, **exist**. **ph** = **f**.
-cian, -tian = **shan**. -tion, -sion = **shŷn**; -tŷion, -ŷion = **zhŷn**. -tious, -cious, -sious = **shŷs**. -ble, -dle, &c. = **bəl**, **dəl**.

(3) Any primer or elementary book of instruction in any branch of art or science by way of question and answer.

*2. *Fig.*: Anything which affords instruction.

"He had no *catechism* but the creation, needed no study but reflection, and read no book but the volume of the world."—*South*.

II. Ecclesiol. & Ch. Hist.: In the same sense as I. (2) (q. v.). The first germ whence the idea of a Christian "catechism," formally so called, grew, was furnished by St. Paul, when, in 1 Cor. xiv. 19, he said "*hina kai allous katēchēsō*." (Authorized Version), "that by my voice I might teach others also" (literally, might catechise others also). The first Christian catechisms are said to have been composed in the eighth or ninth century. Luther published a short catechism in 1520, and his larger and smaller ones in 1529. The Geneva Catechism was sent forth in 1536. The Church of England Catechism was first published in 1549 or 1551, but in a shorter form than now; the additions which enlarged it to its present dimensions being made by James I.'s bishops by his order in 1604, and the work issued in its complete form in 1612. The catechism of the "orthodox" Greek Church was published in 1542. In 1566 the Council of Trent produced a catechism, of course Roman Catholic in its teaching; the Rakovian Catechism, which is Socinian, was put forth in 1574, and the shorter and larger catechisms of the Westminster Assembly of Divines, now used in the Church of Scotland and other Presbyterian churches, appeared, the former in 1647, and the latter in 1648. Catechisms of other sects have been published, some of great literary merit, among others, a notable specimen being that of the M. E. Church.

cāt'-ē-chīst, s. [Gr. *katēchistēs*.] One who instructs others, *vivā voce*, by way of question and answer, in the rudiments of religious knowledge.

"None of years and knowledge was admitted, who had not been instructed by the *catechist* in this foundation, which the *catechist* received from the bishop."—*Hammond: Fundamentals*.

cāt'-ē-chīst'-tīc, cāt'-ē-chīst'-tī-cal, a. [Eng. *catechist*; -ic, -ical.] Of or pertaining to the office of a catechist, or to the act of instructing by way of question and answer.

"S. Cyril was the author of those *catechistical* sermons or institutions which are mentioned by S. Jerome."—*Bp. Cosin: Canon of Scripture*, § 58.

cāt'-ē-chīst'-tī-cal-lŷ, adv. [Eng. *catechistical*; -ly.] Catechetically; by way of question and answer.

"The principles of Christianity, briefly and *catechistically* taught them, is enough to save their souls."—*South: Sermon*, vii. 100.

cāt'-ē-chū, s. [Fr. *cachou*; Ger. *katchu*; Mod. Lat. *catechu*; from the Cochinchinese *caycau*.]

1. A gum furnished by the *Acacia catechu*. It is called also *Terra Japonica*. In the west of India it obtains the name of *Kutti*, and is collected by a tribe of people called Kuttoorees. (*Proceed. of Bomb. Geog. Society*, May, 1838.)

2. *Phar.*: *Catechu pallidum*, or Pale Catechu, is an extract from the leaves and young shoots of *Uncaria gambir*; it is prepared at Singapore. It occurs in cubical, yellowish-brown, porous pieces, with a dull, earthy fracture and a bitter, astringent taste; specific gravity, 1.4. It is soluble in alcohol. It consists chiefly of catechin, a white powder melting at 217°, formula $C_{20}H_{18}O_8$; and of catechu-tannic acid, a yellow porous substance, $C_{18}H_{18}O_3$. It is soluble in water; on exposure to the air the solution turns red. Catechu has been used to prevent the formation of boiler incrustations. Catechu is a very powerful astringent; it is used in diarrhoea and in cases of hæmorrhage and mucous discharge, especially in diseases of the urinary or procreative tract. It is chewed, and the juice gradually swallowed in relaxed conditions of the uvula, palate, &c.

"*Catechu*, absurdly called *Terra japonica*, . . . is prepared by boiling the slips of the interior of the wood in water, evaporating the solution to the consistence of syrup over the fire, and then exposing it to the sun to harden. It occurs in flat rough cakes, and under two forms. The first, or Bombay, is of uniform texture, and of specific gravity 1.39. The second is more friable and less solid. It has a chocolate color, and is marked inside with red streaks. Arca nuts are also found to contain *catechu*."—*Ure: Dictionary of Arts, Manufactures, and Mines*.

catechu-tannic, a. An expression used chiefly or exclusively in the subjoined compound.

Catechu-tannic acid: [CATECHU, Pharm.]

cāt'-ē-chū'-īc, a. [Catechu; -ic.] Of or pertaining to catechu.

catechuic acid, s. [CATECHINE.]

cāt'-ē-chū'-mēn, s. [Gr. *katēchoumenos* = one who is being instructed; from *katēcheō* = to din in;

kata = down, and *ēchē* = a noise, a din.] One who is still under instruction in the principles of the Christian religion; a neophyte.

"The prayers of the church did not begin in St. Austin's time, till the *catechumens* were dismissed."—*Stillingfleet*.

¶ In the first century, according to Mosheim, all who professed faith in Christ were immediately baptized; but in the second century the practice arose of requiring applicants for baptism to submit for a time to be instructed as catechumens before the initiatory rite was administered to them. While they continued in this preparatory state they were regarded as the lowest order of Christians. They were distinguished from the *fideles* (or faithful), not only by name, but also by their place in the church, where they sat in the gallery. They were not allowed to assist at the celebration of the Holy Communion, but were dismissed after the sermon with the words, "*Ite, catechumeni, missa est*" = "Go, catechumens; you are dismissed." Nor were they allowed to vote at meetings of the church. The instructions given them varied according to the mental capacity which they severally displayed.

cāt'-ē-chū'-mēn-āte, s. [Eng. *catechumen*; -ate.] The state or condition of a catechumen.

cāt'-ē-chū'-mēn'-ī-cal, a. [Eng. *catechumen*; -ical.] Of or pertaining to catechumens.

cāt'-ē-chū'-mēn'-ist, s. [Eng. *catechumen*; -ist.] A catechumen.

" . . . those *catechumenists* spoken of, . . ."—*Bishop Morton: Catholic Appeal*, p. 248.

***cat-e-cu-mel-yng, s.** [Eng. *catechume(n)*; dim. suff. -ling.] A young catechumen.

"To baptize barnes that ben *catecumelynges*."—*Langland: P. Plowman*, 6728.

cāt'-ē-gōr-ēm, s. [Gr. *katēgorēma*.] Categorematic word.

"Similarly, names are called categorematic words, or *categorems*, because they can be predicated independently of any other word. Some logicians would exclude adjective names from the class of *categorems*, and reduce the latter to substantive names only. . . . As a proof of this, they say that an adjective cannot stand as subject of a proposition unless accompanied by the definite article, and in the plural number."—*Shedden: Elements of Logic*, ch. ii.

cāt'-ē-gōr-ē-māt'-īc, a. [Gr. *katēgorēma* = a predicate.] [CATEGORY.]

Logic: Capable of being used as a term (used of a word).

†cāt'-ē-gōr-ē-māt'-ī-cal, a. [Eng. *categorematic*; -al.] The same as CATEGOREMATIC (q. v.).

"Can there possibly be two *categorematic*, that is, positive substantial infinities?"—*Jeremy Taylor: Real Presence*, sec. 11, § 14.

†cāt'-ē-gōr-ē-māt'-ī-cal-lŷ, adv. [Eng. *categorematic*; -ly.] In a categorematic manner.

"By this rule it is necessary (against Aristotle's great grounds) that some quantitative bodies should not be in a place, or else that quantitative bodies were *categorematically* infinite."—*Jeremy Taylor: Real Presence*, sec. 11, § 29.

cāt'-ē-gōr'-ī-cal, a. [Eng. *category* (y); -ical.]

1. Of or pertaining to a category.

"A single proposition, which is also *categorical*, may be divided again into simple and complex."—*Watts: Logic*.

2. Absolute, positive; not admitting of conditions or exceptions.

"They could never obtain a *categorical* answer."—*Clarendon*.

cāt'-ē-gōr'-ī-cal-lŷ, adv. [Eng. *categorical*; -ly.] In a categorical manner; absolutely, positively, expressly.

"I dare affirm, and that *categorically*, in all parts wherever trade is great, and continues so, that trade must be nationally profitable."—*Child: Discourse of Trade*.

cāt'-ē-gōr'-ī-cal-nēss, s. [Eng. *categorical*; -ness.] The quality of being categorical, or positive.

"The word of Mr. Bayes's that he has made notorious is *categoricalness* . . ."—*Marvell: Works*, vol. ii., p. 136.

cāt'-ē-gōr'-ize, v. t. [Eng. *category* (y); -ize.] To insert in a category or list; to class.

cāt'-ē-gōr'-ŷ, s. [Lat. *categoria*; Gr. *kategoria* = an accusation, a speech; *katēgorēō* = to accuse, to affirm, to predicate; *kata* = against, and *agoreuō* = to harangue, to assert; *agora* = an assembly.]

1. *Logic*: One of the predicaments or classes to which the objects of thought or knowledge can be reduced, and by which they can be arranged according to a system.

"The absolute infinitude, in a manner, quite changes the nature of beings, and exalts them into a different category."—*Cheyne*.

¶ Aristotle made ten categories, *viz.*, substance, quantity, quality, relation, action, passion, time, place, situation, and habit.

2. A condition, state, class or predicament.

"Twelve *categories* were framed, some of which were so extensive as to include tens of thousands of delinquents; and the House resolved that, under every one of these *categories*, some exceptions should be made."—*Macaulay: Hist. Eng.*, ch. xiv.

3. Used to denote a list or a class of persons accused.

"Thir noblemen and others should get no pardon, whether forfaulted or not—by and attour princes and noblemen in England set down in the same *category*."—*Spalding*, ii. 261.

***catel, s.** [CHATTLE.]

cāt'-ē-lēc'-trōde, s. [Gr. *kata* = down, against, and Eng. *electrode* (q. v.).]

Electro-chem.: The negative electrode or pole of a galvanic battery. [CATHODE.]

cāt'-ē-na, s. [Lat. *catena* = a chain.] A chain or series of things connected with each other.

" . . . an undoubtedly logical *catena* of proposals . . ."—*London Daily Telegraph*, March 14, 1877.

Catena di trilli: [Ital.]

Music: A chain, or succession, of short vocal or instrumental shakes. (*Stainer & Barrett*.)

catenæ patrum.

Ch. Hist.: Lit., chains of the Fathers. A series of extracts from commentaries by the Fathers on particular portions of Scripture. From about the sixth to at least the ninth century these almost wholly superseded personal effort on the part of professed expositors.

cāt'-ē-nār'-ī-an, a. [Lat. *catenarius* = of or belonging to a chain; *catena* = a chain.] Of the nature of or resembling a chain.

catenarian-arch, s.

Arch.: A form of arch, the reverse of the curve taken by a chain or heavy rope when suspended between two points. (*Cassell's Technical Educator*, vol. i., p. 197.)

catenarian-curve, s.

Geom.: A curve formed by a chain or rope of uniform density, hanging freely from any two points not in the same vertical line. It is of two kinds, the *common*, which is formed by a chain equally thick or equally heavy in all its points; or *uncommon*, formed by a thread unequally thick, that is, which in all its points is unequally heavy and in some ratio of the ordinates of a given curve. The catenarian curve, or catenary, was first observed by Galileo, who proposed it as the proper figure for an arch of equilibrium. He imagined it to be the same as the parabola. Its properties were first investigated by John Bernoulli, Huygens, and Leibnitz. It is now universally adopted in suspension-bridges. Each wire assumes its own catenary curve, and the cable is formed of bunches of aggregated strands.

"The back is bent after the manner of the *catenarian-curve*, by which it obtains that curvature that is safest for the included marrow."—*Cheyne: Philosoph. Prin.*

cāt'-ē-nār'-ŷ, a. & s. [Lat. *catenarius* = of or pertaining to a chain; *catena* = a chain.]

A. As adj.: Of the nature of or resembling a chain.

B. As subst.: A catenarian-curve (q. v.).

cāt'-ē-nāte, v. t. [Lat. *catenatus*, pa. par. of *cateno* = to connect by a chain; *catena* = a chain; O. H. Ger. *kétina*, *chétinna*; M. H. Ger. *kétenne*.] To connect by a chain; to join into a continuous series. (*Bailey*.)

***cāt'-ē-nā-tēd, pa. par. or a.** [CATENATE, v.] Connected by a chain; made into a series.

***cāt'-ē-nā-tiŋg, pr. par., a. & s.** [CATENATE, v.] **A. & B. As pr. par. & particip. adj.**: (See the verb.)

C. As subst.: The act of joining by a chain, or of forming into a continuous series.

cāt'-ē-nā-tion, s. [Lat. *catenatio*, from *cateno* = to chain; *catena* = a chain.] The act of joining into a continuous series; a regular or connected series.

"This *catenation*, or conserving union, whenever his pleasure shall divide, let go, or separate, they shall fall from their existence."—*Browne: Vulgar Errors*.

cāt'-ēn'-ū-lāte, a. [Lat. *catenula* = a little chain, dimin. of *catena* = a chain.]

***I. Ord. Lang.**: Consisting of little links, as in a chain.

II. Technically:

1. *Nat. Hist.*: Having on the surface a series of oblong tubercles resembling the links of a chain.

2. *Bot.*: Formed of parts united end to end like the links of a chain.

Catenarian Arch.

†II. *Fig.*: Liberal, not narrow-minded.

B. As substantive.

1. A member of the Christian Church.

2. Now generally applied to a member of the Roman Catholic branch of the Christian Church.

Catholic Church, s.

1. *Ecclesiol.*: (For definition see example.)

"The first and largest sense of the term *Catholic Church*, is that which appears to be the most obvious and literal meaning of the words in the text (Heb. xii. 23): 'The general assembly and church of the first-born which are written in heaven;' that is, the whole number of those who shall finally attain unto salvation. Secondly, The *Catholic* or *Universal Church*, signifies in the next place, and indeed more frequently, the Christian Church only: the Christian Church, as distinguished from that of the Jews and patriarchs of old; the Church of Christ spread universally from our Savior's days over all the world; in contradistinction to the Jewish Church, which was particularly confined to one nation or people. Thirdly, The *Catholic Church* signifies very frequently, in a still more particular and restrained sense, that part of the Universal Church of Christ, which in the present age is now living upon earth; as distinguished from those which have been before, and shall come after. Fourthly, and lastly, The term *Catholic Church* signifies in the last place, and most frequently of all, that part of the Universal Church of Christ, which in the present generation is visible upon earth, in an outward profession of the belief of the Gospels, and in a visible external communion of the word and sacraments. The Church of Rome pretends herself to be this Whole *Catholic Church*, exclusive of all other societies of Christians."—*Clarke*, vol. i., Ser. 62.

2. *Church History*:

(1) *Previous to the Reformation*: Like most other words used in ecclesiology, the term *Catholic* was borrowed at first from the New Testament. It occurs in some editions of the Greek original—including that issued in connection with the recent revision—in the titles prefixed to the Epistles of James, 1 & 2 Peter, 1 John, and Jude [CATHOLIC EPISTLES], and is the word translated "general" in the Authorized Version of the Bible. The first to apply it to the Church was the Apostolic Father Ignatius. When he and his successors used it they meant to indicate that the church of which they constituted a part comprised the main body of believers, and was designed, as it was entitled, to be universal. In this sense the Church was opposed to the sects and separate bodies of heretics who had separated themselves from it and were now outside its pale. This is the fourth sense given in the example under No. 1.

When, in the eighth century, the separation between the Eastern and Western Churches took place, the latter retained as one of its appellations the term "Catholic," the Eastern Church being contented with the word "Orthodox," still used by the Russian emperors in their politico-ecclesiastical manifestoes. [ORTHODOX.] The history of this earlier portion of the Catholic Church will be best treated of in the article *Christianity* (q. v.). (See also *Greek, Latin, Eastern, and Western*.)

(2) *Subsequently to the Reformation*: When the Protestant churches separated from their communion with Rome in the sixteenth century, those whom they had left naturally regarded them as outside the Catholic pale. They, on the other hand, declined to admit that this was the case, and the term "Catholic Church" is used in the English Liturgy apparently in the sense of all persons making a Christian profession. "More especially we pray Thee for the good estate of the Catholic Church . . . that all who profess and call themselves Christians . . ." (For the history of the Church of Rome, see ROMAN CATHOLICS.)

Catholic Emancipation Act:

căt'-tle, ***ca-tel**, s. & a. [A different form of the word *chattel*. In the pastoral age the wealth of any man of substance was naturally estimated by the number of cattle that he possessed. Hence the word *cattle* came to mean what we now should call a man's *chattels*; on the same principle as the Latin word *pecunia*=money, from *pecus*=cattle.]

A. As substantive:

I. Literally:

*1. Property, wealth, goods.

"A woman that hadde a flux of blood twelve year and hadde spended all hir oatel [Gr. *bion*=life, or living; Vulgate: *omnem substantiam suam*; Auth. Eng. Vers.: all her living] in leechis."—*Wycliffe: Luke* viii. 43, 44.

*2. Property consisting of live stock, as distinguished from goods.

"The first distinction made of live stock from other property was to call the former quick *cattle*."—*Sir J. Harrington: Epigrams*, i. 91. (*Trench: Select Glossary*, pp. 30, 31.)

¶ Afterward the word *chattel* was introduced for property without life.

*3. Beasts of pasture, not wild nor domestic.

¶ The word *cattle* is generally limited to the varieties of the ox and its congeners.

"And God made the beast of the earth after his kind, and *cattle* after their kind, and every thing that creepeth upon the earth after his kind."—*Gen.* i. 25.

II. Fig.: Used in a slighting sense of human beings.

cattle-plague, s.

1. *Gen.*: Any plague by which large numbers of cattle are destroyed. Such plagues have existed at intervals, more or less, in all countries and in all ages. Among the severer visitations in centuries preceding the nineteenth may be mentioned a great plague which arose in Hungary in 1711, whence it spread to other countries, destroying in the next three years about one and a half millions of cattle. A second visitation, which affected England and the West of Europe between 1745 and 1756, caused the death of about three millions of cattle.

2. *Spec.*: The name given in this country specifically to the disease known as "Texas fever," the scientific name of which is *pleuro-pneumonia*. Although this pest has from time to time broken out epidemically, there has never been any general epidemic here, such as has afflicted other countries. The appellation "cattle plague" is also loosely given to

another disease among cattle in this country, which is otherwise known as the "lumpy-jaw," a most virulent and incurable affection. Experiments have been time and again ineffectually tried to find a cure for this, although large governmental encouragement has been offered. A plague broke out in 1865 in a dairy at Barnsbury, near London, England, and spread rapidly through the country, reappearing more than once after being "stamped out." By a return to the Privy Council it appears that no fewer than 248,965 cattle had been attacked, of which 124,187 had died of the disease, 80,597 had been slaughtered, 32,989 had recovered, and 11,192 had not been properly reported on. [FOOT-AND-MOUTH DISEASE, PLEURO-PNEUMONIA.]

cattle-pump, s. A pump which is operated by the cattle coming to drink, either by their weight upon a platform or by pressing against a bar which gives way before them, they following it around in a circular track and operating the piston. (*Knight*.)

cattle-range, s. Any open space over which cattle may range or feed.

cattle-stall, s. A means for fastening cattle at their mangers or racks other than by halter or tie. It usually consists of a pair of parallel vertical stanchions, at such distance apart as to admit the neck of the animal. One stanchion is movable to allow the head of the animal to pass, and is then replaced and held by a latch or pin. (*Knight*.)

căt'-lě-ÿa, s. [Named by Lindley after William Cattley, Esq.]

câu'-cũs, s. [A corruption of *calker's-house*=a calker's shed. (*Chambers' Encyc.*, i. 206.) On March 2, 1770, a quarrel occurred in Boston between

the soldiers and some ropemakers, in which the latter were overpowered and beaten. The people were greatly exasperated at this, and sought opportunities for retaliation. On the 5th of the same month, in a similar affray, the soldiers fired upon the people of the town, killing and wounding several. This induced the ropemakers and calkers, whose occupations, brought them into contact, to form a society, at the meetings of which inflammatory addresses were delivered, and the most violent resolutions passed against the British government and its agents and instruments in America. The Tories in derision called these assemblies calkers' meetings, and the term was at length corrupted to *caucus*.] A private meeting of the representatives of any political party previous to an election, for the purpose of selecting candidates and making other arrangements for the promotion of party interests; or a private meeting of senators or congressmen or legislators for conference during the progress of legislation.

câu'-dal, a. [Lat. *cauda*=a tail.] Pertaining to or of the nature of a tail; tail-like.

¶ *Gram.*: Applied to certain changes of form whereby neuter verbs become transitive (thus *raise*, *make* or *cause* to *rise*), also to the class constituted by such change.

"Let any Hebrew reader judge whether *pihel* can properly be said, in general, to augment the signification, or *hiphel* to be *causative*."—*Student*, ii. 308.

câus'-a-tive-ly, *adv.* [Eng. *causative*; -*ly*.] In a causative manner.

"Several conjugations are used very indiscriminately; and whether they are to be taken actively, passively, *causatively*, or absolutely, must be determined by the context."—*Student*, ii. 308.

câu-șă-tôr, *s.* [Low Lat. *causator*, from *causo* = to *cause*.] He who or that which causes or produces an effect or result.

"Demonstratively understanding the simplicity of perfection, and the invisible condition of the first *causator*, it was out of the power of earth, or the areopagus of hell, to work them from it."—*Broune: Vulgar Errors*.

câuse, *s.* [O. Fr. *cause*; Ital. & Sp. *causa*, from Lat. *causa*.]

I. Ordinary Language:

1. That which produces, effects anything; that from which anything proceeds or arises, the relative to effect.

"Cause is a substance exerting its power [into act, to make one thing begin to be]."—*Locke*.

"Remember, Man, 'the Universal Cause Acts not by partial, but by gen'ral laws,'"—*Pope: Essay on Man*, Ep. iv., l. 35-6.

2. A reason; ground or motive of action. [BE-CAUSE.]

"They begynne to declare the *cause* of her comynge."—*Deposit. of Richard II.*, p. 28.

"... fought against me without a *cause*."—*Psalms* xix. 3.

*3. Sake, interest, advantage.

"I did it not for his *cause*."—2 Cor. vii. 12.

4. A side or party in a dispute or controversy; a principle.

"The ryght of hys *cause*."—*Robert of Gloucester*, p. 456.

"The minority in both Houses, it was said, would be true to the cause of hereditary monarchy."—*Macaulay: Hist. Eng.*, ch. xi.

†5. A matter in dispute; a question.

"The *cause* was ihanded and itreted bytwene the forsaide primates."—*Trevisa*, ii. 141.

"O madness of discourse,

That *cause* sets up with and against thyself!"

Shakesp.: Troilus, v. 2.

*6. An accusation, an indictment, a charge.

II. *Law*: A suit, an action, ground of action.

"To corte quen thou schal com

Ther alle oure *causez* schal be tryed."

Ear. Eng. Allit. Poems (ed. Morris); *Pearl*, 700.

"Hear the *causes* between your brethren, . . ."—*Deut.* i. 16.

III. Special phrases:

1. *Cause of action* (*Law*): A right to sue. (*Wharton*.)

2. *Material cause*: That of which anything is made.

3. *Final cause*: The motive inducing an agent to act; the object or purpose for which a thing is done or made.

4. *Efficient cause*: The agent effecting or producing a result.

5. *Formal cause*: The elements of a conception which make a conception or the thing conceived to be what it is, or the idea viewed as a formative principle and co-operating with the matter.

6. *To make common cause with*: To join in aims or objects with another; to side with and support one.

"Thus the most respectable Protestants, with Elizabeth at their head, were forced to *make common cause* with the Papists."—*Macaulay: Hist. Eng.*, ch. ii.

¶ (1) Crabb thus distinguishes between *cause*, *reason*, and *motive*: "*Cause* respects the order and connection of things; *reason* the movements and operations of the mind; *motives* the movements of the mind and body. *Cause* is properly generic, *reason* and *motive* are specific; every *reason* or *motive* is a *cause*, but every *cause* is not a *reason* or *motive*. *Cause* is said of all inanimate objects; *reason* and *motive* of rational agents. Whatever happens in the world happens from some *cause*, mediate or immediate; the primary or first *cause* of all is God. Whatever opinions men hold they ought to be able to assign a substantial *reason* for them, and for whatever they do they ought to have a sufficient *motive*. As the *cause* gives birth to the effect, so does the *reason* give birth to the conclusion, and the *motive* gives birth to the action." (*Crabb: Eng. Synon.*)

(2) For the difference between *cause*, *s.*, and *case*, *s.*, see *CASE*, *s.*

cause-list, *s.*

Law: A printed roll of actions to be tried in the order in which they are entered, and with the name of the attorneys engaged for each litigant.

câuse, *v. t. & i.* [CAUSE, *s.*]

A. Transitive:

1. To act as an agent in producing, to effect, to bring into existence.

"He apologized to those who had stood round him all night for the trouble which he had *caused*."—*Macaulay: Hist. Eng.*, ch. iv.

2. To produce an effect, to make (with an infinitive following).

"Wilt thou judge them, son of man, wilt thou judge them? *cause* them to know the abominations of their fathers."—*Ezek.* xx. 4.

*B. Intrans.: To show cause or reason.

"But he, to shifte their curious request,

Gan *causen* why she could not come in place."

Spenser: F. Q., III. ix. 26.

¶ Crabb thus discriminates between *to cause*, *to occasion*, and *to create*: "What is *caused* seems to follow naturally; what is *occasioned* follows incidentally; what is *created* receives its existence arbitrarily. A wound *causes* pain, accidents *occasion* delay, but bodies *create* mischief. The misfortunes of the children *cause* great affliction to the parents; business *occasions* a person's late attendance at a place; disputes and misunderstandings *create* animosity and ill-will." (*Crabb: Eng. Synon.*)

câused, *pa. par. or a.* [CAUSE, *v.*]

câus'-tic, ***câus'-tick**, **câus'-tî-cal**, *a. & s.* [Lat. *causticus*; Gr. *kaustikos* = burning; *kaiō*, future *kausō* = to burn.]

A. As adjective (of all the forms):

1. *Lit.*: Burning hot, corrosive. Applied to a medicine or substance which destroys the tissue of the animal parts to which it is applied, changing it into a substance like burnt flesh, which in a little time, with detergent dressing, falls off, and leaves a vacancy in the part.

"Air too hot, cold, and moist, abounding perhaps with *caustic*, astringent, and coagulating particles."—*Arbuthnot*.

"If extirpation be safe the best way will be by *caustical* medicines or escharotics."—*Wiseman: Surgery*.

2. *Fig.*: Sharp, bitter, cutting. Applied to language full of bitter satire or sarcasm.

"... and mirth he has a particular knack in extracting from his guests, let their humor be never so *caustic* or refractory."—*Smollett: Expedition of Humphry Clinker*.

B. As substantive (of the first two forms only):

1. *Med.*: Any substance which, on being applied to the flesh, destroys the animal tissue. Specially, a term applied to *Nitras argenti*, or nitrate of silver, commonly called Lunar Caustic, which is stimulant and sedative in its action rather than destructive, except on the mere surface to which it is directly applied. The stronger caustics produce an eschar, and are therefore called escharotics. They act either by their intense affinity for water, or by forming compounds with the albuminous substances, as sulphuric acid, caustic potash, bromine, chromic acid, arsenic, nitric acid, hydrochloric acid, carbonic acid, glacial acetic acid, chloride of zinc, chloride of antimony, nitrate of silver, red oxide of mercury, sulphate of copper. Caustics are employed (1) To destroy poisonous bites of serpents, rabid animals, syphilis; (2) To remove exuberant and morbid growths, as excessive granulations, polypi, cancerous deposits, warts, and to improve the character of ulcerated surfaces; (3) To act on healthy skin, so as to form issues, and to open abscesses.

"... retired to his own lodgings, where he applied *caustic* to the wart."—*Smollett: Expedition of Humphry Clinker*.

2. *Optics*: A caustic curve.

"No marvel though cantharides have such a corrosive and cauterizing quality . . ."—*Bacon: Natural and Experimental History*.

C. As substantive:

1. *Lit.*: The act of burning with caustic.

2. *Fig.*: A burning to the heart.

"For each true word a blister! and each false
Be as a caut'izing to the root of the tongue,
Consuming it with speaking."

Shakesp.: Timon of Athens, v. 2.

¶ The first folio reads *cautherizing*.

câu-těr-ý, s. [Gr. *kautērion*=a branding-iron, from *kaiō*=to burn, to brand.]

1. An instrument for burning or searing the flesh, either with a hot iron, or with caustic medicines.

"In heat of fight it will be necessary to have your actual cautery always ready, . . ."—*Wiseman: Surgery*.

2. The act of cauterizing.

"Cautery is either actual or potential; the first is burning by a hot iron, and the latter with caustic medicines. The actual cautery is generally used to stop mortification, by burning the dead parts to the quick, or to stop the effusion of blood, by searing up the vessels."—*Quincy*.

câu-thěe, s. [A word from one of the Hindoo languages.]

3. Provision or security against danger, &c.; prudence, wariness, provident care and heedfulness.

"In despite of all the rules and cautions of government . . ."—*L'Estrange*.

"Schomberg and some other officers recommended caution and delay."—*Macaulay: Hist. Eng.*, ch. xvi.

4. A warning, advice to be careful and provident.

"Indulge, my son, the cautions of the wise."

Pope: Homer's Odyssey, bk. xxiii. 114.

¶ Crabb thus discriminates between an *admonition*, a *warning*, and a *caution*: "An *admonition* respects the moral conduct; it comprehends reasoning and remonstrance. *Warning* and *caution* respect the personal interest or safety in. We *admonish* a person against the commission of any offense; we *warn* him against any danger; we *caution* him against any misfortune." (*Crabb: Eng. Synon.*)

Law:

Cautiopro expensis: Security for costs or expenses. In nearly all the countries of Europe, an alien plaintiff, whether resident there or not, is required to give caution *pro expensis*; that is, security for costs. In some of the states of this country, when such plaintiff has real estate, or a commercial or manufacturing establishment within the state, he is not required to give such caution.

caution-money, s. A sum of money deposited by a person as security, as by a student on his matriculation at the English Universities.

Slow stalks the slave, whose office there to wait, . . ."

Byron: The Corsair, ii. 3.

¶ With of before the person or thing to be guarded against.

"Be cautious of him, for he is sometimes an inconstant lover, because he hath a great advantage."—*Swift*.

¶ (1) Crabb thus discriminates between *cautious*, *wary*, and *circumspect*: "These epithets denote a particular care to avoid evil; but *cautious* expresses less than the other two; it is necessary to be *cautious* at all times; to be *wary* in cases of peculiar danger; to be *circumspect* in matters of peculiar delicacy and difficulty. . . . A tradesman must be *cautious* in his dealings with all men; he must be *wary* in his intercourse with designing men; he must be *circumspect* when transacting business of particular importance and intricacy." (*Crabb: Eng. Synon.*)

(2) For the difference between *careful*, *cautious*, and *provident*, see CAREFUL.

câu-tious-lý, adv. [Eng. *cautious*; -ly.] In a cautious manner, warily, heedfully.

"This well employed, he purchased friends and fame,
But cautiously concealed from whence it came."

Dryden: The Fables; Palamon and Arcite, bk. i.

†cāv'-al-ēr'-ō, cāv'-a-liēr'-ō, *s.* [CAVALIER.] A quasi-Spanish form of the word *cavalier*, used generally with somewhat of a burlesque meaning.

"Nothing, good monsieur, but to help *cavalero* Cobweb go scratch."—*Shakesp.: Mid. Night's Dream*, iv. 1.

cavalero-justice, *s.*

"How now, bully-look? thou'rt a gentleman; *cavalero-justice*, I say."—*Shakesp.: Mer. Wives of Windsor*, ii. 1.

cāv'-a-liēr', *s. & a.* [Fr. *cavalier*; Ital. *cavaliere*; Sp. *caballero*; all from Low Lat. *caballarius*=a horseman, from *caballus*=a horse.] [CAPLE.]

A. As substantive:

I. Ordinary Language:

1. *Generally:*

(1) A knight, a horseman.

"Now joy to the crest of the brave *Cavalier*!
Be his banner unconquered, resistless his spear."
Scott: Rokeby, v. 20.

(2) A gallant.

"For who is he, whose chin is but enrich'd
With one appearing hair, that will not follow
These cull'd and choice drawn *cavaliers* to France?"
Shakesp.: Hen. V., iii. Prologue.

2. *Spec.*: Applied to themselves by the royalist party in the civil war under Charles I.

"During some years they were designated as *Cavaliers* and Roundheads. They were subsequently called Tories and Whigs; nor does it seem that these appellations are likely soon to become obsolete."—*Macaulay: Hist. Eng.*, ch. i.

*II. *Fortif.*: A work situated behind another, over which it has a command of fire.

"Our casemates, *cavaliers*, and counterscarps,
Are well survey'd by all our engineers."
Heywood: Four P's.

*cāv'-a-liēr'-nēss, *s.* [Eng. *cavalier*; -ness.] Arrogance, haughtiness.

*cāv'-a-li-ēr'-ō, *s.* [Ital.] A cavalier.

"In short he was a perfect *cavaliero*,
And to his very valet seem'd a hero."
Byron: Beppo, v. 33.

cāv'-a-lot, *s.* [Fr. *cavalot*.]

Mil.: An ancient cannon five feet long, throwing a 1-lb. ball, with a charge of 1 lb.; range, 900 paces.

cāv'-al-rŷ, *cāv'-āl-lēr'-ie, *s.* [O. Fr. *chevalerie*; Fr. *cavalerie*; Sp. *caballeria*; Ital. & Port. *cavalleria*.] [CAVALIER.]

Mounted soldiery: That part of a military force that serves on horseback.

¶ The cavalry of the United States army consists of ten regiments, each containing twelve companies or troops. They are really intended (in addition to forming a nucleus for organization in case of war) to act as mounted police, and while they are thoroughly drilled in modern military evolutions for their particular branch of the service, they are at the same time assimilated as closely to the infantry as possible, and are trained to maneuver either as mounted cavalry or as foot soldiers. They are armed with swords and with breech-loading (generally repeating) rifles. Of the ten regiments two are composed of negroes, commanded by white commissioned officers. They are chiefly stationed in the west, garrisoning the forts and stations designed to hold the Indians in check.

Originally *cavalry* and *chivalry* were but two different ways of spelling the same word. (*Trench: Eng. Past and Present*, p. 65.)

*cā-vāte', *v. t.* [Lat. *cavatus*, pa. par. of *cavo*=to hollow out.] To hollow or dig out; now superseded by *excavate* (q. v.). (*Bailey.*)

cāv'-a-tin'-a, *s.* [Ital.] A melody of a more simple form than the aria. A song without a second part and a *da capo*. (*Stainer & Barrett.*)

*cāv'-āt-īng, *pr. par., a. & s.* [CAVATE, *v.*]

A. & B. *As pr. par. & partic. adj.*: (See the verb.)

C. *As subst.*: The act of hollowing out or excavating.

*cāv'-ā-tion, *cāv'-ā'-zion, *s.* [Low Lat. *cavatio*=a hollowing or excavating; *cavo*=to hollow out, to excavate.]

Arch.: The hollowing or underdigging of the earth for cellars or foundations; according to Vitruvius it should be the sixth part of the height of the whole building.

cāve (1), *kāve, *s. & a.* [Fr. *cave*; Sp. & Ital. *cava*=a hollow place; from Lat. *cavea*, from *carus*=hollow.]

A. As substantive:

I. Ordinary Language:

1. A hollow place or cavern under the earth; a subterranean habitation.

"Thor he bigged in a *cave*, the was thor in roche graven."
Story of Gen. and Exod., 1, 137.

"Thou magic lyre, whose fascinating sound
Seduced the savage monsters from their *cave*."
Cowper: Ode on the Marriage of a Friend.

*2. Any hollow place or part.

"The object of sight doth strike upon the pupil of the eye directly, whereas the *cave* of the ear doth hold off the sound a little."—*Bacon: Natural History.*

II. Technically:

1. *Geol.*: Caves in many cases are scooped out by the sea or by the action of inland streams. They are most numerous in limestone countries, and are of great interest geologically. [CAVE-DEPOSITS.]

2. *Glass Manufacture*: The ash-pit of a glass furnace.

B. As adj.: (See the compounds.)

¶ Obvious compound: *Cave-keeper*.

¶ The best known American cave is the Mammoth Cave, in Edmonson County, Kentucky. It is near Green River, about six miles from Cave City, and twenty-eight miles from Bowling Green. The cave consists of a succession of irregular chambers, some of which are large, situated on different levels. Some of these are traversed by the navigable branches of the subterranean Echo River. Blind fish are found in its waters. Another prominent candidate for public notice is the Luray Cave, situated near the Village of Luray, in Page County, Virginia. This latter has been said by some to surpass the Mammoth Cave in almost every particular.

cave-bear, *s.*

Palæont.: *Ursus spelæus*, a fossil bear, more gigantic than any now known to exist. It is found in Post-Pliocene cave-deposits.

cave-breccia, *s.*

Geol.: A breccia, generally of marine origin, frequently met with in caverns at the base of sea-cliffs. It often contains organic remains. [CAVE-DEPOSITS.]

cave-deposits, *s. pl.*

Geol.: Deposits made in sea-caves. Water washed in some of the materials which were afterward fixed in their place by the formation of stalactite pendulous from the roof, and stalagmite rising in irregular columns from the floor. According to the celebrated chemist Liebig, the vegetable soil above the limestone rock, when acted on by moisture and air, evolves carbonic acid (carbon dioxide). Falling rain, becoming impregnated with this chemical compound, is capable of dissolving the limestone, and subsequently losing by evaporation a portion of the carbonic acid, parts with the calcareous matter, which it leaves in the form of stalactite. The dropping of water impregnated with carbonate of lime from the tips of the pendulous stalactites, generates the stalagmites, and hermetically seals the aqueous deposits beneath for geological examination. It is remarkable that, tested by these organic remains, caverns do not, as might be anticipated, range over a succession of formations; they seem to be all but limited to the Newer-Pliocene and Post-Pliocene periods.

cave-dwellers, *s. pl.* A name given to the prehistoric people who dwelt in caves. [TROGLODYTE.]

cave-earth, *s.*

Geol.: A stratum of earth constituting the old floor of a cave, previous to the deposition of the stalagmite by which, as a rule, it is now covered.

cave-guarded, *a.* Guarded or protected in a cave.

cave-hyena, cave-hyæna, *s.*

Palæont.: *Hyæna spelæa*, a fossil, a hyena akin to *H. crocuta* of South Africa, of which it may be only a variety.

"The *cave-hyena* and *cave-tiger* are found associated with the *Ursus spelæus* in the caverns."—*Lubbock: Prehistoric Times*, p. 238.

cave-keeping, *a. Secret, retired from sight, as though hidden in a cave.

"In men, as in a rough-grown grove, remain
Cave-keeping evils that obscurely sleep."
Shakesp.: Lucrece, 1249-51.

cave-lion, *s.*

Palæont.: A fossil lion, *Felis spelæa*, akin to if not even identical with the *F. leo* of modern times.

cave-pika, *s.*

Palæont.: A fossil species of *Lagomys* found in Post-Pliocene deposits in Europe.

cave-rat, *s.* A species of rat living underground.

cāve (2), *s.* [Icel. *akafr*=with force.]

There where the moldred earth had *cav'd* the banke."
Spenser: F. Q., IV. v. 33.

2. *Tech.*: To separate grain from the broken straw.

"I *cave* corne. J'escouse le grain."—*Palsgrave*.

B. Intransitive:

*1. To dwell in a cave.

"It may be heard at court, that such as we
Cave here, hunt here, are outlaws, . . ."
Shakesp.: Cymbeline, iv. 2.

†2. To sink or fall down, to give way.

¶ To *cave in*: To give way, to yield. (*Slang.*)

"A puppy . . . joins the chase with heart and soul,
but *caves in* at about fifty yards."—*H. Kingsley: Geoffrey Hamlyn*, ch. xxviii.

To *cave over*: To fall over suddenly. (*Scotch.*)

"Sitting down [on] a bedside, he *caves back over* so that his feet stack out stiff and dead."—*Melville: MS.*, p. 32.

To *cave the head*: To toss it in a haughty or awkward way.

"Up starts a priest, and his hug head claws,
Whose conscience was but yet in dead thraws,
And did not cease to *cave*, and paut,
While clyred back was prickt and gald."
Cleland: Poems, p. 66.

cāve (2), *v. t.* [CA'.] To drive backward and forward; to toss.

cāv'-ē-āt, *s.* [Lat. *caveat*=let him beware, 3d per. sing. pr. subj. of *caveo*=to beware.]

I. Technically:

1. *Law*: A notice or warning given by any person interested to some public officer not to do a certain act until the party giving the notice has been heard in opposition.

"A *caveat* is an intimation given to some ordinary or ecclesiastical judge by the act of man, notifying to him, that he ought to beware how he acts in such or such an affair."—*Ayliffe*.

2. *Patent Laws*: A description of some invention designed to be patented, lodged in the office before the patent right is taken out, operating as a bar to applications respecting the same invention from any other quarter.

II. Ord Lang. (fig.): A warning, a caution, a protest.

"As, however, there is scarcely any one of the principles of a true method of philosophizing which does not require to be guarded against errors on both sides, I must enter a *caveat* against another misapprehension, of a kind directly contrary to the preceding."—*J. S. Mill: System of Logic*, § 3.

Caveat emptor (Lat.): Let the purchaser beware, i. e., let him examine what he is buying before he completes the bargain; in other words, the risk of the purchase lies with the purchaser.

cēase, ***cessen**, ***cesen**, ***ceesen**, ***ceçyn**, ***sesse**, ***seasse**, *v. i. & t.* [O. Fr. *cesser*; Sp. *cesar*; It. *cessare*, from Lat. *cesso*=to go slowly, cease, frequent. of *cedo*=to give way, yield.]

I. *Intransitive*:

1. To come to an end, leave off, give over, desist. (1) *Absolutely*:

"Cecyn. Cesso."—*Prompt. Parv.*

"We shalle not seasse, but ding all downe."—*Townley: Mysteries*, p. 65.

(2) *With an infinitive following*:

"The stream will cease to flow."
Tennyson: All Things will Die.

(3) *With the preposition from*:

"The lives of all who cease from combat, spare."
Dryden.

2. To be at an end, to exist no longer.

"All charite shal cease among the men."
Gower, i. 38.

*3. To become extinct, to pass away.

"The inhabitants of the villages ceased, they ceased in Israel. . . ."—*Judges* v. 7.

4. To rest, leave off for a time, desist from

" . . . without ceasing I have remembrance of thee in my prayers night and day."—*2 Tim.* i. 3.

II. *Trans.*: To put a stop to, to end.

"But he, her fears to cease,
Sent down the meek-eyed peace."
Milton: Nativity, 45.

¶ Crabb thus discriminates between *to cease*, *leave off*, and *discontinue*: "*To cease* is neuter; *to leave off* and *discontinue* are active; we *cease* from doing a thing; we *leave off* or *discontinue* a thing.

Cease is used either for particular actions or general habits; *leave off* more usually and properly for particular actions; *discontinue* for general habits. A restless spoiled child never *ceases* crying until it has obtained what it wants; it is a mark of impatience not to *cease* lamenting when one is in pain. A laborer *leaves off* his work at any given hour. A delicate person *discontinues* his visits when they are found not to be agreeable. It should be our first endeavor to *cease* to do evil. It is never good to *leave off* working while there is anything to do, and time to do it in. The *discontinuing* a good practice without adequate grounds evinces great instability of character." (*Crabb: Eng. Synon.*)

***cēase**, *s.* [CEASE, *v.*] The end, extinction or failure.

"The cease of majesty
Dies not alone; but, like a gulf, doth draw
What's near it with it."
Shakspeare: Hamlet, iii. 3.

ceased, *pa. par. & a.* [CEASE.]

cēase'-less, *a.* [Eng. *cease*; *-less*.] Incessant, unceasing, unending.

A. & B. *As pr. par. & particip. adj.*: (See the verb.)

C. *As subst.*: The act of leaving off, or desisting from anything; a stoppage.

" . . . he did not mean by abrogation a *ceasing*, but an alteration and abatement."—*Warburton: Remarks on Ocas. Reflect.*, pt. ii.

čēa'-sūre, *s.* [CÆSURA.] The rhythm of verse.

"Divine du Bartas, hid his heavenly *ceasures*,
Singing the mighty world's immortal story?"
Sylvester: Du Bartas.

čēb-a-dīl'-lā, *s.* [CEVADILLA.]

***če-bell**, *s.* [Etymology doubtful.]

Music: The name of an air or theme in common time of four bar phrases, forming a subject upon which to execute "divisions" upon the lute or violin. This style of air, although frequently found in books for the violin in the 17th century, is now obsolete; its principal feature was the alternation of grave and acute notes which formed the several strains. (*Stainer & Barrett*.)

cē-čīd-ō-mỹ'-ī-a, *s.* [From Gr. *kēkis*, genit. *kēkidos*= . . . a gall-nut, and *myia*=a fly.]

Entom.: A genus of two-winged flies, Diptera, of the family Tipulidæ, having the wings resting horizontally with three longitudinal nervures; head hemispherical; antennæ as long as the body, and generally 24-jointed, the joints hairy (in females 14-jointed); the two basal joints short, legs long;

fāte, fāt, fāre, amidst, whāt, fāl, father; wē, wēt, hēre, camēl, hēr, thēre; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unīte, cūr, rūle, fūll; trỹ, Sýrian. æ, œ = ē; ey = ā. qu = kw.

basal joint of tarsi very short, second long. Stephens enumerates twenty-six species, all of which are of small size. *Cecidomyia tritici*, the Wheat-fly, is well known from its attacks on wheat.

çē-çil'-i-anş, s. [Fr. *cécilies*, from Lat. *cæcilia* = a slow-worm or blind-worm; *cæcus*=blind.]

Zoöl.: A family and genus of naked vertebrates, placed by Linnaeus and Cuvier among serpents, but now known to be amphibians. The eyes are exceedingly small, whence the name given to them; the skin is smooth, viscous and striated, with annular folds. It is not properly naked, but the scales are very minute and indistinct. All the species are natives of warm climates. [CÆCILIADÆ.]

***çē-çī-tŷ**, s. [Fr. *cécité*; Lat. *cæcitas*=blindness; *cæcus*=blind.] Blindness.

"They are not blind, nor yet distinctly see; there is in them no *cecuty*, yet more than a *cecutenoy*; . . ."—Browne: *Vulgar Errors*.

çē-crōp'-i-a, s. [Named after Cecrops, a fabulous king of Athens.]

Bot.: A genus of large-leaved, soft-wooded milky trees, natives of tropical South America, and belonging to the order of Artocarpads. More than twenty-five species are known. *C. peltata*, the Trumpet-tree of the West Indies, is so called from its hollow branches being used for musical instruments, especially a species of drum called by the native Indians Amboobas. It grows very rapidly and attains a height of upward of fifty feet. The wood is very light, and is commonly used in the West Indies for making floats for fishing-nets.

çē-crōps, s. [The fabulous first king of Athens.] **Zoöl.**: A genus of Crustacea, of the order Siphonostoma, and family Caligina or Caligidæ.

***çē-cū-ti-en-çŷ**, s. [Lat. *cæcutiens*, pr. par. of *cæcutio*=to be blind; *cæcus*=blind.] A partial blindness; a tendency to blindness. (See instance under *Cecity*.)

çē-dar, ***çē-dir**, ***ce-dre**, ***sē-dyr**, s. & a. [A.S. *ceder-beām*, *ceder-treow*; Sw. *ceder*, *ceder-träo*; Dan. *ceder trä*; Dut. *ceder boom*; Ger. *ceder*; Gael. *seudar*; Wel. *cedr*; Fr. *cedre*; Prov. *cedre*, *sedre*; Sp. & Port. *cedro*; Ital. *cedra*; Lat. *cedrus*; Gr. *kedros*=(1) the cedar of Lebanon, (2) a kind of juniper.]

A. As substantive:

I. Scrip. & Bot.: A tree or trees called in Heb. *erez*, from *araz*, the root of *aruz*=coiled, compressed. In Sept. Gr. it is *kedros*. *Erez* still continues in the Arab. *arz*, and seems to be a generic word, almost like the English *cedar*, but limited apparently to species of the pine family, of which several are on Mount Lebanon, the three most notable being "the cedar of Lebanon," pre-eminently so called [II. 1], the Deodar [II. 1, and Deodar], and the Scotch fir (*Pinus sylvestris*). The masts for ships spoken of in Ezek. xxvii.5 were probably from the Scotch fir; while the tree, of which it is said that "his boughs were multiplied and his branches became long," is plainly the typical "Cedar of Lebanon." The wood of that species is soft, and not specially valuable; and, contrary to the received opinion, the *erez* which furnished the beams, &c., of Solomon's temple, may have been from another species of Lebanon pine.

II. Ord. Lang. & Bot.: The English name given to various trees, chiefly of the orders Pinacæ (Conifers) and Cedrelacæ (Cedrelads).

1. (Of the order Pinacæ):

(1) The Cedar of Lebanon (*Abies cedrus*, often called *Cedrus Libani*). From the allusion to it in Scripture it has, for many centuries, been an object of interest, and more than one hundred years ago Miller thus described it: "It is evergreen; the leaves are much narrower than those of the pine-tree, and many of them produced out of one tubercle, resembling a painter's pencil; it has male flowers, or katkins, produced at remote distances from the fruit on the same tree. The seeds are produced in large cones, squamose and turbinate. The extension of the branches is very regular in cedar trees; the ends of the shoots declining and thereby showing their upper surface, which is constantly clothed with green leaves so regularly as to appear at a distance like a green carpet, and, in waving about, make an agreeable prospect. The wood of this famous tree is accounted proof against the putrefaction of animal bodies. The sawdust is thought to be one of the secrets used by the mountebanks who pretend to have the embalming mystery. This wood is also said to yield an oil, which is famous for preserving books and writings; and the wood is thought by Bacon to continue above a thousand years sound."

(2) Various junipers: *Spec.* (a) the Virginian Cedar (*Juniperus virginiana*, (b) the Bermuda Cedar (*J. bermudiana*), and (c) the Barbadoes Cedar (*J. barbadensis*), &c.

2. (Of the order Cedrelacæ (Cedrelads): Various trees. *Spec.*, Bastard cedar=any species of the genus *Cedrela*; Bastard Barbadoes Cedar (*C. odorata*); Cedar of Australia (*C. australensis*).

3. Of other orders: Various trees belonging to the Meliaceæ, Byttneriacæ, &c.

B. As adj.: Pertaining to or made of the tree described under A.

¶ Obvious compounds: *Cedar-beam*, *cedar-like*, *cedar-top*.

cedar-bird, s.

Ornith.: A species of Chatterer, *Ampelis carolinensis*, also called the American Wax-wing. It derives its name from its partiality to cedars, upon the berries of which it is popularly supposed to feed.

cedar-wood, s.

1. Gen.: The wood of any of the ordinary cedars.

2. Spec.: A name given in Guiana to an easily worked and very aromatic wood, called also *Curana*, *Samaria*, *Acuyari*, and *Mara*.

çē-drā'-tī, s. [From Gr. *kedros*=the cedar-tree.] A perfume derived from a variety of the aurantiaceous Lime, *Citrus acida*.

çē-drē'-lā, s. [A dimin. from Lat. *cedrus*=a cedar.]

Bot.: A genus of plants, the typical one of the order Cedrelacæ. *Cedrela odorata*, or Barbadoes Bastard-cedar, a native of South America, has wood of a brown color, very fragrant, and is imported under the name of *flonduras*, or Jamaica Cedar. *C. Toona*, a native of Bengal, furnishes timber much like mahogany. The bark is very astringent, and has been found valuable in fevers, dysentery, &c. The flowers are used for producing a red dye. The bark of *C. febrifuga* is used against the intermittent fevers of Java.

çē-drēl'-ā'-çē-æ, s. pl. [Mod. Lat. *cedrel(a)*; and fem. pl. adj. suff. -aceæ.]

Bot.: A natural order of tharmifloral dicotyledons, placed by Lindley in his Rutal alliance. There are two sub-orders: 1. Swietenieæ; 2. Cedreleæ. They are natives of the tropics of America and India, and, very rarely, of Africa. They are generally very fragrant, aromatic, and tonic. Many supply compact and beautifully-veined timber, such as the mahogany of tropical America (*Swietenia mahoganii*); the Satin-wood of India (*Chloroxylon Swietenia*); the

Yellow-wood of New South Wales (*Oxleya xanthoxyla*); the Red-wood of Coromandel (*Soyimida febrifuga*), &c. The barks of *Cedrela febrifuga* and others are used as remedies in intermittent fevers and dyspeptic complaints. There are nine known genera and twenty-five species. (*Treas. of Botany*, &c.)

çē-drē'-lě-æ, s. pl. [Mod. Lat. *cedrel(a)*, and fem. pl. suff. -æe.]

Bot.: A sub-order of the order Cedrelacæ (q. v.).

çē-drīn, s. [Lat. *cedrinus*=pertaining to cedar; *cedrus*=a cedar.]

Chem.: A crystallizable substance extracted from cedron by the action of alcohol. It has an intensely and persistently bitter taste.

çē-drīne, a. [Lat. *cedrinus*; from Gr. *kedrinos*=pertaining to cedar; Lat. *cedrus*; Gr. *kedros*=cedar.] Of or pertaining to the cedar-tree; made of cedar.

çē-drī-ūm, s. [Lat., from *cedrus*=a cedar.]

Bot.: The pitch or resin of the great cedar-tree, which is used to rub over books and other articles to preserve them from moths, bookworms, &c.

çē-drōn, s. [From Lat. *cedrus*.]

Bot.: A tree, *Simaba Cedron*, a native of the hottest parts of New Granada. It yields to alcohol the crystallizable substance cedrin.

çē-drōn-ēl'-lā, s. [From Gr. *kedron*=the fruit of the cedar-tree, and Lat. dimin. suff. -ella.]

Bot.: A small genus of Labiatæ, natives of North America and the Canary Islands. They are sweet-scented, perennial herbs, or rarely shrubs, with pale purplish flowers.

çē-drŷ, s. [Eng. *cedar*; -y.] Like to or resembling cedar; having the nature or properties of cedar.

". . . of a yellow or more cedry color, . . ."—Evelyn: ii. 3, § 2.

***çēd'-ule**, s. [SCHEDULE.]

"Having brought up the law to the highest point against the viceroy of Sardinia, and that in an extraordinary manner, as may appear unto you by that printed *cedule* I sent you in my last."—Howell: *Familiar Letters*, 1650.

çē-du-ōūs, a. [Lat. *ceduus*; from *cedo*=to cut down, fell.] Fit or suitable to be felled.

"These we shall divide into the greater and more *ceduous* fruticant, and shrubby."—Evelyn: *Sylva* (Introd.), § 3.

çēil, ***çeelyn**, ***çiel**, ***çiele**, ***syle**, v. t. [Fr. *ciel*=(1) heaven, (2) a canopy, an inner roof; from Lat. *cælum*=heaven, cognate with Gr. *kóilos*=hollow; Low Lat. *cclō*=to arch, cover; Sp. & Ital. *cielo*=heaven, a roof, ceiling.] To overlay or cover over the interior roof of a room; to line the top or roof.

"Ceelyn wythe syllure. Celo."—Prompt. Parv.

"And the greater house he *ceiled* with fir-tree, which he overlaid with fine gold."—2 Chron. iii. 5.

çēiled, pa. par. or a. [CEIL, v.]

"How will he, from his house *ceiled* with cedar, be content with his Savior's lot, not to have where to lay his head?"—Decay of Piety.

çēil'-īng, pr. par. & s. [CEIL, v.]

A. & B. As pr. par. & particip. adj.: (See the verb.)

C. As substantive:

I. Ordinary Language:

1. Lit.: The inner roof, or upper horizontal or curved surface of an apartment opposite the floor, usually finished with plaster work.

2. Fig.: Applied to any covering, as to the sky as the roof of the earth.

"O'er heaven's expanse like one black ceiling spread."

Pope: *Homer's Iliad*, xvi. 355.

II. Technically:

1. Arch.: The upper surface of a room. Ceilings may be *plane*, *domed*, *cylindrical* or *groined*, *coved*, &c. (See these words.)

2. Shipbuilding: That portion of the inside skin of a vessel between the deck-beams and the limber-strakes on each side of the keelson. Also called the foot-waling. The strakes of the ceiling immediately below the shelf-pieces which support the deck-beams are called clamps. The outside planking is distinctively called the skin.

ceiling-joists, s. pl.

Carp.: Small beams which are either mortised into the sides of the binding-joists, or notched upon and nailed up to the under sides of those joists. The last mode diminishes the height of the room, but is more easily executed, and is by some thought not so liable to break the plaster as when the ends of the ceiling-joists are inserted into pulley mortises. (Gwilt.)

bōil, bōy; pōut, jōw1; cat, çell, chorus, çhin, bench; go, gem; thin, ðhis; sin, aș; expect, Xenophon, exist. ph = f -cian, -tian = șan. -tion, -sion = șūn; -țion, -șion = zhūn. -tious, -cious, -sious = șūs. -ble, -dle, &c. = be1, de1

çeil'-lînged, *a.* [Eng. *ceiling*; -*ed.*] Furnished or finished with a ceiling.

çêl'-a-dôn'-îte, *s.* [Fr. *céladonite*. In Ger. *sela-donit*, from Fr. *céladon*=sea-green, from *Celadon*, an insipidly tender person described in the French romance of *Astrée*. He was named after a mythological hero in Ovid. Remotely from Gr. *keladôn*=sounding with din or clamor (*Littré*).]

Mîn.: A soft green greasy mineral. Composition: Silica, 53; sesquioxide of iron, 28; magnesia, 2; potassa, 10; water, 6. Found in amygdaloid rocks at Mount Baldo, near Verona. (*Dana*).

çêl'-an-dîne, *s.* [Fr. *chélidoine*; Sp., Port., and Ital. *celidonia*; Lat. *chelidonia* (*herba*)=(plant) pertaining to the swallow, from Gr. *chelidonios*=pertaining to a swallow; *chelidôn*=a swallow.]

Bot.: The common name for *Chelidonium*, Swallow-wort. [CHELIDONIUM.]

"The swallows use *celandine*, the linnet 'euphrasia.'"—*More*.

Brave Celandine: A name invented by Lyte for *Caltha palustris*. (*Britten & Holland*.)

Great Celandine: *Chelidonium majus*. (*Lyte*.)

Lesser Celandine: *Ranunculus Ficaria*. (*Lyte*.)

Small Celandine: *Ranunculus Ficaria*.

Tree Celandine: *Bocconia frutescens*.

çêl'-â-rênt, *s.* [A coined word of no etym.]

Logic: A syllogism having the second proposition a universal affirmative, and the other two universal negatives, as "no animals are devoid of sense: all men are animals: therefore, no men are devoid of sense."

çê-lâs-trâ'-çê-æ, *s. pl.* [Lat. *celastr(us)*; and fem. pl. suff. -*aceæ*.]

Bot.: Spindle-trees, a natural order of calycifloral polypetalous dicotyledons, classed by Lindley in his Rhamnal alliance. They are shrubs or small trees, and are widely spread. There are two sub-orders: (1) *Euonymææ*, fruit dry and capsular; (2) *Elæodendreææ*, fruit drupaceous or cherry-like. They are all more or less acrid in their properties. They have a beautiful scarlet aril, which is derived from the sides of the opening in the seed. The wood of the European Spindle-tree is used in the manufacture of powder. There are thirty-five known genera and 280 species.

çê-lâs-trûs, *s.* [Gr. *kēlastros*=privet or holly.]

Bot.: A genus of plants, the typical one of the order Celastraceæ. *Celastrus scandens* is a climbing North American shrub, popularly known as Bitter-sweet or Wax-work. The seeds possess narcotic and stimulating qualities, while the bark is purgative and emetic. The scarlet-coated seed of *C. paniculatus*, a common Brazilian species, yields an oil which is used for burning in lamps. All the plants are widely spread.

***çê-lâ-tion**, ***çê-lâ-tioune**, *s.* [Lat. *celatus*, *pa. par.* of *celo*=to conceal.] Concealment.

"Neuirtheles he come to the said burght at the saide tyme accompaniit with fivetene hundreth men, to the effect he mycht performe his vickit purpoiss foirsaid; and in occultation and *celatioune* of the premissis," &c. —*Acts Mary*, 1567, ed. 1814, p. 572-3.

***çêl'-a-tûre**, *s.* [Lat. *cælatura*=engraving; *cælo*=to engrave in relief.]

1. The art or act of engraving.
2. That which is engraved or embossed.

"These *celatures* in their drinking cups were so framed, that they might put them on or take them off at pleasure, and were therefore called emblemata."—*Hackewill: Apology*, p. 372.

***çêl'-dom**, *adv.* [SELDOM.] (*Prompt. Parv.*)

***çêldr**, ***çeldre**, *s.* [CHALDER.]

"George of Gordoun—occupies a *celdre* of atis sawyne pertenant to Dunmetht and of the Bischoppis land be properte."—*Chart. Aberd.*, fol. 140.

***çêle**, *v. t.* [Fr. *celer*; Lat. *celo*=to conceal, to hide.] To conceal, to keep secret.

"Your counsall *celand* that ye schaw me; the best counsall that I can to gif to you, quhen ye charge me. In verbo Dei."—*Form. Jurament.*, Balfour's *Pract.*, p. 23.

***çêl'-ê-brâ-ble**, *a.* [O. Fr. *çêlêbrable*; Ital. *celebrabile*; Lat. *celebrabilis*.] Fit or worthy to be celebrated.

"Hercules is *celebrable* for hys hard trauaile."—*Chaucer: Boethius*, p. 147.

çêl'-ê-brant, *s.* [Lat. *celebrans*, *pr. par.* of *celebro*.] One who celebrates or officiates in any solemn office; especially applied to the minister who administers the Holy Communion.

"They had their orders of clergy, bishops, priests, and deacons; their readers and ministers; their *celebrants* and altars; their hymns and litanies."—*Newman: Development of Christian Doctrine*, ch. iv., § 2.

çêl'-ê-brâte, *v. t.* [Lat. *celebratum*, sup. of *celebro*=to frequent, solemnize; *celeber*=frequented, populous.]

I. Generally:

1. To perform or keep with solemn rites.

"Ye shall *celebrate* it in the seventh month."—*Lev. xliii. 41.*

"On the feast day, the father cometh forth, after divine service, into a large room, where the feast is *celebrated*."—*Bacon*.

2. To commemorate in any set form, either of joy or sorrow.

"This pause of power 'tis Ireland's hour to mourn; While England *celebrates* your safe return."—*Dryden: To the Duchess of Ormond*, 93.

3. To praise, extol, make famous or renowned.

"The songs of Sion were psalms and pieces of poetry, that adored or *celebrated* the Supreme Being."—*Addison*.

II. Spec.: To administer the Holy Communion.

¶ Crabb thus distinguishes between to *celebrate* and to *commemorate*: "Everything is *celebrated* which is distinguished by any marks of attention, without regard to the time of the event, whether present or past; but nothing is *commemorated* but what has been past. A marriage or a birthday is *celebrated*; the anniversary of any national event is *commemorated*. . . . *Celebrating* is a festive as well as social act; it may be sometimes serious, but it is mostly mingled with more or less of gaiety and mirth: *commemorating* is a solemn act; it may be sometimes festive and social, but it is always mingled with what is serious and may be altogether solitary. . . . The Jews *celebrate* their feast of the Passover; as Christians, we *commemorate* the sufferings and death of our Savior, by partaking of the Lord's Supper." (*Crabb: Eng. Synon.*)

çêl'-ê-brâ-têd, *pa. par. & a.* [CELEBRATE, *v.*]

A. As pa. par.: In senses corresponding to those of the verb.

B. As adj.: Famous, renowned.

¶ For the difference between *celebrated* and *famous* see FAMOUS.

***çêl'-ê-brâ-têd-nêss**, *s.* [Eng. *celebrated*; -*ness*.] The quality or state of being celebrated; celebrity, fame. (*Scott*.)

çêl'-ê-brât-îng, *pr. par., a. & s.* [CELEBRATE, *v.*]

A. & B. As pr. par. & part. adj.: In senses corresponding to those of the verb.

C. As subst.: The act of performing with solemn rites, or of praising; a commemoration, a celebration.

"But this Abuse is not sufficient Reason for us to give over the *Celebrating* of the Memory of such holy Men, as the Apostles and Martyrs of Christ were."—*Tillotson* (3d ed., 1722), vol. i., Ser. xxii.

çêl'-ê-brâ-tion, *s.* [Fr. *célebration*; Lat. *celebratio*, from *celebro*=to frequent, to solemnize.]

I. Generally:

1. A solemn performance of any ceremony or rites.

"He labored to drive sorrow from her, and to hasten the *celebration* of their marriage."—*Sidney*.

2. A commemoration of any occurrence, whether of joy or of sorrow.

"What time we will our *celebration* keep."—*Shakesp.: Twelfth Night*, iv. 3.

3. The act of praising or making famous; praise, renown.

"No more shall be added in this place, his memory deserving a particular *celebration*, than that his learning, piety and virtue, have been attained by few."—*Clarendon*.

II. Spec.: The act of administering the Holy Sacrament.

"During the *celebration* of this holy sacrament, you attend earnestly to what is done by the priest."—*Taylor*.

çêl'-ê-brâ-tôr, *s.* [Lat. *celebrator*, from *celebro*.] One who celebrates, a praiser, an approver.

"It [Scripture] has, among the wits, as well *celebrators*, and admirers, as disregards."—*Boyle: Style of Heb. Script.*, p. 174.

***çêl'-êb'-rî-oûs**, *a.* [Lat. *celeber*, *celebris*=famous, renowned.] Famous, renowned, celebrated.

"The Jews, Jerusalem, and the Temple, having been always so *celebrious* . . ."—*Grew*.

***çêl'-êb'-rî-oûs-lý**, *adv.* [Eng. *celebrious*; -*ly*.] In a famous or renowned manner.

***çêl'-êb'-rî-oûs-nêss**, *s.* [Eng. *celebrious*; -*ness*.] The state or quality of being celebrated or famous; fame, renown.

çêl'-êb'-rî-tý, *s.* [Fr. *çêlêbrité*; Lat. *celebritas*=fame, from *celeber*, *celebris*=famous.]

*1. The act of celebrating, a celebration.

"The manner of her receiving, and the *celebrity* of the marriage, were performed with great magnificence."—*Bacon*.

2. The state or quality of being celebrated or famous; fame, renown.

3. A celebrated or renowned person (generally in the plural).

***çêl'-ê-brou's**, *a.* [Lat. *celeber*, *celebris*.] Famous, celebrated.

"From the Greek isles philosophy came to Italy, thence to this western world among the Druids, whereof those of this isle were most *celebrious*."—*Howell: Familiar Letters*, 1650.

***çêl'-êr-êş'**, *s. pl.* [From pl. of Lat. *celer*=a light-armed horse-soldier.]

"The king administered justice publicly in the market-place, accompanied by his body-guard of 300 *celeres*."—*Lewis: Cred. Early Roman Hist.* (1855), ch. xi., § 1., vol. i., p. 415.

***çêl'-êr-î**, *s.* [CELERY.]

çêl'-êr-î-ac, *s.* [CELERY.] A species of parsley; also called turnip-rooted celery.

***çê-lêr-î-pê-dî-an**, *s.* [Lat. *celer* (genit. *celeris*)=swift, and *pes* (genit. *pedis*)=a foot; Eng. suff. -*an*.] A swift footman. (*Cockeram*.)

çêl'-êr-î-tâ', *con, adv.* [Ital.]

Music: With speed, haste; quickly. (*Stainer & Barrett*.)

çê-lêr-î-tý, *s.* [Fr. *çêlêrité*; Sp. *celeridad*; Ital. *celerità*, from Lat. *celeritas*=speed, celerity; *celer*=quick, speedy.] Speed, swiftness, velocity of motion. *Used*—

1. *Lit.*: Of things.

"Three things concur to make a percussion great; the bigness, the density, and the *celerity* of the body moved."—*Digby*.

2. *Fig.*: Of the mind, thought, &c.

"He carried his point with characteristic audacity and *celerity*."—*Macaulay: Hist. Eng.*, ch. xxiv.

¶ For the difference between *celerity* and *quickness* see QUICKNESS.

çêl'-êr-ý, *s.* [Fr. *çêleri*, from Prov. Ital. *seleri*, from Lat. *selinon*; Gr. *selinon*=parsley.]

Bot.: The common English name of *Apium graveolens*, a species of parsley. The blanched leaf-stalk of the cultivated varieties is used extensively for salads, &c. In its native state the seeds and whole plant are acrid and poisonous, and over indulgence in the cultivated plant is said to induce urinary disorders.

çê-lêš-tî-âl, ***çê-lêš-tî-âl**, *a., s. & adv.* [O. Fr. *çêlestiel*, from Lat. *cælestis*=pertaining to heaven; *cælum*=heaven.]

A. As adjective:

I. Literally:

1. Pertaining to the spiritual heaven.

"Against a solemn day, harnessed at hand, *Celestial* equipage."—*Milton: P. L.*, vii. 203.

2. Pertaining to the heavens.

"There stay, until the twelve *celestial* signs Have brought about their annual reckoning."—*Shakesp.: Love's Labor's Lost*, v. 2.

II. Figuratively:

1. Surpassing earthly things in excellence; angelic; divine.

"Their fortitude and wisdom were a flame *Celestial*, though they knew not whence it came."—*Cowper: Truth*, 532.

2. Inspired.

"Such the bard's prophetic words, Pregnant with *celestial* fire."—*Cowper: Boadicea*.

B. As substantive:

1. *Gen.*: An inhabitant of heaven.

"For who can tell (and sure I feare it ill) But that shee is some powre *celestial*?"—*Spenser: F. Q.*, II. iii. 44.

"Thns affable and mild the prince precedes, And to the dome th' unknown *celestial* leads."—*Pope: Homer's Odyssey*, i. 166.

2. *Spec.*: A native of China.

***C. As adverb**: In a celestial manner; divinely.

"In his face Youth smiled *celestial*, and to every limb Suitable grace diffused."—*Milton: P. L.*, iii. 638.

D. Special phrases:

Celestial-City: Heaven is so called by John Bunyan in his *Pilgrim's Progress*.

Celestial Empire: China; so called because its emperors are reputed to receive their authority from heaven, and assume the title "Son of Heaven."

¶ Crabb thus discriminates between *celestial* and *heavenly*: ". . . *Celestial* is applied mostly in the natural sense of the heavens; *heavenly* is employed more commonly in a spiritual sense. Hence we speak of the *celestial* globe, as distinguished from the terrestrial, of the *celestial* bodies, of Olympus as the *celestial* abode of Jupiter, of the

celestial deities; but on the other hand of the *heavenly* habitation, of *heavenly* joys or bliss, of *heavenly* spirits and the like. There are doubtless many cases in which *celestial* may be used for *heavenly* in the moral sense, but there are cases in which *heavenly* cannot so properly be substituted for *celestial*." (Crabb: Eng. Synon.)

†çĕ-lĕs'-tĭ-āl-ize, *v. t.* [Eng. *celestial*, and suff. -ize (q. v.).] To make celestial or heavenly. (Quar. Rev.)

"Heaven but earth terrestriated, and earth but heaven celestified."—Browne: *Vulg. Err.*, bk. iv, ch. xiii.

***çĕ-lĕs'-tĭ-fy-ing**, *pr. par., a. & s.* [CELESTIFY.] **A. & B. As pr. par. & particip. adj.:** (See the verb.)

C. As subst.: The act of making celestial.

çĕ-lĕs'-tĭn, **çĕ-lĕs'-tĭne** (1), *s.* [CELESTINES.] One of the order of monks known as Celestines (q. v.).

çĕ-lĕs'-tĭne (2), *s.* [From Lat. *cœlestis*=(1) heavenly, (2) sky-blue; Fr. *célestine*; Ger. *cölestin*.]

Min.: Native sulphate of strontia, SrO.SO₃. It occurs in prismatic or tabular crystals, belonging to the rhombic system. Specific gravity, 4. Its name refers to the sky-blue color sometimes presented by it. It is pretty widely distributed. By the action of nitric acid it is converted into nitrate of strontia, which is used for red-fire in theaters, fireworks, &c. It is called also Celestite.

Cĕ-lĕs'-tĭnes, *s.* [From Pope Celestine V.]

Eccles. Hist.: A monastic order instituted about 1254 by Pietro di Morone, afterward Pope Celestine V. Their first convent was at Morone, in the Apennines of Abruzzo. The order was a reform of that of St. Bernard. It became a very rich order both in France and Italy. In 1776-8 it was suppressed by Pope Pius VI.

cĕl'-ĕs-tĭte, *s.* [From Lat. *cœlest(is)*=heavenly, and Eng., &c., suff. -ite (*Min.*) (q. v.).] *Min.:* The same as Celestine (q. v.).

çĕ-lĕs'-tō-bār'-ĭte, *s.* [First called *baryto-celestine*. Then the relative position of the two words in the compound were reversed. From *celestine*, connective, and Eng. *barite* (q. v.).] *Min.:* A variety of barite containing much sulphate of strontian. Found in Switzerland.

"The despairing *celibataire* descanted on his whole course of love."—Godwin: *Mandeville*, ii. 268.

***çĕl'-ĭ-bat-ăr'-ĭ-an**, *s.* [Eng. *celibat(e)*, and suff. -arian.] A celibate.

çĕl'-ĭ-bate, *s. & a.* [Lat. *cœlibatus*. CELIBACY.]

A. As substantive:

***1. Single life, celibacy.**

"If any persons, convict of this unchastity, are in the state of *celibate*, they are only chastised with scourges."—L. Addison: *Description of West Barbary*, p. 172.

2. One who devotes himself to a single life, a bachelor.

B. As adj.: Unmarried, single.

***çĕl'-ĭ-bate**, *v. i.* [CELIBATE, *s.*] To lead a life of celibacy.

"The males oblige themselves to *celibate*, and their multiplication is hindered."—Graunt.

çĕl'-ĭ-bat-ĭst, *s.* [Eng. *celibat(e)*, -ist.] A celibate. (For. Quar. Rev.)

"Furth of his palice riall ischit Phebus—Defoundand from his sege etheriall Glade influant aspectis *cœlicall*."—Douglas: *Virgil*, Prol., 399, 47.

çĕl'-ĭ-dōg'-raph-ÿ, *s.* [Fr. *célidographie*, from Gr. *kēlis*=a spot, and *graphō*=to write.] A description or treatise of the spots on the sun. (Crabb.)

***çĕl'-ĭ-dōn-ÿ**, ***çĕl'-ÿ-dōn-ÿ**, *s.* [CHELIDONIUM.]

Bot.: A plant, *Chelidonium majus*. (Prompt. Parv.)

çĕll, ***çĕlle**, ***çeele**, *s. & a.* [O. Fr. *celle*; Lat. *cella*.]

A. As substantive:

1. Ordinary Language:

1. Literally:

(1) A small room or apartment in a monastery or convent inhabited by a person devoted to religion.

"A monke of a *celle*."

Robert of Gloucester, p. 267.

(2) A small room in a prison or asylum.

"... regarded as fit only for a *cell* in Saint Luke's."—Macaulay: *Hist. Eng.*, ch. xxiii.

(3) A small religious house, attached to a monastery or convent.

"As loud as doth the chapell belle,

There as this lord was keeper of the *celle*."

Chaucer: C. T., 172.

(4) A cottage, or small place of residence.

"In cottages and lowly *cells*."

Somerville: *Epitaph on Hugh Lumber*.

(5) A small cavity or hollow place.

2. Fig.: A place of existence, a seat.

"Mine eyes he closed, but often left the *cell*

Of fancy, my internal sight."

Milton: P. L., viii. 460.

II. Technically:

1. Entom.: The compartments of a honey-comb.

2. Bot.: The substance of plants is not homogeneous, but is composed of small structures, generally indistinguishable by the naked eye; and each of those, at least, for a time, is a whole complete in itself, being composed of solid, soft, and fluid layers, different in their chemical nature, and disposed concentrically from without inwards. These structures are termed *cells*. For the most part, a group of them is in close contact, and firmly united; they then form a *cell-tissue*. Each cell fulfills its own definite part in the economy of the plant, and shows a variety in form corresponding to the different functions. By far the largest proportion of cells in the living succulent parts of plants are seen to be made up of three concentrically-disposed layers: first, an outer skin, firm and elastic, called the *cell-wall* or *cell-membrane*, consisting of a substance peculiar to itself. [CELLULOSE.] The second layer is soft and elastic, and always contains albuminous matter. [PROTOPLASM.] And thirdly, the cavity inclosed by the protoplasm-sac is filled with a watery fluid called *cell-sap*.

3. Anat. & Zool.: A term often applied to any small cavity but properly restricted to a microscopical anatomical element with a nucleus *cell-wall* and *cell-contents* when typically formed. (Huxley.) The animal cell is ordinarily a closed sac, the enviroining membrane almost always consisting of a nitrogenous compound. The sac generally contains a liquid or semi-fluid protoplasm, in which are suspended molecules, granules, globules, or other very minute cells. Along with these are *nuclei*, which again contain *nucleoli*. [NUCLEUS, NUCLEOLUS.] Cells may be formed from a protoplasm existing without the cell or within other cells. Or they may be made within others by what has hence been called an endogenous method or by division or in other ways. (Griffith & Henfrey.)

"It is of cells that the tissues are built up and the nerves formed. There is no part of the human body in which the cell is not seen. All these cells are nucleated—have in them a central life-spot, like the yolk of an egg. Each cell is born, reproduces itself, dies and is absorbed. The maintenance of life and health depends upon the constant regeneration of the cells. When man can control the life and death of the cell he becomes the creator."—Prof. Rudolph Virchow, 1902.

4. Arch., &c.:

(1) The space between the two ribs of a vault.

(2) The space inclosed within the walls of an ancient temple.

5. Iron-working: A structure in a wrought-iron beam or girder; a tube consisting of four wrought-iron plates riveted to angle-iron at the corners.

6. Elect.: A single jar, bath, or division of a compound vessel containing a couple of plates, say copper and zinc, united to their opposites or to each other usually by a wire [GALVANIC BATTERY.]

B. As adjective: (See the compounds.)

cell-contents, *s. pl.*

Bot. Physiol.: Substances contained in cells. Of solid substances there are pigments, starch, crystalline formations, aleurone, and resin; of fluids, oil, caoutchouc, viscin, and gutta percha, with sugar, tannic acid, and inuline dissolved in water. (Thomé: Botany. ed. Bennett.)

cell-division, *s.*

Bot. Physiol.: The division of a plant cell into two as the plant develops.

cell-door, *s. & a.* (See the compounds.)

Cell-door lock: A prison-door lock, to whose bolt no access is possible from the inside, and which may fit in a rabbit in the door-jamb.

cell-family, *s.*

Bot. Physiol.: A group of cells genetically and organically united. They have originated from a single "mother-cell." (Thomé: Botany, ed. Bennett.)

cell-fluids, *s.*

Bot. Physiol.: The fluids in the cells of plants. [CELL-CONTENTS.]

cell-formation, *s.*

Bot. Physiol.: The mode of origin and multiplication of cells. (Thomé.)

cell-fusion, *s.*

Bot. Physiol.: Cells united into a group the elements (i. e., the separate cells) of which can still be recognized, and still possess a certain individuality. (Thomé.)

cell-membrane, *s.*

Bot. Physiol.: [MEMBRANE.]

cell-sap, *s.*

Bot. Physiol.: The watery fluid contained in a cell as distinguished from the mucilaginous semi-fluid protoplasm.

cell-tissue, *s.*

Bot. Physiol.: [TISSUE.]

cell-wall, *s.*

Bot. Physiol.: The wall of a cell surrounding its cavity.

"Some of the foregoing words may be used in an analogous sense of animal cells.

çĕl'-lā, *s.* [Lat.] The interior space of a temple.

***çĕl'-lār**, ***çĕl'-ēr**, *s.* [O. Fr. *celier*; Lat. *cellarium*.]

1. A vault or place underground where liquors and stores are kept.

"Each band marched to the nearest manse, and sacked the *cellar* and larder of the minister, . . ."—Macaulay: *Hist. Eng.*, ch. xiii.

***2. A case or box; a receptacle for bottles.** [SALT-CELLAR.]

"Run for the *cellar* of strong waters quickly."—Ben Jonson: *Mag. Lady*, iii. 1.

çĕl'-lār-age (age as ĭğ), *s.* [Eng. *cellar*, and suff. -age.]

1. That part of a building in which the cellars are constructed; cellars.

"... you hear this fellow in the *cellarage*,"

Consent to swear."—Shakesp.: *Hamlet*, i. 5.

2. The charge made or money paid for the storage of goods in a cellar.

çĕl'-lār-ēr, ***çĕl'-lēr-ēr**, **çĕl'-ēr-ēr**, *s.* [Eng. *cellar*; -er.] The officer in a monastery appointed to take charge of the stores; a butler.

"Upon my faith, thou art some officer,

Some worthy sextein, or some *celerer*."

Chaucer: *Monk's Prologue*.

çĕl'-lār-ēt', *s.* [Eng. *cellar*, and dimin. suff. -et.] A small case with compartments for holding bottles. (Smart.)

†çĕl'-lār-ĭng, *s.* [Eng. *cellar*; -ing.] Cellarage.

"... a retired and peaceful cottage, situated in a delightful sporting country, with attached and detached offices, roomy *cellaring*, and commodious attics."—Morton: *Secrets worth knowing*, iii. 4.

çĕl'-lār-ĭst, *s.* [Eng. *cellar*; -ist.] The officer in a religious house who had charge of the provisions, &c.; a cellarer.

†çĕl'-lār-ōus, *a.* [Eng. *cellar*; -ous.] Belonging to a cellar, subterranean, sunk.

"A little side-door . . . stood open and disclosed certain *cellarous* steps."—Dickens: *Uncom. Traveller*, ix.

çĕlled, *a.* [CELL.]

***1. Confined in a cell.**

"*Celled* under ground."—Warner.

2. Containing one or more cells.

çĕl'-lē-pōr'-ā, **†çĕl'-lī-pōr'-ā** (Mod. Lat.), **çĕl'-lē-pōre**, **†çĕl'-lī-pōre** (Eng.), *s.* [Lat. *cella*=a cell, and *porus*, Gr. *poros*=a passage.]

Zool.: A genus of infundibulate Polyzoa, the typical one of the family Celleporidæ (q. v.). It is distinguished by the massive globose and incrusting, or erect and branched calcareous polypidom, and the irregularly heaped vasiform cells, vertical to the common plane, with a beak on one or both sides, furnished with an avicularium. (Griffith & Henfrey.)

bōil, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem: thin, this; sin. aş; expect, Xenophon, exist. ph = f. -clan, -tlan = şan. -tion, -sion = şūn; -tĭon, -şion = zhūn. -tious, -cious, -sious = şüş. -ble, -dle, &c. = bēl, dēl.

çel-lë-pör'-i-dæ, *s. pl.* [From Mod. Lat. *cellepora* (q. v.), and fem. pl. adj. suff. *-idæ*.]

Zoöl.: A family of infundibulate Polyzoa, of the sub-order Cheilostoma. It contains the single genus *Cellepora* (q. v.).

çel-lif-ër-ous, *a.* [Lat. *cella*=a cell; *fero*=to bear.] Having or containing cells.

çel-lites, *s. pl.* [From Lat. *cellita*. So called from the cells which they inhabited.]

Ch. Hist.: An order of monks who arose at Antwerp in the fourteenth century. They were called also the Brethren and Sisters of Alexius, whom they had for their patron saint. They specially attended to the visitation of the sick and dying. They were sometimes called Lollards (q. v.). (*Mosheim*.)

çel'-lô (*sing.*), **çel'-lî** (*pl.*), *s.* [Ital.] An abbreviation of *violoncello*. (*Stainer & Barrett*.)

çell'-u-lar, *s. & a.* [Fr. *cellulaire*, from Lat. *cellula*, dimin. or *cella*=a cell.]

A. As substantive:

Bot.: A plant having no distinct stem nor leaves, but forming a cellular expansion of various kinds, which bears the organs of reproduction.

B. As adj.: Consisting of cells or little cavities. **cellular-beam**, *s.* An application of wrought-iron, in which wrought-iron plates are riveted with angle-irons in the form of longitudinal cells, with occasional cross struts.

cellular pyrites, *s. pl.*

Min.: A variety of Marcasite.

cellular quartz, *s.*

Min.: A variety of quartz. (*Brit. Mus. Cat.*)

cellular system, *s.*

Bot. Physiol.: The part of a plant which consists of cells (q. v.) (*Lindley, &c.*), or spiral vessels, or has a tendency to them, though till lately the latter were supposed to be confined to plants of higher organization.

cellular theory, *s.* A theory according to which all the vegetable and animal tissues are derived from the union and metamorphosis of primitive embryonic cells.

cellular tissue, *s.*

1. **Bot. Physiol.**: A kind of tissue made of a number of separate cells of minute bags adherent together. These, when first formed, are usually nearly globular or egg-shaped, but afterward by pressure become flattened. It is often called parenchyma.

2. **Animal Physiol.**: Fibro-cellular connective or areolar tissue (q. v.). It is found filling interstices between the various organs in man and the vertebrated animals.

çell-u-lär-ës, *s. pl.* [Pl. of Mod. Lat. *cellularis*=cellular, from Class. Lat. *cella*=a cell.]

Bot.: A name given to Cryptogams, from an erroneous notion that they are composed entirely of cells. *Podaxon* among fungi, and *Conferva Melagonyum* among algae, are excellent examples.

çell-u-lär'-i-a, *s.* [Lat. *cellul(a)*=a little cell, dimin. of *cella*; and neut. pl. suff. *-aria*.]

Zoöl.: A genus of infundibulate Polyzoa (Bryozoa), of the sub-order Cheilostomata, and family Cellulariade. It is distinguished by the jointed, branched, erect polypidom, with flat linear branches, the contiguous cells in two or three rows, perforated behind, and more than four between two joints, and the absence of avicularia and vibracula. (*Griff. & Henfrey*.)

çell-u-lär'-i-a-dæ, *s. pl.* [Mod. Lat. *cellulari(a)*, and fem. pl. suff. *-adæ*.]

Zoöl.: A family of infundibulate Polyzoa (Bryozoa), or the sub-order Cheilostomata. They are distinguished by the branched, erect polypidom, and the flat linear branches, with the cells in one plane. (*Griff. & Henfrey*.)

çell-u-lär'-i-i, *s. pl.* [Lat. *cellula*, dimin. of *cella*=a cell.]

Zoöl.: A family of Corals, in which each polypus is adherent in a corneous or calcareous cell, with thin walls.

çell'-u-lä-tëd, *a.* [Lat. *cellul(a)*, and Eng. suff. *-ated*.] Formed or consisting of cells.

çell'-ule, *s.* [Fr. *cellule*, from Lat. *cellula*, dimin. of *cella*=a cell.] A little cell.

çell-u-lif-ër-ous, *a.* [Lat. *cellula*=a little cell; *fero*=to bear, and Eng. suff. *-ous*.] Bearing or producing cellulose or little cells, or cellular tissue.

çell'-u-lîne, *a.* [Lat. *cellula*=a little cell, and suff. *-ine* (Chem.).] The same as CELLULOSE (q. v.).

çel'-lû-lôid, *a. & s.* [Lat. *cellula*=a little cell, and Gr. *eidos*=form, appearance.]

A. As adjective:

Nat. Science: Having the form or appearance of one or more small cells.

B. As subst.: An ivory-like compound, which can be molded, turned, or otherwise manufactured for various purposes for which, before its introduction, ivory and bone were employed. The process of manufacture is as follows: Paper, by immersion in sulphuric and nitric acids, is converted into nitro-cellulose. This product, after washing and bleaching, is passed through a roller-mill, with the addition of a certain quantity of camphor. Celluloid softens at 176° Fahr., when it can be molded into the most delicate forms, to become hard when cold. It is very inflammable, unless blended with some chemical having an opposite property.

The word celluloid as applied in this country to this compound is a legally registered trademark.

çell'-u-löse, *a. & s.* [Lat. *cellul(a)*=a little cell; *cella*=a cell, and Eng. suff. *-ose*.]

A. As adj.: Consisting of or containing cells.

B. As subst.: A substance of general occurrence, and constituting the basis of vegetable tissues. Its chemical formula is $C_{24}H_{21}O_{21}$ or $2(C_{12}H_{10}O_{10}) + HO$. It is in many respects allied to starch, and is changed into starch by the unaided action of heat, or by sulphuric acid, or caustic potash. Cellulose was long considered as peculiar to vegetable tissues, but it has been shown by Schmidt, Löwig, and others to exist in the tissues of ascidia and other molluscos animals. Pure cellulose is a ternary compound of carbon and the elements of water.

¶ Cellulose prepared from cocoanut-fiber, and also from corn-pith, is used for packing the sides of the steel hulls of warships along the water line, to prevent the inflow of water through holes made by projectiles. The cellulose quickly absorbs enough water to expand it sufficiently to stop the leakage.

çê-lô'-sî-a, *s.* [Gr. *kēleos*=burning, from *kaiō*=to burn, from the appearance of the flowers.]

Bot.: A genus of amaranthads, consisting principally of tropical annuals. The best known *Celosia cristata*, the Cockscomb of our gardens, has astringent qualities.

çê-lôt'-ômý, *s.* [Fr. *celotomie*, from Gr. *kēlē*=a tumor, and *tomē*=a cutting, from *temnō*=to cut.]

Surg.: An operation for the radical cure or inguinal hernia, by ligature of the sac and spermatic cord.

çel'-sî-a, *s.* [Named in honor of Dr. Olaus Celsius, Professor of Oriental languages in the University of Upsal.]

Bot.: A small genus of linariads closely allied to *Verbascum*. The species are annuals or biennials, with entire or pinnatifid foliage, and spikes of bright yellow mullein-like flowers.

***çel'-sî-tûde**, *s.* [Lat. *celsitudo*=height, from *celsus*=high, lofty.]

1. **Lit.**: Height, altitude.

2. **Fig.**: Nobility, excellence.

çelt (1), **Celt** (1), *s.* [Lat. *celti*; Gr. *keltoi*, *kel-tai*; Wel. *celtiad*=one dwelling in a covert, an inhabitant of the woods, from *cel*=cover, shelter; *celv*=to cover, shelter, akin to Lat. *celo* (Mahn).] [**KELT**.]

Anthrop.: One of an ancient race of Asiatic origin, who formerly inhabited a great part of Gaul, Italy, Spain, and Britain, and whose descendants still occupy the Highlands of Scotland, Ireland, Wales, and part of the North of France.

çelt (2), **celt** (2), *s.* [Lat. *celtis*=a chisel, perhaps from being used by the Celts.]

1. The longitudinal and grooved instrument of mixed metal often found in Scotland.

2. A stone instrument of a wedgelike form found in barrows and other repositories of Celtic antiquarian remains.

¶ Though the primary application of the word *celt* was to the metallic implement, yet the stone celt (No. 2) is believed by archaeologists and geologists to be the older of the two.

çelt-i-bër-i-an, *a. & s.* [Lat. *Celtiber*, *Celtibericus*, from *Celtiberia*, a district of Spain.]

A. As adj.: Pertaining to Celtiberia or its inhabitants, the Celtiberi or Celts of the Iberus (Ebro), in Spain.

B. As subst.: A native or inhabitant of Celtiberia.

çel'-tic, **Cel'-tic**, *a. & s.* [Lat. *celticus*; Gr. *kel-tikos*.]

A. As adj.: Of or pertaining to the Celts or their language.

B. As subst.: The language of the Celts.

¶ Remains of the Celtic language survive in Gaelic, Erse or Irish, Manx, Welsh, and Armorican or Breton.

Celtic architecture, *s.*

Arch.: A type of architecture existent in Great Britain before the Roman invasion. It is called also Druidic, but it is a question whether the structures classed under it are all really pre-Roman.

Celtic pipes, *s.* [**ELFIN PIPES**.]

çel'-ti-çîsm, *s.* [Eng. *celtic*; *-ism*.] A custom of the Celts, or an idiom of their language.

çel'-tis, *s.* [Lat. *celtis*, the name for an African species of Lotus.]

Bot.: A genus of Ulmaceæ (Elms) known as Nettle-trees. The fruit of the European Nettle-tree, *Celtis australis*, is supposed to be the Lotus of the classic nations. The tree grows on both sides of

Celtis.

1. End of branch in fruit. 2. Flower. 3. Flower with perianth removed.

the Mediterranean. The young branches are boiled, and the infusion used against dysentery and hemorrhæa. The kernel of the tree furnishes a useful oil. The seeds of *Celtis occidentalis* of America, here called the Nettle-tree or Sugar-berry, are given in dysentery, while the root, bark, and leaves of *Celtis orientalis* are used in the East against epilepsy. (*Lindley, &c.*)

***çê'-lÿph-ûs** *s.* [From Gr. *kelyphos*=a husk, a rind, a pod or shell of a fruit.]

Entom.: A genus of dipterous insects of the family Lauscanidæ. The antennæ are wide apart, as long as the head, stylet rather thick and covered with fine hairs; scutellum convex and covering the abdomen. The species have more the appearance of little beetles than diptera, owing to the immense size of the scutellum. Only two species are known, *Celyphus obtusus*, a native of Java, and *C. scutatus*, a native of the East Indies.

çê-mënt', ***çi-ment**, ***çy-ment**, ***sy-ment**, *s. & a.* [O. Fr. *cement*; Fr. *ciment*; Sp. & Ital. *cimento*; Lat. *cæmentum*=coarse stones, rubble, an abbreviation of *cædimentum*, from *cædo*=to cut.]

A. As substantive:

I. Ordinary Language:

1. **Literally:**

(1) **Gen.**: Matter with which two bodies are joined together.

"Thei hadden tiles for stoons, and towgh cley for symment."—*Wycliffe: Gen. xi. 3.*

(2) **Spec.**: [II. 1.]

2. **Fig.**: Anything which forms a bond of union socially and morally.

"For lost, this social cement of mankind

The greatest empires, by scarce-felt degrees."

Thomson: Liberty, pt. v.

¶ In some of the poets the accent is on the first syllable, both in the noun and verb.

II. Technically:

1. **Building**: Of cements there are many varieties, according to the special needs of different trades. In building the principal are known as Portland and Roman. There are many places in this country in which are found the ingredients necessary for the manufacture of the various cements described below, and many different varieties of the article are made. Where Portland cement is specified in a building contract the imported variety is meant.

(1) **Portland cement** was patented in England by Joseph Aspdin in 1824. It is so called because it resembles in color Portland-stone. It is manufactured by calcining a mixture of clayed mud from the Thames with a proper portion of chalk. The calcined mass is then reduced to a fine powder, and intimately mixed with the addition of water. The resulting paste is molded into bricks, dried and burnt. The heat during the process of calcining must be a white heat, otherwise the carbonic acid and water may be expelled without the reaction between the lime and the clay necessary for the production of cement. The material is then assorted, all which has been too much or too little calcined being set aside and pulverized.

(2) **Roman cement** is a name given to certain hydraulic mortars, varying considerably in their chemical composition, though physically possessing the same general character. Lime stone is calcined and covered with sand in various proportions.

fâte, fât, färe, amidst, whât, fäll, father; wê, wêt, hère, camêl, hêr, thêre; pîne, pît, sîre, sîr, marîne; gô, pôt, or, wôre, wôlf, wôrck, whô, sôn; mâte, cûb, cûre, ûnite, cûr, rûle, fûll; trÿ, Sÿrian. æ, œ = ê; ey = â. qu = kw.

Any limestone containing from fifteen to twenty per cent. of clay will, when properly prepared, form this cement. Calcine any ordinary clay and mix it with two-thirds its quantity of lime, grind to powder, and calcine again. The epithet Roman is improperly given, since the preparation was entirely unknown to the Romans.

(3) *Hydraulic Cement* is a kind of mortar used in building piers and walls under or exposed to water. There are many varieties, one of the best being composed of ground Portland-stone sixty-two parts, sand thirty-five, and litharge three.

2. *Glass manufacture*: Cement for glass is of various kinds, according as it is designed for ordinary or for chemical glasses, for the necks of bottles, for lens grinders, or for affixing metallic letters to plate-glass windows.

3. *Gold Mining*: Gravel cemented by clay, constituting an auriferous stratum in Sierra Nevada and Placer Counties in California, and in others of the western gold fields.

Metallurgy:

(1) A brown deposit in the precipitation tank in which the soluble chloride of gold obtained by the chlorination process is deposited by the addition of sulphate of iron to the solution.

(2) The material in which metal is imbedded in the cementing furnace (q. v.). (*Knight*.)

5. *Odontology*: The tissue which forms the outer crust of the tooth. It is less bony than dentine, and commences at the cervix or neck of the tooth, where the enamel terminates, increasing in thickness to the lower extremities of the root. An artificial cement is now much used by dentists in filling cavities of carious teeth.

"A single tooth may be composed of dentine, cement, enamel, and bone: but the dentine and cement are present in the teeth of all reptiles."—*Owen: Anatomy of Vertebrates*.

B. *As adj.*: (See the compounds.)

cement-ducts, s. pl.

Zoöl.: Ducts opening through the prehensile antennæ in the Cirripeds. (*Darwin*.)

cement-gland, s.

Zoöl.: A gland the secretion of which glues down the prehensile antennæ of the Cirripeds. (*Darwin*.)

cement-mill, s. A mill for grinding the septaria or stony concretions from which cement is made.

cement-spreader, s.

Building: A machine for coating and saturating felt or paper with liquid cement for roofing purposes.

çẽ-mẽnt', v. t. & i. [CEMENT, s.]

A. Transitive:

1. *Lit.*: To unite by means of some material interposed.

"Liquid bodies have nothing to cement them."—*Burnet: Theory of the Earth*.

2. *Fig.*: To unite together socially or morally.

"But how the fear of us

May cement their divisions,"

Shakesp.: Antony and Cleopatra, ii. 1.

*B. *Intrans.*: To become joined, to join, to cohere.

"When a wound is recent, and the parts of it are divided by a sharp instrument, they will, if held in close contact for some time, reunite by inoculation, and cement like one branch of a tree ingrafted on another."—*Sharp: Surgery*.

*çẽ-mẽn'-təl, a. [Eng. cement; -al.] Pertaining to or composed of cement.

"Cemental tubes."—*Owen*.

*çẽ-mẽn-tā'-tion, s. [Low Lat. *cementatio*, from *cementum*.]

1. *Ord. Lang.*: The act of cementing or of joining with cement.

2. *Chem.*: A chemical process which consists in imbedding a solid body in a pulverulent matter, and exposing both to ignition in a metallic or earthen case. In this way iron is cemented with charcoal to form steel; and bottle-glass with gypsum powder, or sand, to form Reaumur's porcelain. (*Ure: Dictionary of Arts, Manufactures, and Mines*.)

çẽ-mẽnt'-ẽd, pa. par. & a. [CEMENT, v.]

cemented-back, s. & a. (See the compound.)

Cemented-back carpet: In forming cemented-back carpet a number of warp-threads are arranged in a frame, and are brought into a convoluted form by means of metallic plates, which are laid strictly parallel. The under side of the warps thus doubled or folded are then dressed to raise a nap, and this surface is then smeared with cement and backed by a canvas or coarse cloth. When dry, the metallic strips are removed by cutting the loops, and leaving a pile surface, as in the Wilton carpets.

çẽ-mẽnt'-ẽr, s. [Eng. cement; -er.] One who, or that which cements or joins things together. (*Lit. & fig.*)

"... language, which was to be the great instrument and cement of society."—*Locke*.

çẽ-mẽnt'-ĩng, *çẽ-men-tynge, pr. par., a. & s. [CEMENT, v.]

A. & B. *As pr. par. & particip. adj.*: (See the verb.)

C. *As substantive*:

1. The act of uniting or joining together. (*Lit. & fig.*)

"Oure cementynge and fermentacioun."

Chaucer: C. T., 12,744.

2. That which cements or joins.

cementing-furnace, s. A furnace by which an article is packed in the powder of another substance, and therewith subjected to a continued heat below the fusing-point. The article is changed by a chemical reaction with the powder.

çẽ-mẽn-tĩ'-tious, a. [Lat. *cementitius*=of or pertaining to rubble; *cementum*=rubble, &c.] Pertaining to or of the nature of cement or stucco.

"In some parts the cementitious work is enforced."—*Forsyth: Italy*, p. 126. (*Latham*.)

çẽm-ẽ-tẽr'-i-əl, a. [Eng. cemetery, and suff. -al.] Of or pertaining to a cemetery.

"Any ameliorations of our present cemeterial system being obtainable."—*Haden: Earth to Earth*, p. 66 (1875.)

çẽm-ẽ-tẽr'-ỹ, *çym-y-toyre, s. [Fr. *cémétairie*; Ital. *ciméterio*; Low Lat. *cœmeterium*, from Gr. *koimētērion*=a sleeping place, a cemetery; *koimāō*=to lull to sleep.]

1. *Ord. Lang.*: A place where the dead are buried, a burial-ground not around a parochial or other church. [BURIAL-PLACE.]

"That one of the *cymytoyres* was in erles, and that other in burdeale."—*Caxton: Charles the Grete*, p. 243 (ed. *Herbage*).

2. *Law*: In this country cemeteries are usually places of sepulture at a convenient distance from the centers of population. They are generally the property of private corporations, or in rare cases are owned by municipal corporations. Lots are sold in them either in fee or are leased for a term of years. They are governed by boards of directors, who act in obedience to their by-laws, made in conformity with the statutes of the state in which they are located. They are usually under the jurisdiction of the department of public health of their respective commonwealths, and no interments or resurrections can take place without a legal permit from the proper officer. In England a permanent grave can be purchased in a cemetery, whereas it cannot be in a church-yard, by reason of the existence of a national church.

çẽ-nān'-gĩ-ũm, s. [Gr. *kenos*=empty; *angeion*=a vessel.]

Bot.: A genus of Phacidiacei (Ascomycetous Fungi) growing upon dead twigs, bursting through the bark in the form of little cups or hollow papillæ. (*Griff. & Henfrey*.)

çẽn'-an-thỹ, s. [From Gr. *kenos*=empty, and *anthos*=a blossom, a flower.]

Bot.: The suppression of the essential organs, viz., stamens and pistils, in a flower. (*R. Brown*, 1874.)

*çẽ-nā'-tion, *çœ-nā'-tion, s. [Lat. *cœnatio*=a meal taking; *cœna*=a meal, supper.] Meal-taking.

"The summer lodgings regard the equinoctial meridian, but the roomes of *cœnation* in the summer, he obverts into the winter assent, that is south-east."—*Browne: Vulgar Errors*, p. 309.

çẽn'-nā-tõr'-ỹ, a. [Lat. *cœnatorius*=pertaining to a supper; *cœna*=supper.] Relating to or fit for supper.

"The Romans washed, were anointed, and wore a *cœnatory* garment; and the same was practiced by the Jews."—*Browne: Vulgar Errors*.

çẽn-chrĩ'-nā, s. [From Mod. Lat. *cenchrus* (q. v.), and neut. pl. adj. suff. -ina.]

Zoöl.: A sub-family of the Crotalidæ.

*çẽn'-chrĩs, s. [From Gr. *kenghris*=(1) a kind of bird; (2) a kind of serpent.]

Zoöl.: A genus of American serpents, family Crotalidæ (Rattle-snakes). [CENCHRINA.]

çẽn-cras'-tũs, s. [Fr. *cenchrute*; Lat. *cenchrus*, from Gr. *kenchros*=millet.] A serpent of a greenish color, having its speckled belly covered with spots resembling millet-seeds.

çẽn-ẽs-thẽ'-sis, s. [Gr. *koinos*=common, and *ai̓sthesis*=feeling.] The prevailing conscious state of feeling, either pleasurable or painful. *Cenesthesia* is sometimes termed the "sixth sense."

çẽ-nõ-bĩte, s. [Lat. *cœnobita*=living in common, from Gr. *koinos*=common, and *bios*=life.] A monk living in a community. (*Mosheim*.)

çẽ-nõ-bĩt'-ic, *çœ-nõ-bĩt'-ick, *çẽ-nõ-bĩt'-i-çal, a. [Fr. *cénobitique*.]

1. Of or belonging to a cenobite.

"... such as are abstinence from blood, and from things strangled, the *cœnobic* life of secular persons, &c."—*Bp. Taylor: Lib. of Prophesying*, s. 5.

2. Living in community.

"They have multitudes of religious orders, black and grey, eremitical and *cœnobitical*, and nuns."—*Stillin'fleet*.

çẽ-nõ-bĩt'-ĩsm, s. [Eng. *cenobit(e)*; -ism.] The state of being a cenobite; the belief or practice of a cenobite.

Cowper: Table Talk.

çĕn'-sure (s as sh), v. t. & i. [CENSURE, s.]

A. Transitive:

1. To form or give a judgment or opinion regarding anything without its being implied that this award was unfavorable.

"His voyage was variously *censured*; the Templars who consented not to the peace, flouted thereat . . ."—*Fulder: The Holy War*, vol. iv., ch. 3.

¶ It is not creditable to man's candor in judging of others that the word *censure* in process of time became limited to the pronouncing of unfavorable judgments, these having from the first been so much more numerous than favorable verdicts that the word *censure* ceased to be applied to the latter at all.

*2. To condemn judicially, to sentence.

"Has *censur'd* him Already, and, as I hear, the provost hath A warrant for his execution."

Shakesp.: Measure for Measure, i. 5.

3. To blame, to find fault with, to reprimand.

"To *censure* Homer, because it is unlike what is never meant to resemble, . . ."—*Pope: Homer's Odyssey*, Postscript.

*B. Intrans. To form or give an opinion, to judge (followed by *on*).

"'Tis a passing shame, That I, unworthy body as I am, Should *censure* thus on lovely gentlemen."

Shakesp.: Two Gent. of Verona, i. 2.

¶ (1) Crabb thus discriminates between to *censure*, to *animadvert*, and to *criticize*: "To *censure* and *animadvert* are both personal, the one direct, and the other indirect; *criticism* is directed to things and not to persons only. *Censuring* consists in finding some fault real or supposed; it refers mostly to the conduct of individuals. *Animadvert* consists in suggesting some error or impropriety; it refers mostly to matters of opinion or dispute. *Criticism* consists in minutely examining the intrinsic characteristics and appreciating the merits of each individually or the whole collectively; it refers to matters of science and learning. To *censure* requires no more than simple attention; its justice or propriety often rests on the authority of the individual; *animadversions* require to be accompanied with reasons. . . . *Criticism* is altogether argumentative and illustrative. . . ."

(2) He thus distinguishes between to *censure*, to *carp*, and to *cavil*: "To *censure* respects positive errors, to *carp* and *cavil* have regard to what is trivial or imaginary; the former is employed for errors in persons, the latter for supposed defects in things. *Censures* are frequently necessary from those who have the authority to use them. . . . *Carping* and *caviling* are resorted to only to indulge ill-nature and self-conceit. . . ."

(3) The distinction between to *accuse* and to *censure* is thus stated: "To *accuse* is only to assert the guilt of another; to *censure* is to take that guilt for granted. . . . An *accusation* may be false or true, a *censure* mild or severe."

(4) For the difference between to *blame* and to *accuse*, see BLAME, v. (*Crabb: Eng. Synon.*)

çĕn'-sured (s as sh), pa. par. & a. [CENSURE, v.]

çĕn'-sur-ĕr (s as sh), s. [CENSURE, v.]

C. As subst.: The act of blaming or reproaching; censure.

çĕn'-sūs, s. [Lat. *census* from *censeo*=to rate, to value.] The act of taking the numbers and other statistics of the population of any district or country, or of the members of any class or denomination.

"... from the account of the Roman *census*, . . ."—*Bentley: Serm.*, p. 107.

1. *Israelites*: The Israelites were numbered by Moses 1490 B. C.; and by David 1017 B. C.

2. *In Ancient Rome*: The Census was established at Rome by Servius, and was held every five years in the *Campus Martius*. Every Roman citizen was obliged, on oath, to give in a statement of his own name and age, of the names and ages of his wife, children, slaves, and freedmen, if he had any. The punishment for a false return was that the person's goods should be confiscated, and he himself scourged and sold for a slave. Taxation depended upon the result of the Census.

3. The first Census in the United States was taken in 1790; the first in England and Scotland in 1801;

the first in Ireland in 1813. The custom is to take a Census in America and Great Britain every ten years. A Census was taken in Florence in 1527, in Venice 1584, France 1700, Sweden 1749. The United States Census is a very voluminous report, and forms a complete record of the progress and condition of the nation in every department of political and social economy. Its preparation is intrusted to a bureau, the chief of which is an important government official. Its preparation and publication sometimes consume the entire interval between the taking of two reports.

Metal.: A chisel used to make a dent at the exact center to form a starting-point for the drill, in drilling holes in metal. A pointed cold-chisel.

center-chuck, s.

Turning: A chuck which can be screwed on the mandrel of a lathe, and has a hardened steel core or center fixed on it, and also a projecting arm or driver.

center-drill, s.

Turning: A small drill used for making a short hole in the ends of a shaft about to be turned, for the entrance of the lathe-centers.

center-fire, s. & a. (See the compound.)

Center-fire cartridge: A cartridge in which the fulminate occupies an axial position, instead of being around the periphery of the flanged capsule.

center-gauge, s. A gauge for showing the angle to which a lathe-center should be turned, and also for accurately grinding and setting screw-cutting tools.

center-lathe, s.

1. A lathe in which the work is supported upon centers at each end; one on the end of the mandrel in the head-stock, and the other, the back-center, on the axis in the tail-stock. The latter is adjustable.

2. A pole lathe; a lathe in which the work is held by centers projecting from two posts, and is driven by a band, which passes two or three times around it. The band is fastened at its respective ends to a treadle beneath the lathe and a spring bar above it.

center-line, s.

Shipbuilding: A central, longitudinal, vertical section of the hull.

center-phonc, s.

Acoustics: The place where the speaker stands in making polysyllabic and articulate echoes. (*Weale*.)

center-phonocamptic, s.

Acoustics: The place or object which returns the voice. (*Weale*.)

center-pin, s. The pivot on which the needle oscillates in a mariner's compass.

center-punch, s.

Joinery: A small piece of steel, with a hardened point at one end, used for making a small hole or indent.

center-rail, s.

Rail Engineering: A third, or middle, rail placed between the ordinary rails of a track, and used on inclined planes in connection with wheels on the locomotive in ascending or descending the grade.

center-rush, s. *Football*: The middle man of the line of seven rushers. Also called the *snap-back*.

center-saw, s. A machine for splitting round timber into bolts, instead of riving it, for ax and pick handles, and heavy spokes. It has a sliding carriage, furnished with center head-blocks, upon which the log is placed; and is provided with a dial-plate and stops, by which the log can be spaced into stuff the desired size. The centers can be adjusted up or down, to suit the work.

center-second, s. A term applied to a watch or clock in which the second-hand is mounted on the central arbor and completes its revolution in one minute. It is more easily read than the ordinary second-hand traversing in its own small dial.

bōil, bōy; pōut, jōw1; cat, çell, chorus, çhin, bench; go, gem; thin, this; sin, aş; expect, Xenophon, exist. ph = f. -cian, -tian = şan. -tion, -sion = şhñ; -tion, -şion = zhñ. -tious, -cious, -sious = şhş. -ble, -dle, &c. = bēl, dēl.

center-valve, *s.* A device in gas-works intended to distribute the coal-gas to the purifiers.

center-velic, *s.* The center of gravity of an equivalent sail, or that single sail whose position and magnitude are such as cause it to be acted upon by the wind when the vessel is sailing, so that the motion shall be the same as that which takes place while the sails have their usual positions. (*Weale.*) It is called also *velic-point*.

center-wheel, *s.* The "third wheel" of a watch in some kinds of movements.

çĕn'-ter, **çĕn'-tre** (*tre* as *tēr*), *v. t. & i.* [**CENTER**, *s.*]

A. Transitive:

1. *Ordinary Language:*

1. *Lit.:* To place in the center.

"One foot he centered, and the other turned
Round through the vast profundity obscure."
Milton: P. L., vii. 228.

2. *Fig.:* To collect or gather at one point; to concentrate.

"He may take a range all the world over, and draw in all that wide air and circumference of sin and vice, and center it in his own breast."
South.

"But here our hopes are centered . . ."

Hemans: Stanzas on the Death of Princess Charlotte, 5.

II. Optics: To grind an optic glass so that the thickest part shall be exactly in the center.

B. Intransitive:

1. *Lit.:* To be placed or to stand in the center.

"As God in heaven
Is center, yet extends to all, so thou,
Centering receive'st from all those orbs."
Milton: P. L., ix, 109.

***II. Figuratively:**

1. To rest or repose as a body in a state of equilibrium.

"Where there is no visible truth wherein to center, error is as wide as men's fancies, and may wander to eternity."
Decay of Piety.

2. To be collected to one point, to be concentrated.

"Speak, for he can, and none so well as he,
What treasures center, what delights, in thee."
Cowper: Hope, 174.

çĕn'-tered, **çĕnt'-red** (*tered* or *tred* as *tērd*), *pa. par. or a.* [**CENTER**, *v.*]

çĕnt'-ēr-īng, **çĕnt'-rīng**, *a. & s.* [**CENTER**, *v.*]

***A. As adj.:** Tending or gravitating toward the center.

"It was attested by the visible centering of all the old prophecies in the person of Christ, . . ."
Bishop Atterbury.

B. As substantive:

1. *Building:* [**CENTERING**.]

2. *Optics:* The grinding of an optic glass, so that the thickest part will be exactly in the middle.

çĕn'-tēr-īng, *s.* [*Eng. center; -ing.*] The temporary woodwork or framing on which any arch or vaulted work is constructed. Also called a **CENTER** (*q. v.*).

***çĕn'-ter'-ī-tŷ**, *s.* [*Eng. center; -ity.*] The quality or state of being central; centrality.

"In every thing compost
Each part of th' essence its centerity
Keeps to itself, it shrinks not to a nullity."
More: Song of the Soul, pt. ii., bk. iii., c. 2, s. 20.

çĕn'-tēr-mēnt, *s.* [*Eng. center; ment.*] The center, the chief point.

"They fall at once into that state in which another person becomes to us the very gist and centerment of God's creation."
Cornhill Magazine: On Falling in Love.

çĕn-tēs'-ī-māl, *a. & s.* [*Fr. centésimal; Lat. centesimus=hundredth; centum=a hundred.*]

A. As adj.: Hundredth, by the hundred, per cent.

"This centesimal increase is not naturally strange."
Brown: Tracts, p. 40.

***B. As subst.:** A hundredth part. [**CENTESM**.]

"The neglect of a few centesimals in the side of the cube, would bring it to an equality with the cube of a foot."
Arbuthnot: On Coins.

***çĕn-tēs'-ī-māte**, *v. i.* [*Lat. centesimatus, pa. par. of centesimo=to pick out every hundredth man; centum=a hundred.*] To inflict the punishment of centesimation.

"Elsewhere we decimate, or even centesimate: here we are all children of Rhadamanthus."
De Quincey: Casuistry.

çĕn-tēs'-ī-mā-tion, *s.* [*Lat. centesimo=to pick out every hundredth person; centesimus=of or pertaining to a hundred; centum=a hundred.*]

Milit.: A mode of punishment for mutiny or wholesale desertion, in which every hundredth man was selected for punishment.

çĕn'-tĕsm, *s.* [*Lat. centesima (pars)=the hundredth (part); centum=a hundred.*] A hundredth part or fraction.

çĕn-tē-tēs, *s.* [*Gr. kentetes=one who pierces.*]

Zoöl.: A genus of mammals, the typical one of the family Centetidae. The nose is large and proboscis-like, the body covered with hair intermingled with short prickles as in the hedgehogs, but they cannot like the latter animals roll themselves into a ball. They are found in Madagascar.

çĕn-tē-tī-dæ, *s. pl.* [*From Mod. Lat. centet(es) (q. v.), and fem. pl. adj. suff. -idæ.*]

Zoöl.: A family of mammals, order Insectivora. Genera: Centetes, Solenodon, and Gymnura. Found in Madagascar, the Eastern Peninsula, and Cuba.

***çĕnt'-grāve**, *s.* [*Lat. centum=a hundred, and Ger. graf=ruler, master.*] [*REEVE.*] A lord or ruler of a hundred.

"He was (per eminentiam) called the Centgrave or Lord of the Hundred."
Selden: Laws of Engl., pt. i., ch. 25.

çĕn'-tī, *in comp.* [*Lat. centum.*] A hundred.

çĕn-tī-çĕp'-ī-toŭs, *a.* [*Lat. centiceps (genit. centicipitis)=hundred-headed; centum=a hundred; caput=a head, and Eng. suff. -ous.*] Having a hundred heads; hundred-headed. (*Smart.*)

çĕn-tif'-īd-ōŭs, *a.* [*Lat. centum=a hundred; findo=to cut, to divide, and Eng. suff. -ous.*] Divided into a hundred parts. (*Smart.*)

çĕn-tī-fō'-lī-ōŭs, *a.* [*Lat. centifolius=hundred-leaved; centum=a hundred; folium=a leaf.*] Having a hundred leaves.

çĕn-tī-grāde, *a.* [*Fr. centigrade; from Lat. centum=a hundred, and gradus=a step, a degree.*] Divided into a hundred degrees.

centigrade thermometer, *s.* A thermometer graduated on the scale of Celsius, according to which the freezing-point (=32° Fahrenheit) is marked zero, and the boiling-point (=212° Fahrenheit) 100°. [*THERMOMETER.*]

çĕn-tī-grām, **çĕn-tī-grāme**, *s.* [*Fr. centigramme: cent=a hundred; gramme=a grain; from Lat. centum=a hundred, and gramma=a grain.*] [*GRAM, GRAMME.*] A measure of weight, being the hundredth part of a gramme, and equal to 1/15433 of a grain troy, or 1/16924 of a grain avoirdupois.

çĕn-tī-lī-tēr, **çĕn-tī-lī-tre**, *s.* [*Fr. centilitre: cent=a hundred; litre=a measure of capacity or volume.*] A measure of capacity or volume, being the hundredth part of a litre, or a little more than six-tenths of a cubic inch.

çĕn-tīl'-ō-quy (*quy* as *kwy*), *s.* [*Lat. centum=a hundred; loquor=to speak.*] A work composed by Ptolemy, and so called from its consisting of a hundred aphorisms or sayings.

"Ptolemy, in his centiloquy, attributes all these symptoms which are in melancholy men to celestial influences."
Burton: Anat. of Mel., p. 189.

çĕn-tī-me, *s.* [*O. Fr. centisme; Fr. centime, from Lat. centesimus=of or pertaining to a hundred, hundredth.*] A small French copper coin, the hundredth part of a franc, or one-fifth of our cent.

çĕn-tīm'-ē-tēr, **çĕn-tī-mē-tre**, *s.* [*Fr. centimètre, from Lat. centum=hundred, and metrum=a measure.*] A French measure of length, the hundredth part of a meter, that is rather more than 3/8 of an inch.

"The Units Committee of the British Association have recommended that all specifications shall be referred to the Centimetre, the Gramme, and the Second. The system of units derived from these as the fundamental units is called the C. G. S. system, and the units of the system are called the C. G. S. units."
Everett: The C. G. S. System of Units (ed. 1875), ch. ii., p. 10.

centimeter-nine, *s.* [*METER-SEVEN.*]

***çĕn'-tī-nēl**, *s.* [*SENTINEL.*]

***çĕn-tin-er**, *s.* [*CENTENIER.*]

çĕn-tī-nōde, ***çĕn-tī-no-dŷ**, *s.* [*Fr. centinodie; O. Fr. centinodie: Lat. centum=a hundred; nodus=a knot.*] A kind of grass of the genus *Illicebrum*, a purslane-like plant; knotweed.

çĕn-tī-pēd, **çĕn-tī-pēde**, *s.* [*Fr. centipède; Lat. centipeda=hundred-footed; from centum=a hundred, and pes (genit. pedis)=a foot.*]

Zoöl.: An articulated animal having, in the popular estimation, 100 feet, but scientific men do not guarantee the number. It is opposed to a millepede, *i. e.*, an animal with 1,000 feet, a number no more guaranteed than the former. The real distinction between them is that the Centipedes have only one pair of legs from each ring or "somite" of the body, while in the Millepedes there are two to each somite, except the anterior five or six, two pairs. The Centipedes constitute the order Chilipoda, of the class Myriapoda (*q. v.*). The feet are generally from fifteen to twenty pairs, and the joints of the antennæ not less than fourteen.

***çĕn-tīp'-ē-dāl**, *a.* [*Lat. centum=a hundred; pedalis=of a foot long, from pes (genit. pedis)=a foot.*] Of a hundred feet in length.

***çĕn'-tī-pēe**, *s.* The same as **CENTPEDE** (*q. v.*).

çĕn't-nēr, *s.* [*Ger. centner=a hundred-weight; from Lat. centenarius=of or pertaining to a hundred; centum=a hundred.*]

1. A weight of one hundred pounds, used in some parts of England and Germany.

"The Liverpool corn measure of 100lb., called a centner, he proposes as the unit of measure."
Standard, March 30, 1881.

2. A weight of a drachm, divided into a hundred equal parts.

çĕn-tō, ***çĕn'-tōne**, *s.* [*Lat. cento=a garment made up of several pieces joined together; patch-work.*]

1. A composition consisting of verses or passages from different authors arranged in a new order.

"Centones are pieces of cloth of divers colors . . . Metaphorically it is a poem patched out of other poems by aid of verses."
L. Vives: Augustine's City of God, bk. 17, c. 15, note.

2. Becoming at length naturalized in our tongue, it dropped the Latin plural centones and took the English one centos in its room. (*Trench: On some Def. in our Eng. Dict.*, p. 28.)

"From different nations next the centos crowd."
Cambridge Scribleriad, bk. ii.

2. *Music:* An opera or musical composition made up out of selections from other pieces; a musical medley.

***çĕn-tōc'-ŭ-lā-tēd**, *a.* [*Lat. centum=a hundred; oculatus=having eyes, from oculus=an eye.*] Having a hundred eyes.

çĕn-tōn-īsm, *s.* [*Lat. cento (genit. centonis) and Eng. suff. -ism.*] The act or art of making up a composition from selections out of other authors; compilation.

çĕn'-tral, *a.* [*Lat. centralis=pertaining to the center, from centrum=the center.*]

1. Relating to the center, containing the center.

2. Situated in or at the center.

"Palmyra, central in the desert . . . fell."
Wordsworth: Excursion, bk. viii.

central artery, *s.*

Anat.: That which, given off by the ophthalmic, insinuates itself into the optic nerve in its passage to the retina.

central-eclipse, *s.*

Astron.: A central-eclipse is when the centers of the heavenly bodies, which are affected, exactly coincide, or are directly in a line with the spectator.

central-fire, *s. & a.*

*1. *As substantive:*

Alchemy: The fire which alchemists formerly imagined to be in the center of the earth, the fumes and vapors of which, as they supposed, made the metals and minerals.

2. *As adjective:*

Gunmaking: Constructed for the use of center-fire cartridges. [**CENTER-FIRE.**]

central forces, *s. pl.*

Mech.: The two antagonistic forces (centrifugal and centripetal) by whose united action bodies are caused to revolve round a central point.

çĕn'-tral-īsm, *s.* [*Eng. central; -ism.*] The same as centralization (*q. v.*).

***çĕn'-tral-īst**, *s.* [*Eng. central; -ist.*] One in favor of the policy of centralization.

çĕn-trāl'-ī-tŷ, *s.* [*Low Lat. centralitas; centralis=pertaining to a center; centrum=a center.*] The state or quality of being central.

"An actual centrality, though as low as next to nothing."
More: Notes upon Psychozoia, p. 354.

çĕn-trāl-īz-ā-tion, **çĕn-trāl-īz-ā-tion**, *s.* [*Eng. centraliz(e); -ation.*]

1. *Ordinary Lang.:* The act of making central.

2. *Political:* The system or policy of carrying on all Government at one central spot instead of locally. [**CENTRALISM.**]

çĕn'-tral-īze, **çĕn'-tral-īse**, *v. t.* [*Eng. central-ize.*]

1. *Gen.:* To make central, to bring to a center.

2. *Spec.:* To concentrate in some particular part, as an actual or conventional center (generally applied to the process by which the municipal or local administration of a country is overridden by the administration of the court or capital).

" . . . his attempt to centralize the power of the government."
Finlay: Greek Revolution, bk. v., ch. iv.

çĕn-trāl-lās'-sīte, *s.* [*From Gr. kenton=a sharp point, a center, and allasō=to change.*]

Min.: A white or yellowish-white pearly mineral found near Black Rock, at the Bay of Fundy. Compos.: Silica, 53.86; alumina, 1.4; magnesia, 0.16; lime, 27.92; potassa, 0.59; water, 11.42. (*Dana.*)

tate, făt, färe, amidst, whăt, fáll, father; wē, wēt hère, camēl, hēr, thère; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre. amīte. cūr. rāle, fūll: trŷ, Sŷrian. æ, œ = ē; ey = ā. qu = kw

çên-tral-lý, *adv.* [Eng. *central*: -ly.] As regards the center; in a central manner.

çên-trăn-thũs, *s.* [Gr. *kentron*=a spur; *anthos*=a flower.]

Bot.: Spurred Valerian, a small genus of plants of the order Valerianaceæ, much used for borders in gardens. *Centranthus ruber* grows in a number of places apparently but not really wild. It comes from the south of Europe and north of Africa.

çên-trā-tion, *s.* [Lat. *centrum*=a center.] A tendency to approach the center.

"What needs that numerous tlos'd *centration*
Like wastefull sand ystost with boisterous inunda-
tion?" *More Song of the Soul.*

çên-tric, ***çên-trick**, **çên-trĩ-cal**, *a. & s.* [Eng. *centr(e)*, and suff. -ic, -ical.]

A. As adj.: Placed in the center; central (*lit. & fig.*).

"Some, that have deeper digg'd in mine than I,
Say where his *centrick* happiness doth lie." *Donne.*

B. As subst.: A line drawn in a circle.

"How gird the sphere
With *centric* and *eccentric* scribbled o'er."
Milton: P. L., viii. 83.

çên-trĩ-cal-lý, *adv.* [Eng. *central*; -ly.] Centrally, in the center.

çên-trĩ-cal-næss, *s.* [Eng. *central*; -ness.] The state or quality of being central.]

çên-trĩç-i-tý, *s.* [Eng. *centric*; -ity.] The same as CENTRICALNESS.

çên-trĩf-u-gal, *a.* [Fr. *centrifuge*, from Lat. *centrum*=the center, and *fugio*=to fly from.]

1. *Mech.*: Having a tendency to or causing to recede from the center. [CENTRIFUGAL FORCE.]

"They described an hyperbola, by changing the centripetal into a *centrifugal* force."—*Cheyne.*

†2. *Botany*:

(1) An epithet applied to that kind of inflorescence, which, like the cyme, flowers first at the end and last at the base; called also *Determinate*, *Definite*, or *Terminal* inflorescence. [CENTRIFUGAL INFLORESCENCE.]

"The expansion of the flowers is in this case *centrifugal*, that is, from apex to base, or from center to circumference."—*Balfour: Botany* (1855), § 332.

(2) Having the radicle turned toward the sides of the fruits.

centrifugal drill, *s.* A drill having a fly-wheel upon the stock, to maintain and steady the motion against the effect of temporary impediments.

centrifugal filter, *s.* A filter the cylinder of which has a porous or foraminous periphery, and is very rapidly rotated on its vertical axis, so as to drive off by centrifugal force the liquid with which the substance contained in the cylinder is saturated.

centrifugal force, *s.*

Nat. Phil.: The force which impels a revolving body from the center to the circumference of its orbit.

¶ Prof. Airy objects to the use of the term *centrifugal force*, saying that there is no force in operation. He proposes to substitute the expression "centrifugal tendency." (*Prof. Airy: Pop. Astron.*, 6th ed., pp. 241-2.)

centrifugal gun, *s.*

Mil.: A form of machine-cannon in which balls are driven tangentially from a chambered disk rotating at great speed.

centrifugal inflorescence, *s.*

Bot.: An inflorescence in which the terminal flower opens first and the lateral ones successively afterward. (*Figuier: Vegetable World.*)

centrifugal machine, *s.*

1. *Hydraul.*: A machine contrived to raise water by means of centrifugal force, combined with the pressure of the atmosphere.

2. *Manufac.*: A machine for drying yarn, cloth, clothes, sugar, &c., by centrifugal action. The fiber or other material is placed in a hollow cylinder with a reticulated periphery or wire gauze, and, being rotated at a rate of from 1,000 to 2,000 revolutions per minute, the water flies off by the centrifugal action, and is collected by the inclosing cylinder, down which it trickles to a discharge-pipe. It is also found useful in removing the must from the grape after crushing. (*Knight.*)

Centrifugal Inflorescence—Geranium.

centrifugal pump, *s.* The same as CENTRIFUGAL MACHINE, 1. *Hydraul.*

centrifugal tendency, *s.* A compound term designed to express the same idea as the more common one, *centrifugal force* (q. v.).

"A circular hoop when set to spinning becomes more or less elliptic, owing to this *centrifugal tendency*."—*Prof. Airy: Pop. Astron.*, 6th ed., pp. 241-2.

"As the *centrifugal tendency* is powerfully in operation at the equator, but not at all at the poles, the attraction of the earth on bodies at its poles is necessarily greater than on bodies at its equator. Another cause tends to produce the same result, but that the distance between the poles and the center of the earth is less than that between the equator and that center."—*Prof. Airy: Pop. Astron.*, 6th ed., pp. 240-2.

çên-trĩf-u-gal-lý, *adv.* [Eng. *centrifugal*; -ly.]

1. *Lit.*: In a centrifugal manner.

2. *Fig.*: Spreading outward.

"The British Association then, as a whole, faces physical nature on all sides and pushes knowledge *centrifugally* outward."—*Tyndall: Frag. of Science*, 3d ed., vi. 110.

çên-trĩp-ě-tal, *a.* [In Fr. *centripète*, from Lat. *centrum*=center, and *peto*=to seek.]

1. *Mech.*: Having a tendency to or causing to approach the center; having gravity. It is the opposite of centrifugal (q. v.).

"In the same manner the centrifugal force is not a distinct force in a strict sense, but only a certain result of the first law of motion, measured by the portion of *centripetal* force which counteracts it."—*Whewell: History of Scientific Ideas*, i. 285.

2. *Botany*:

(1) An epithet for that kind of inflorescence which, like the spike or capitulum, flowers first at the base and last at the end or center; called also *Indeterminate*, *Indefinite*, or *Axillary* inflorescence. [CENTRIPETAL INFLORESCENCE.]

"The expansion of the flowers is thus *centripetal*, that is, from base to apex, or from circumference to center." *Balfour: Botany* (1855), § 331.

(2) Having the radicle turned toward the axis of the fruit.

3. *Osteology*: Progressing by changes from the exterior toward the center, as the *centripetal* calcification of a bone. (*Owen.*)

centripetal force, *s.*

Nat. Phil.: A so-called force which tends to make a body move toward a center.

centripetal inflorescence, *s.*

Bot.: An inflorescence in which the lowest flowers open first and the main stem continues to elongate, developing fresh flowers. (*Figuier: Veg. World.*)

centripetal press, *s.* A mechanical contrivance for pressing inwardly on a radial line from all directions in the common plane. (*Knight.*)

centripetal pump, *s.*

A pump in which the water is gathered by revolving blades or arms, and drawn to the axis from whence the discharge tube rises. (*Knight.*)

centripetal tendency, *s.*

Nat. Phil.: A name proposed by Prof. Airy to designate what is now commonly called "centripetal force," but properly speaking is not a force but a tendency. [CENTRIPETAL FORCE.] Centripetal and centrifugal tendencies make the planets revolve around the sun in their present elliptic orbits. If centripetal action ceased, they would fly off into space; if centrifugal action failed longer to operate, they would move with continually augmenting velocity toward the sun, against which they would ultimately impinge, with the supposed effect that everything in them combustible would be burnt.

çên-trĩp-ě-tal-lý, *adv.* [Eng. *centripetal*; -ly.] In a centripetal manner; by centripetal force.

***çên-trĩp-ě-ten-çý**, *s.* [Lat. *centrum*=center; *petens* (genit. *petentis*), pr. par. of *peto*=to seek.] The quality of having a tendency to approach the center. (*Month. Rev.*)

çên-trĩs-cũs, *s.* [Lat. *centriscus*; Gr. *kentris-kos*.]

Ichthy.: A genus of fishes of the family *Fistulariidae* or *Aulostomidae*, having the head lengthened into a very narrow snout, mouth without teeth, gills broad and flat, body compressed, belly earinate, ventral fins united. (*Craig.*) *Centriscus scolopax* is the Trumpet-fish or Sea-snipe, called in Cornwall the Bellows-fish. It is about five inches long. Its habitat is in the Mediterranean.

***çên-trĩ-bār-ic**, *a.* [Gr. *kentrobārīka*, the title of a book by Archimedes on the finding the center of gravity; from *kentrobārēs*=gravitating toward

the center; *kentron*=center, *barcō*=weight, gravity.] Relating to the center of gravity, or to the process of finding it.

centrobaric method, *s.*

Math.: A process invented for measuring or determining the quantity of any surface or solid, by considering it as generated by motion, and multiplying the generating line or surface into the path of its center of gravity. It is sometimes called the *Theorem of Pappus*, and also, but incorrectly, *Guldinus's properties*.

çên-trĩ-çēr'-cũs, *s.* [Gr. *kentron*=center, and *kerkos*=tail.] A genus of birds of the grouse family, the typical and only species of which is *C. urophasianus*, or sage-cock.

çên-trĩ-clĩn'-ĩ-ũm, *s.* [From Gr. *kentron*=a sharp point, a center; *klinē*=a couch, a bed.]

Bot.: A genus of composite plants, with two-lipped corollas. The four known species are herbs or small shrubs found in the Peruvian Andes at an elevation of 6,000 to 8,000 feet. They have alternate leaves, stalked, toothed, or entire, and covered beneath, as well as the stems, with a white tomentum. The flower-heads are purple, about an inch in diameter; the ray florets are few and female. *Centroclinium adpressum* and *C. reflexum* are cultivated, and produce rose-colored flowers, smelling like hawthorn. (*Treasury of Botany.*)

çên-trĩ-lē'-pĩs, *s.* [Gr. *kentron*=a spur; *lepis*=a stalk.]

Bot.: A genus of Desvauxiaceæ, containing a few small tufted sedge-like herbs from Australia and Tasmania. Leaves setaceous, all radical; scapes short and terminated by a simple spike; glumes two, membranous; stamen one; ovaries two to twelve, becoming utricles in fruit. (*Treas. of Bot.*)

çên-trĩ-lĩn'-ě-ād, *s.* [Lat. *centrum*=center; *linea*=a line.] An instrument for drawing lines converging to or passing through a point.

çên-trĩ-lĩn'-ě-āl, *a. & s.* [Lat. *centrum*=center; *linealis*=pertaining to a line, from *linea*=a line.]

A. As adj.: An epithet applied to lines converging to or meeting in a point or center.

B. As substantive: A centrolinead.

çên-trĩ-lō'-bĩ-ũm, *s.* [Gr. *kentron*=a spur; *lobos*=a hood, a capsule.]

Bot.: A genus of leguminous trees from Brazil, Guiana, and Venezuela. The leaves are a foot or more in length, and clad with a rusty pubescence. The pod is the most remarkable part of the plant. It is like the fruit of the common maple. It is about nine inches in length, the lower or seed-bearing portion globular, and clad with long, straight prickles; the upper or winged portion thin, papery in texture, about 2½ inches broad, and bearing on its back a long, straight, spurred spine, which is the hardened style. *Centrolobium paridense* furnishes one of the most esteemed timbers of the Orinoco; its color is bright orange while fresh, fading to brown after exposure.

çên-trĩl'-ō-phũs, *s.* [Gr. *kentron*=a goad, a spur; *lōphos*=a crest.]

Ichthy.: A genus of fishes of the family *Coryphæonidae*, with elongated bodies, the dorsal fin commencing evenly with the pectoral; ventral fin small; anal fin half as long as the dorsal; vent central; lateral line prominent. *Centrolophus morio* is the "Black fish." It is intensely black above, especially on the fins. It is of a paler color beneath.

***çên-trĩ-nēl**, *s.* [A corrupt form of *centinel* (q. v.).] A sentinel.

çên-trĩ-nĩ-a, *s.* [Gr. *kentron*=a spur, from the anthers being furnished with a long spur.]

Bot.: A genus of plants of the order *Melanostomaceæ*, having large purple flowers.

çên-trĩ-nōt'-ĩ-næ, *s. pl.* [From Mod. Lat. *centronotus*, the typical genus; and fem. pl. adj. suff. -inæ.]

Ichthy.: A sub-family of fishes, of which *Centronotus* is the type, belonging to the family *Zeidae* of Swainson, or to the *Scomberidae*.

çên-trĩ-nō-tũs, *s.* [Gr. *kentron*=a goad, a spur; *notos*=the back; so called from the spur-like prickle pointing forward on the back.]

Ichthy.: A genus of fishes, family *Zeidae*, with oblong-fusiform bodies; dorsal and anal fins of equal length and falcated; caudal fin large and forked; scales minute.

çên-trĩ-pō'-gõn, *s.* [Gr. *kentron*=a spur; *pōgōn*=a beard.]

Bot.: A genus of *Lobeliaceæ*, natives of tropical America. All the plants are under-shrubs with irregular flowers on long axillary stalks. It is alleged that the succulent fruit of *Centropogon* is eatable (*Lindley*), though the *Lobeliaceæ* are generally dangerous.

çên-trô-pô-ma, **çên-trô-pô-müs**, s. [Gr. *kentron*=a goad, a spur; and *pôma*=a lid, a cover.] *Ichthy.*: A genus of fishes belonging to the Percidæ or Perch family. *Centropomus undecimalis*, the specific name of which refers to the fact that it had eleven rays to the posterior dorsal fin, frequents the mouth of some South American rivers. It is called by the English-speaking residents the Seapike, and is eaten.

çên-trô-pris-têş, s. [Gr. *kentron*=a spur, and *pristês*=a saw, from its saw-like spines.]

Ichthy.: A genus of fishes belonging to the Percidæ or Perch family. *Centropistes nigricans*, one of the species called Black Perch or Black Bass, is abundant in the rivers of this country, and is esteemed for the table.

çên-trô-pûş, s. [Gr. *kentron*=a spur; *pous*=a foot.]

Ornith.: A genus of birds belonging to the Cocyziæ or Hooked-billed Cuckoos.

çên-trô-sê-lê-nî-a, s. [Gr. *kentron*=a spur; *sêlênê*=the moon.]

Bot.: A genus of Gesneraceæ, from British Guiana. It consists of but a single plant, which has a short, creeping stem, subcordate, petiolate leaves, and solitary axillary peduncles. The calyx is five-parted, with serrate segments. It is distinguished from *Nematanthus*, to which it is allied, by the spur of the flower, coupled with the habit and the toothed segments of the calyx. (*Treas. of Botany.*)

çên-trô-sê-ma, s. [Gr. *kentron*=a spur; *sêma*=a mark, a device.]

Bot.: A genus of leguminous prostrate or twining perennial plants, distinguished by having on the back and near the base of the standard a short spur. The large and elegant pea-like flowers are white, violet, rose, or blue in color, single or in axillary racemes. The pods are very narrow, compressed, thickened at both sides, and terminating in a long point; in some species they are eight inches in length. Upwards of twenty species, all peculiar to warmer portions of America, are known.

çên-trûm, s. [From Mod. Lat. *centrum*; Gr. *kentron*=a horse-goad, . . . the stationary part of a pair of compasses.]

Anat. & Zool.: A center, applied specially to the "bodies" of vertebratæ. (*Huxley.*) The central portion or "body" of a vertebra. (*Nicholson.*)

***çên-trÿ**, s. [SENTRY.]

"The thoughtless wits shall frequent forfeits pay,
Who 'gainst the centry's box discharge their tea,"
Gay.

çên-tûm-vîr, (pl. **çên-tûm-vîr-î**), s. [An adaptation of Lat. *centumviri*: *centum*=a hundred; *vîr*, nom. pl. of *vîr*=a man.]

Rom. Antiq.: One of the centumviri or judges appointed by the prætor to decide common causes amongst the Romans. They were selected from the most learned in the law, and were elected from the thirty-five tribes, three out of each tribe, so that their number really was one hundred and five, though, for the sake of the round number, called *centumviri*. They were afterward increased in number to one hundred and eighty, yet still retained their original name.

çên-tûm-vîr-âl, a. [Lat. *centumviralis*=pertaining to the centumviri.] Pertaining to the centumviri or a centumvir. (*Ash.*)

çên-tûm-vîr-ate, s. [Fr. *centumvirat*; Lat. *centumviratus*.] The office or position of a centumvir.

çên-tûn-cu-lûş, s. [Lat.]

Bot.: A genus of plants, order Primulacæ. *Centunculus minimus* is the Bastard Pimpernel, an annual weed with alternate ovate leaves and sessile flowers. A book-name for it is the Small Chaff-weed.

çên-tu-ple, a. [Fr. *centuple*; Lat. *centuplex*=a hundred-fold: *centum*=a hundred; *plexus*, pa. par. of *plecto*=to twist, to weave.] A hundred-fold. (*Ben Jonson.*)

çên-tu-ple, v. t. [CENTUPLE, a.] To multiply or increase a hundred-fold.

"Then would he centuple thy former store,
And make thee far more happy than before,"
Sandys: Paraphr. of Job.

çên-tû-plîc-ate, v. t. [Lat. *centuplicatus*, pa. par. of *centuplico*=to make a hundred-fold: *centum*=a hundred; *plîco*=to weave, to twist.] To make a hundred-fold, to repeat a hundred times.

çên-tû-plî-câ-têd, pa. par. or a. [CENTUPLICATE, v.] Made a hundred-fold, repeated a hundred times.

"I perform'd the civilities you enjoyn'd me to your friends here, who return you the like centuplicated, . . ."
—*Howell*, bk. iv., Let. 2.

çên-tû-plî-câ-tîng, pr. par., a. & s. [CENTUPLICATE, v.]

A. & B. *As pr. par. & partic. adj.*: (See the verb.)

C. *As subst.*: The act of multiplying a hundred-fold.

çên-tür-î-âl, a. [Lat. *centurialis*=pertaining to a century; *centuria*=a century; *centum*=a hundred.] Pertaining to a century or a hundred. (*Edin. Cycl.*)

"When the third centurial jubilee of New England shall come, who of us will then be living to participate in the general joy?"—*J. Woodbridge.*

***çên-tür-î-an**, s. [Eng. *century*; -an.] A centurion. (See example under *centenier*.)

***çên-tür-î-ate**, v. t. [Lat. *centuriatus*, pa. par. of *centurio*.] To divide into centuries or hundreds. (*Coles.*)

çên-tür-î-ate, a. [Lat. *centuriatus*, pa. par. of *centurio*.] Pertaining to, or divided into, centuries or hundreds.

"The centuriate assemblies."—*Holland: Livy*, bk. vi., ch. xli.

***çên-tür-î-â-tôr**, s. [Lat. *centurio*=to divide into centuries or hundreds.] A name given to historians who distinguish times by centuries, which is generally the method of ecclesiastical history. Used specially of the Magdeburg centuriators—viz., Matthias, Flacius, John Wigand, Matthew Judex, Basil Faber, Andrew Corvinus, Thomas Holthunters, and others, who between A. D. 1559 and 1574 published a Church History in thirteen volumes, each volume comprising a century.

"The centuriators of Magdeburg were the first that discovered this grand imposture."—*Ayliffe: Parergon.*

***çên-tu-rîe**, ***çên-tür-ÿ** (1), s. [CENTAURY.]
"Of lauriol, century and fumytere,"
Chaucer: C. T., 16, 449.

çên-tür-î-ôn, s. [Lat. *centurio*, from *centum*=a hundred.]

Roman Antiq.: A Roman military officer commanding a century or a company of infantry, consisting of one hundred men. He answered to our captain. (*Matt. viii. 5.*)

***çên-tu-rîst**, s. [Eng. *centur(y)*; -ist.] The same as CENTURIATOR (q. v.).

"You cannot justly join Osiander and the centurists with the peathens."—*Sheldon: Miracles of Antichrist*, p. 105.

çên-tu-rÿ (2), s. [Lat. *centuria*, from *centum*=a hundred.]

I. *Ordinary Language*:

1. *Literally*:

* (1) An aggregate number of a hundred of things.

"And on it said a century of prayers,
Such as I can, twice o'er, I'll weep and sigh."
Shakesp.: Cymbeline, iv. 2.

(2) A period of a hundred years. This is the uniformly accepted sense of the word now. Modern chronology among Christian nations centers at the birth of Christ, and the centuries are numbered according to their order either before or after that era. As the *First* or the *Nineteenth Century* A. D.; the *First* or the *Third Century* B. C.

" . . . though our joys, after some centuries of years, may seem to have grown older . . ."
—*Boyle.*

2. *Fig.*: Any exceedingly long period of time. (*Colloquial.*)

"And fair unblemish'd centuries elaps'd,
When not a Roman bled but in the field."
Thomson: Liberty, pt. iii.

*II. *Roman Antiq.*:

1. A division of the Roman tribes for the election of magistrates, the passing of laws, &c., on which the voting was by centuries.

2. A company of cavalry; a sub-division in the Roman army.

¶ *Centuries of Magdeburg*: An ecclesiastical history arranged in thirteen centuries, compiled by a great number of Protestants at Magdeburg. Bacon also wrote a work on natural history, under the title of *Ten Centuries of Natural History*, it being divided into ten books, each containing one hundred short articles.

century-plant, s. The American Aloe, *Aloe americanus*, so called from its being formerly supposed to flower only once in each century.

***ceol**, s. [A. S. *ceol*=a ship.] An initial in the names of men, which signifies a ship or vessel, such as those that the Saxons landed in. (*Gibson.*)

çê-pa, s. [Lat.]

Bot.: The common Onion, *Allium cepa*.

çê-pêv-ôr-ous, a. [Lat. *cepa*=an onion; *voro*=to devour.] Feeding upon onions.

çêph-a-êl-îs, s. [Gr. *kephalê*=head, from the flowers being united in heads.]

Bot.: A genus of plants of the order Cinchonaceæ, one of the species of which, *Cephaelis ipecacuanha*,

a little creeping-rooted Brazilian plant, yields the well-known emetic of that name. *C. ruelliaefolia* is poisonous, and is used to kill rats and mice.

çêph-a-lâ-cân-thûş, s. [Gr. *kephalê*=head; *akantha*=a spine.]

Ichthy.: A genus of mail-cheeked fishes belonging to the Triglidae or Gurnard family.

çêph-âl-âl-gîc, a. & s. [Lat. *cephalalgicus*; Gr. *kephalalgikos*: *kephalê*=head; *algeô*=to pain, to suffer pain.]

A. *As adj.*: Affected with, suffering from, or producing headache.

B. *As subst.*: A remedy for the headache.

" . . . cephalalgics, icterics, apoplegmatics, acoustics, as their several cases required."—*Swift: Gulliver's Travels.*

çêph-âl-âl-gÿ (*Eng.*), **çêph-âl-âl-gî-a** (*Mod. Lat.*), s. [Fr. *céphalalgie*; Gr. *kephalalgia*=headache: *kephalê*=head; *algeô*=to suffer pain.]

Med.: The pathological name for the headache.

çêph-âl-ân-thêr-a, s. [Gr. *kephalê*=head; *anthera*=an anther.]

Bot.: A genus of Orchids, three species of which are common in this country, *Cephalanthera pallens*, *ensifolia* and *rubra*. They have nearly regular white or red half-closed flowers with a saccate hypodril.

çêph-âl-ân-thî-ûm, s. [Gr. *kephalê*=head; *anthos*=a flower.]

Bot.: The head or capitate inflorescence of a composite flower. (*Brande.*)

çêph-âl-ân-thûş, s. [Gr. *kephalê*=head; *anthos*=a flower.]

Bot.: A genus of plants, order Cinchonaceæ, called in this country Button-wood. *Cephalanthus occidentalis* is a bushy shrub with leaves opposite, or sometimes three in a whorl, and yellowish-white flowers in round heads of the size of a marble. It is common in swamps from the Carolinas to Canada. The inner bark of the root is an agreeable bitter expectorant, and is often taken as a remedy in obstinate coughs.

çêph-âl-âr-î-a, s. [Gr. *kephalê*=the head, from the form of the groups of the flowers, and Lat. neut. pl. adj. suff. -aria.]

Bot.: A genus of plants belonging to the Teazel-worts. There are about twenty species known, to be found in Middle Europe, North Asia, and the Cape of Good Hope. They are mostly perennial herbs, a few only being annual. The flowers are white, yellow, or lilac.

çêph-âl-âş-pî-dæ, s. pl. [From Mod. Lat. *cephalaspis* (q. v.), and fem. pl. adj. suff. -idæ.]

Palæont.: A family of fossil fishes, order Ganoidæ, sub-order Ostracostei, or Placodermis. They commence in the Upper Silurian, but do not attain importance till the Devonian period. [CEPHALASPIES.]

çêph-âl-âş-pîş, s. [Gr. *kephalê*=head; *aspis*=a shield.]

Palæont.: A genus of ganoid fossil fishes found in the Old Red Sandstone formation. The cephalic shield is prolonged behind into three acute projections, the two lateral ones produced backward so as to make the buckler resemble "a saddler's knife," i. e., the instrument with which leather merchants and shoemakers cut their leather. The species are sometimes called Bucklerheads. The most common one is *Cephalaspis Lyellii*.

çêph-âl-âte, s. [Gr. *kephalê*=head.]

Zoöl.: A mollusk having a head.

çêph-âl-ê-mÿ-î-a, s. [Gr. *kephalê*=head; *myia*=a fly.]

Entom.: A genus of dipterous insects of the family Eristidæ, or Gadflies.

çêph-âl-îc, ***çêph-âl-îck**, a. & s. [Fr. *céphalique*; Gr. *kephalikos*=pertaining to the head; *kephalê*=the head.]

A. *As adj.*: Pertaining to the head; useful as a remedy for pain in the head.

"Cephalic medicines are all such as attenuate the blood, so as to make it circulate easily through the capillary vessels of the brain."—*Arbuthnot: On Alim.*

B. *As subst.*: A medicine or remedy for pains in the head.

cephalic index, s.

Anat., Ethnol., &c.: The ratio of the transverse to the longitudinal diameter of the skull. (*Ros-siter.*)

cephalic snuff, s.

Pharm.: The name of an errhine powder, the chief ingredient in which is asarabacca. (*Mayne.*)

cephalic vein, s. A vein running along the arm, so called because the ancients used to open it for disorders of the head. (*Dunghlison.*)

çêph-âl-îş-tîc, a. [Gr. *kephalê*=the head.] Belonging to or situated in the head.

čěph-ál-i'-tis, s. [Gr. *kephalē*=the head, and med. suff. *-itis* (q. v.).]

Med.: The name given by Linnæus to inflammation of the brain or its investing membranes.

čěph-ál-i-zā'-tion, s. [Gr. *kephalē*=the head, formed as if from a verb *cephalize*.]

Biol.: A word first used by J. Dana to indicate the tendency in certain animals to have their forces localized in or near the head.

"This centralization is literally a *cephalization* of the forces. In the higher groups, the larger part of the whole structure is centered in the head."—*Dana: Crustacea*, pt. ii., p. 1,397.

čěph'-ál-ō, in comp. [Gr. *kephalē*=head.] Pertaining to the brain.

cephalo-branchiata, s. pl.

Zoöl.: The same as TUBICOLA (q. v.).

cephalo-branchiate, a.

Zoöl.: Having branchiæ (gills) upon the head. Example, the Serpulæ in the class Annelida.

cephalo-extractor, s.

Obstetrics: An instrument to extract the fœtus by the head.

čěph-ál'-ōd-ine, a. [From Gr. *kephalē*=a head, *d* euphonic, and Eng. suff. *-ine*.] Forming a head. (*R. Brown*, 1874.)

***čěph-ál-ōg'-raph-ŷ**, s. [Gr. *kephalē*=head; *logos*=a discourse; *graphō*=to write.]

Anat.: A description of the head.

čěph'-ál-ōid, a. [Gr. *kephalē*=head; *eidos*=form.] Head-shaped.

čěph-ál-ōl'-ō-gŷ, s. [Gr. *kephalē*=head; and *logos*=a treatise.]

Anat.: A treatise on the head.

čěph-ál-ōm'-ē-tēr, s. [From Gr. *kephalē*=the head, and *metron*=a measure.] An instrument for measuring the size of the fœtal head during parturition.

čěph-ál-ōph'-ōr-a, s. pl. [From Gr. *kephalē*=the head, and *phoreō*=to bear.]

Zoöl.: A sub-class of mollusca containing those which possess a distinct head. They are called also Encephala.

čěph-ál-ōph'-ōr-ous, a. [From Mod. Lat. *cephalophor(a)*, and Eng. suff. *-ous*.] Pertaining to or of the nature of cephalophora.

čěph-ál'-ō-phūs, s. [Gr. *kephalē*=the head, and *lophos*=crest.]

Zoöl.: A genus of Antelopes, peculiar to tropical or southern Africa. The males have horns which are short, straight, simple cones, slanting backward, and a long tuft of hair (whence the name) directed backward behind the ears. They are known as Bush-bucks and there are several species, the smallest, the Pigmy Bush-buck, being no bigger than a rabbit.

čěph-ál-ōp'-ōd-a (*Lat.*), **čěph'-ál-ō-pōds** (*Eng.*), s. [Fr. *céphalopode*, from Gr. *kephalē*=head, and *pous*, genit. *podos*=a foot.]

1. *Zoöl.*: A class of mollusks, characterized by a distinct head, surrounded by a circle of long arms or tentacles, used for crawling and seizing objects. It includes the Argonaut, Octopus, Cuttle-fish, &c., with the fossil Belemnites and Ammonites. They are furnished with two large eyes, and mostly with an internal shell. They swim with the head backward. The Nautilus and Spirula form the living types of hundreds of species which have become extinct, and the remains of which are found in great abundance in secondary strata; they occur also in the Palæozoic formations. [AMMONITE.] The Cephalopoda are divided into two orders: Dibranchiata, containing those which have two branchiæ only, and Tetrabranchiata, or those which have four branchiæ.

2. *Palæont.*: The order Tetrabranchiata comes first in time, appearing in the Lower Silurian rocks, attaining its maximum in Palæozoic times, and decreasing through Mesozoic and Cainozoic periods till now its solitary representative is the genus Nautilus. The order Dibranchiata began with Mesozoic epoch and has since increased, reaching its maximum in the present day. (*Nicholson*.)

čěph-ál-ō-pōde, s. [Fr. *céphalopode*, from Gr. *kephalē*=head, and *pous*=a foot.]

Zoöl.: A mollusk of the order Cephalopoda.

čěph-ál-ō-pōd'-ic, a. [Eng. *cephalopod*, and suff. *-ic*.] Pertaining to or of the nature of cephalopods.

čěph-ál-ōp'-ō-dous, a. [Eng. *cephalopod*, and suff. *-ous*.] The same as CEPHALOPODIC.

čěph-ál-ōp'-tēr-a, s. [Gr. *kephalē*=head, and *pteron*=a feather, a wing.]

Ichthy.: A genus of fishes, the typical one of the family Cephalopteridæ (q. v.). *Cephaloptera giorna* is large in size. It occurs in the Mediterranean.

čěph-ál-ōp-tēr'-i-dæ, s. pl. [From Mod. Lat. *cephalopter(a)* (q. v.), and fem. pl. adj. suff. *-idæ*.]

Ichthy.: A family of fishes, sub-order Plagiostomata. The jaws have many small teeth and the tail a long barbed spine. The head looks horned from its having two small projecting fins; hence the name Cephaloptera.

čěph-ál-ōp'-tēr-ūs, s. [CEPHALOPTERA.]

Ornith.: A genus of the Coraciinæ or Fruit-crows, family Corvidæ, having an enlarged crest of feathers on the head, which advances in front and overshadows the bill. *Cephalopterus ornatus* is the Umbrella-bird of Brazil.

čěph'-ál-ōt, s. [Gr. *kephalē*=the head.] The same as *cerebrot* (q. v.).

čěph-ál-ō-tā'-čě-æ, s. pl. [Mod. Lat. *cephalot(us)*, and Lat. fem. pl. adj. suff. *-aceæ*.]

Bot.: The Australian Pitcher-plant, *Cephalotus follicularis*, a curious herb, with radical leaves, which is a plant of very doubtful affinity, has been considered provisionally as a distinct family under this title. It has a very short or contracted stem, with spoon-shaped stalked leaves, among which are mingled small pitcher-like bodies, places on short stout stalks, and closed at the top like the true pitcher-plants (*Nepenthes*). These pitchers are of a green color, spotted with purple or brown, and provided with hairs.

čěph-ál-ō-tāx'-ūs, s. [Gr. *kephalē*=a head (referring to the clusters of the male flowers); Lat. *taxis*=a yew.]

Bot.: A genus of Coniferous plants, belonging to the family Taxaceæ. They are nearly allied to the *Taxus* or Yew in general habit, foliage, and essential characters. There are four or five species known, all from Japan or North China. One, *Cephalotaxis Fortunei*, is frequently found in our collections of Conifers.

čěph-ál-ō-tēs s. [Gr. *kephalē*=a head, *ous*, genit. *ōtos*=an ear.]

Zoöl.: A genus of mammiferous animals, natural order Cheiroptera, with conical head, ears short, and tail but little apparent.

čěph-ál-ō-thōr'-āx, s. [Gr. *kephalē*=head; *thōrax*=chest.]

Entom. & Zoöl.: The name given to the first segment of the Arachnida and Crustaceæ, consisting of the head and chest united.

čěph'-ál-ō-tōme, s. [Gr. *kephalē*=head, and *tomos*=cutting.]

Surg.: An instrument for cutting into the fœtal head, to assist its forcible contraction and facilitate delivery.

čěph-ál-ōt'-ōm-ŷ, s. [Gr. *kephalē*=head, *tomē*=a cutting, *temnō*=to cut.]

1. *Anat.*: The dissection of the head.

2. *Midwifery*: The removal of the brain of a child impacted in the pelvis.

čěph'-ál-ō-tribe, s. [Gr. *kephalē*=head, *tribō*=to rub away, to crush.] An obstetrical instrument used in cephalotomy.

čěph-ál-ōt'-rī-chūm, s. [Gr. *kephalē*=the head; *thrix*, genit. *trichos*=hair.]

Bot.: A genus of Dematiæ (hyphomycetous Fungi) *Cephalotrichum curtum* is an extremely minute plant growing upon the leaves of sedges, with scattered, short, brown, erect filaments, bearing somewhat globular heads composed of tufts of forked or ternate branches, with one or two short, acute branchlets, slightly scabrous, bearing smooth spores. (*Griffith & Henfrey*)

čěph-ál-ō-tūs, s. [Gr. *kephalē*=a head.]

Bot.: A genus of very singular dwarf pitcher-plants, of which only one species is known, *Cephalotus follicularis*, a native of swampy places in King George's Sound. [CEPHALOTACEÆ.]

čěph'-ál-ōus, a. [Gr. *kephalē*=head; Eng. suff. *-ous*.]

Zoöl.: Having a head, applied principally to a division of Mollusks, the Cephalata, which includes the Univalves, &c. (*Dana*.)

čěph'-ál-ūs, s. [Gr. *kephalē*=the head.]

1. *Ichthy.*: A genus of Cod-fishes (Gadidæ), in which the head is remarkably large, depressed, and broad.

2. *Entom.*: A genus of dipterous insects.

čě'-pheūs, s. [Named after the husband of Cassiopeia and father of Andromeda.]

Astron.: A constellation in the northern hemisphere, lying between Cassiopeia and Draco.

čě'-phūs, s. [From Gr. *kēphēn*=a drone.]

Entom.: A genus of Hymenopterous insects, of the family Xiphiidæ. *Cephus pygmaeus* is common in flowers, particularly buttercups.

čě'-pō-la, s. [Lat.=a small onion, a chive.]

Ichthy.: A genus of anguilliform fishes, order

Thoracica, having the head roundish, compressed, teeth curved; gill-membrane with six rays; body ensiform and naked.

čě-pōl'-i-dæ, s. pl. [From Mod. Lat. *cepola*, and fem. pl. adj. suff. *-idæ*.]

Ichthy.: Ribbon-fishes, a family of fishes in which the body is very long, compressed, and ribbon-like. Genera *Cepola*, *Gymnetrus*, *Trichiurus*, &c.

***čěr-ā'-čěous**, a. [Lat. *cer(a)*=wax, and Eng. suff. *-aceous*.] Pertaining to or made of wax; like wax in appearance. Specially in botany. (*Brande*.)

čěr-ā'-dī-a, s. [From Gr. *kēros*=bees-wax, and *adēn*=a gland.]

Bot.: *Ceradia furcata*, a half succulent plant from the most barren part of southwest Africa, yields African Bdellium. It is a brittle, resinoid substance, fragrant when burned, and must not be confounded with ordinary Bdellium.

čěr-ā'-gō, s. [Lat. *cera*=wax. Second element in the compound unknown.] Bee-bread, a substance consisting principally of the pollen of flowers, and used by bees for food.

čěr'-a-in, **čěr'-a-ine**, s. [From Lat. *cera*=wax, and Eng., &c., suff. *-n*, *-ine* (*Chem.*) (q. v.).]

Chem.: The part of beeswax which is sparingly soluble in alcohol and not saponified by potash.

čě-rām-bŷ'-čī-dæ, s. pl. [Lat. *cerambyx*=a kind of beetle; and suff. *-idæ*.]

Entom.: A family of coleopterous insects, which have the head large and vertical, the jaws sharp and strong, the tarsi prehensile, and the thorax nearly as broad as the body. They live upon solid or decayed wood, both in their larva and perfect states.

čě-rām-bŷx, s. [Lat. *cerambyx*; from Gr. *keras*=a horn, and *ambyx*=a cup, from the form of the joints of the antennæ.]

Entom.: A genus of Coleoptera, or beetles, the typical one of the family Cerambycidæ. They are widely distributed all over the world, but mainly in hot countries. The Musk Beetle (*C. Moschatus*) is found on willow trees. It has a strong but agreeable odor, somewhat resembling that of attar of roses.

čě-rām-ī-ā'-čě-æ, s. pl. [Lat. *cerami(um)*; fem. pl. suff. *-aceæ*.]

Bot.: An order of Florideous Algæ. Rose-red or purple sea-weeds (one freshwater?) with a filiform frond, consisting of an articulated, branching filament, composed of a single string of cells, sometimes coated with a stratum of small cells. (*Griff. & Henfrey*.)

čě-rām'-ic, a. [Gr. *keramikos*=pertaining to pottery; *keramos*=a potter.] Of or pertaining to pottery, or the art of pottery.

čě-rām'-icŷ, s. [CERAMIC.] All the varieties of baked or burnt clay. It is distinguished from *vitrics*, in which silice predominates, the result being glass.

čěr-am-īd'-ī-ūm, s. [A dimin. from Gr. *keramion*=a pitcher.]

Bot.: A name given to the globose-ovate or conical capsule of rose-spored Algæ. Examples are afforded by Laurencia.

čěr'-a-mist, s. [Eng. *ceram(ic)*; *ist*.] A maker of pottery or earthenware; a potter.

čěr-ā'-mī-ūm, s. [Gr. *keramion*=a little pitcher, from the shape of the capsules.]

Botany:

1. A genus of marine, rose-spored Algæ belonging to the tribe Confervoidæ. Several species occur on our coasts, *Ceramium rubrum* being especially common.

2. A synonym of *Didymochlæna*, a peculiar genus of South American Ferns. (*Treas. of Bot.*)

čěr'-a-pūs, s. [From Gr. *keras*=horn, and *apous*=without foot or feet.] [APUS.]

Zoöl.: A genus of Amphipodous Crustaceans. *Cerapus tubularis*, the Caddis-shrimp, is found among Sertulariæ in the sea, near Egg harbor in the state of New Jersey.

čěr-ar'-gŷr-ite, s. [Gr. *keras*=a horn; *argyros*=silver, and Eng. suff. *-ite* (*Min.*).]

Min.: A mineral of a pearl-gray, grayish-green, or whitish color; transparent. Composition: Chlorine, 24.7; silver, 75.3. It is found principally in Peru, Chili and Mexico.

čěr'-a-sin, **čěr'-a-sine**, s. [Lat. *ceras(um)*=a cherry, and Eng. suff. *-in*, *-ine* (*Chem.*).]

1. *Chem.*: The portion of the gum of the cherry, plum, and other trees, insoluble in water.

2. *Min.*:

(1) A mineral, the same as Mendipite (q. v.).

(2) Cromfordite (q. v.).

çêr'-a-sî'-noûs, *a.* [From Lat. *cerasinus*=cherry-colored.]

1. *Ord. Lang.*: Cherry-colored.

2. *Chem.*: Pertaining to cerasin.

çêr'-a-site, *s.* [Lat. *ceras(um)*=a cherry, and Eng. suff. *-ite* (Min.).]

Min.: Native muriate of lead.

çêr'-âs'-têş, *s.* [Gr. *kerastês*=horned, from *keras*=a horn.]

1. *Ord. Lang.*: A horned serpent, *Cerastes horridus*.

"Scorpion, and asp, and amphisbena dire, *Cerastes* horned, hydrus, and elops drear."

Milton: P. L., x. 525.

2. *Zoöl.*: A genus of Indian and African vipers, remarkable for their fatal venom, and for two little horns or pointed bones placed over each eye. They are of a livid gray color, and have a most terrific appearance. The horned viper.

çêr'-râs'-tî-ûm, *s.* [Gr. *keras*=a horn, from the shape of the capsules.]

Bot.: An extensive genus of Caryophyllaceæ, containing small, white-flowered plants, generally called Mouse-ear Chickweeds. The petals are generally bifid. The number of sepals, petals, and stamens varies; it is generally five in the two former, and ten in the staminal whorl.

çêr'-a-sûs, *s.* [Lat., from Gr. *kerasos*=a cherry-tree.]

Bot.: The Cherry-tree, a genus of trees of the order Amygdalaceæ. Three species are British—(1) *Cerasus vulgaris*, called also *Prunus cerasus*, the Dwarf Cherry; (2) *C. Avium*, called also *Prunus Avium*, the Gean, and (3) *Cerasus Padus*, called also *Lauro-cerasus Padus* and *Prunus Padus*, the Bird Cherry. Hooker considers Nos. 1 and 2 mere varieties of each other. The first of these is generally supposed to have originated the Garden Cherry, and the second the Morella. The leaves, bark and fruit of *Cerasus Lauro-cerasus* (the Common Laurel), and the oil derived from them, are virulent poisons, owing to the amount of prussic acid which they contain. For a similar reason *C. capricida*, of Nepal, kills, as the Latin specific name imports, the goats of that region. *C. Padus* and *C. virginiana* have the deleterious property in less measure. All the species of *Cerasus* yield a gum analogous to gum tragacath. The leaves of *Cerasus Avium* have been used as a substitute for tea. A variety of the same tree is used in the Vosges and in the Black Forest in the preparation of the liquor called "Kirschenwasser." The kernel of *C. occidentalis*, a West Indian species, is employed in flavoring the liquor called "Noyau." The bark of *Cerasus virginiana* is prescribed as a febrifuge. So also is that of *C. capolim* of Mexico. Some of the species are useful as expectorants, and are much used in bronchial affections. [CHERRY.]

çêr'-âte, *s.* [Lat. *ceratus*, pa. par. of *cero*=to cover with wax; *cera*=wax.] A pharmaceutical preparation of wax, oil, and some softer substance made into a plaster.

çêr'-â-têd, *a.* [Lat. *ceratus*=waxed, pa. par. of *cero*=to wax; *cera*=wax.] Waxed, covered with wax. (Bailey.)

çêr'-râ-tîd'-î-ûm, *s.* [Gr. *keras*=a horn; *eidōs*=form, appearance.]

Zoöl.: A genus of Infusoria, of the family Oxytrichina. It is furnished with cilia, horns on the fore part of the body, but neither hooks nor styles. One species, *Ceratidium cuneatum*, Dujardin considered to have been a mutilated Oxytricha. The appearance of horns arises from the anterior part of the body being deeply notched. (Griff. & Henfrey.)

***çer'-a-tîne**, *a.* [From Gr. *keratinês*=the fallacy called the horns; *keras*=a horn.] Sophistical.

çêr'-a-tî-têş, **çêr'-a-tîte**, *s.* [From Gr. *keras*, genit. *keratos*=a horn, and suff. *-itês*.] [ITE.]

Palæont.: A genus of Ammonitidæ, with a discoidal shell, having lobed sutures with the lobes oviculated. They exist from the Devonian to the Cretaceous formations, being found in Europe and India.

cêr'-râ-tî-ûm, *s.* [Gr. *keration*, dim. of *keras*=a horn.]

Botany:

1. A genus of Isariacei (hyphomycetous Fungi), containing a generally diffused British plant, *C. hydnoïdes*, which grows on rotten wood, has a tuft of white simple or slightly-branched prickly-like processes, which produce on their surface sterigmata (spicules, Berk.), each of which is surrounded by a spore which easily falls off. The whole plant read-

ily collapses into a mucilaginous mass. The cellular appearance figured by Greville depends on the collapsing of the processes. (Griff. & Henfrey.)

2. A kind of fruit, placed by Lindley under his class Syncarpi. It is superior, has a pericarp dry externally, and is dehiscent by valves separating from the heplum.

çêr'-râ'-to, *in compos.* [From Gr. *keras*, genit. *keratos*=a horn.] Provided with a horn or horns.

cerato-branchial, *a.*

Comp. Anat.: A term applied by Prof. Owen in his Homologies to the longer bent pieces supported by the bones, which form the lower extremities of the branchial arches in fishes.

cerato-glossus, *s.*

Anat.: A name for the hyo-glossus muscle, from its appearance and insertion into the tongue. (Mayne.)

cerato-hyal, *a.* Pertaining to the larger of the two chief parts of the hyoid bone

çêr'-â-tô-çêle, *s.* [Gr. *keras*=a horn; *kêlē*=a tumor.]

Pathol.: A term for a hernia of the corner of the eye, consisting in the protrusion of the inner layer by the pressure of the aqueous humor at some point where the outer layer is destroyed by ulceration.

çêr'-ât'-ô-dûs, *s.* [From Gr. *keras*, genit. *keratos*=a horn, and *odontos*, genit. *odontos*=a tooth.]

1. *Zoöl.*: A genus of fishes, order Dipnoi. With Lepidosiren, till lately placed among the Amphibia, it stands in organization as the head of the fishes, and constitutes the point of transition between them and reptiles. *Ceratodus Fosteri* is the Australian Mud-fish, and there are other recent species.

2. *Palæont.*: Agassiz first founded the genus on certain horned teeth found in Triassic and Jurassic rocks. Seventeen types of teeth have since been found in Queensland in Australia, and in Central India.

çêr'-a-tô-nî-a, *s.* [Gr. *keration*=a little horn; dim. of *keras*=a horn, from the shape of the pods.]

Bot.: A genus of leguminous plants. *Ceratonia Siliqua* is the St. John's Bread, or the Carob-tree (q. v.). [CAROB.]

çêr'-râ-tô-phÿl'-lâ'-çê-æ, *s. pl.* [Mod. Lat. *ceratophyll(um)*, and Lat. nom. pl. fem. suff. *-aceæ*.]

Bot.: A natural order of plants, consisting of floating herbs with whorls of multifid, cellular leaves.

çêr'-râ-tô-phÿl'-lûm, *s.* [Gr. *keras*=a horn; *phÿllon*=a plant, a leaf, the petals resembling a horn in shape.]

Bot.: A genus of plants, the typical one of the Ceratophyllaceæ, of which it is the only known genus, and has only one known species. *C. demersum* (Hornwort) is common in ponds and ditches.

çêr'-a-tôph'-ÿ-ta, *s.* [Gr. *keras*=a horn; *phyton*=a plant.] A tribe of Corals of the family Corticati, the internal axis of which has the appearance of wood or horn.

çêr'-â-tô-tôme, *s.* [From Gr. *keras*, genit. *keratos*=a horn, and *tomos*=cutting.] A knife used in dividing the cornea.

çêr'-râun'-îcs, *s.* [Gr. *keranos*=thunder.]

Physics: That branch of physics which treats of heat and electricity.

çêr'-râun'-îte, *s.* [Gr. *keranos*=thunder, and Eng. suffix *-ite* (Min.) (q. v.).] A thunder-stone. (Cleaveland.)

çêr'-râun'-ô-scôpe, *s.* [Gr. *keranos*=thunder; *skopeō*=to view, to examine.] An instrument or machinery employed in the ancient mysteries to imitate thunder and lightning.

çêr'-bêr'-a, *s.* [Named after Cerberus.]

Bot.: A genus of poisonous plants of the natural order Apocynaceæ. They are principally ornamental shrubs, and are natives of the Friendly Isles, India, &c. The fruit of *Cerbera Ahovai* is a deadly poison. The kernels of *C. Manghas* are emetic and poisonous; those of *C. Odollam lactaria* and *salutaris* are believed to be harmless, but it is doubtful if they are really so.

çêr'-bêr'-ê-ân, **çêr'-bêr'-î-ân**, *a.* [CERBERUS.] Of or pertaining to Cerberus.

çêr'-bêr'-ûs, *s.* [Lat. *Cerberus*; Gr. *kerberos*.]

Myth.: A three-headed dog, fabled to guard the gates of hell, and whose bite was poisonous.

çêr'-câr'-î-a, *s.* [Gr. *kerkos*=a tail; Lat. neut. pl. suff. *-aria*.] Originally considered a genus of Infusoria, but since shown to be the second stage in the development of a Trematode worm or fluke. The body is oblong, depressed, changeable; the mouth subterminal, armed or unarmed; acetabulum sub-central; tail filiform, simple, attenuate at the apex, deciduous. They are found parasitically on

the body, or within the intestines, liver, ovaries, &c., of Mollusca (Symnæus, Planorbis, &c.), and may be obtained by wounding the body in water.

Cercarie Seminis *Spermatozoa*, or *Spermatic Animalcules*: A name given by the oldernaturalists to certain moving bodies found in the seminal vessels in animals, and even in plants. Ohrenberg placed them under the Haustellate Entozoa. They are by the mass of biologists not now believed to be organisms. [SPERMATOZOA.]

çêr'-câr'-î-ân, *a. & s.* [Gr. *kerkos*=a tail.]

A. As adj.: Of or pertaining to the Cercarians.

B. As substantive:

Zoöl.: An instinctive animalcule of the shape of a tadpole, having its body terminated by a tail-like appendage. (Owen.)

çêr'-câr'-î-form, *a.* [From Mod. Lat. *cercaria*, and Class. Lat. *forma*=form.]

Zoöl.: Formed like the Cercaria. (Huxley.)

***çêrçhe**, *v.* [O. Fr. *cerche*.] [SEARCH.]

***çer'-çiour**, *s.* [Fr. *chercher*=to seek.] [SEARCH.] A searcher.

"*Cercouris*, vesiaris, &c."—Aberd. Reg.

çêr'-çîs, *s.* [Gr. *kerkis*=the rod or the comb by which the threads of the wool were driven home . . . a poplar-tree or the Judas-tree. (See definition.)]

Bot.: A common genus of plants. Tribe, Bauhi niæ. *Cercis siliquastrum* is a tree, a native of the south of Europe, and of several countries in Asia. It is a handsome low tree with a spreading head. The leaves are remarkable for their unusual shape; they are of a pale, bluish-green color on the upper side, and sea-green on the under. The flowers have an agreeable acid taste, and are mixed in salads, and the flower-buds are pickled. It has received the name of the Judas-tree, from the tradition that it was upon a specimen of it, near Jerusalem, that the traitor Judas hanged himself.

çêr'-cô-çê-bûs, *s.* [From Gr. *kerkos*=a tail, and *kêbos*=an ape.]

Zoöl.: A genus of Quadrumana. Tribe or section, Catarhina. *Cercocebus sabæus* is the Green Monkey or Guenon. It comes from Africa, and is not unfrequently seen in menageries.

çêr'-cô-lâ'-bêş, *s.* [From Gr. *kerkos*=a tail, and *labê*=a grip or hold.]

Zoöl.: A genus of Rodents, the typical one of the family Cercolabidæ (q. v.). The tail is long and prehensile. Locality, South America.

çêr'-cô-lâ'-bî-dæ, *s. pl.* [From Mod. Lat. *cercolabes*, and Lat. fem. pl. adj. suff. *-idæ*.]

Zoöl.: A family of Rodentia, comprising the American Porcupines. It is closely akin to the Hystriidæ or ordinary Porcupines, but the American species climb trees, which their congeners in the Old World never attempt to do.

çêr'-cô-lêp'-têş, *s.* [From Gr. *kerkos*=tail, and *leptos*=peeled, husked . . . fine, thin.]

Zoöl.: The typical genus of the family Cercopitidæ.

çêr'-cô-lêp'-tî-dæ, *s. pl.* [From Mod. Lat. *cercopit(es)*, and Lat. fem. pl. adj. suff. *-idæ*.]

Zoöl.: A family of plantigrade carnivorous mammals. The species are generally called Kinkajous. They are small in size and inhabit tropical America.

çêr'-côm'-ô-nadş, *s. pl.* [CERCOMONAS.] Dujardin's English name for the genus *Cercomonas*.

çêr'-côm'-ô-naş, *s.* [Gr. *kerkos*=a tail; Lat. *monas*=unity, a unit, a monad; Gr. *monas*.] [MONAD.] A genus of Infusoria, of the family Monadina. Body rounded or discoidal, tuberculated, with a variable posterior prolongation in the form of a tail, which is longer or shorter and more or less filiform. (Griff. & Henfrey.)

çêr'-côp'-î-dæ, *s. pl.* [Mod. Lat. *cercop(is)*, and Lat. fem. pl. adj. suff. *-idæ*.]

Entom.: A family of Homopterous insects, found abundantly in grassy places. The larvæ have the property of producing the frothy substance, like saliva commonly known as Cuckoo-spit. The species are numerous.

çêr'-cô-pîs, *s.* [Lat. *cercopæ*=a grasshopper.]

Entom.: A genus of Homopterous insects, the typical one of the family Cercopidæ.

çêr'-cô-pî-thê'-cûs, *s.* [Gr. *kerkos*=a tail, and *pithêkos*=an ape.]

Zoöl.: A genus of long-tailed monkeys, having a prominent muzzle of about an angle of 60°, cheek-pouches, and callosities on the seat. The Cercopithecids belong to the section Catarhina and the subsection containing the Baboons; these have a long tail and both cheek-pouches and natesal callosities. They are found in Africa.

†*çère*, s. [O. Fr. *cere*; Lat. *cera*=wax.]

*1. *Ord. Lang.*: Wax.

2. *Animal Physiol.*: The naked skin which in some birds, such as the hawks, covers the base of the bill.

cere-cloth, s. [CERECLOTH.]

cère, **çéare*, v. t. [O. Fr. *cerer*; Fr. *cirer*; Lat. *cera*=wax. Cf. Wel. *cwyr*; Ir. & Gael. *ceir*; Gr. *kēros*, all=wax.]

1. To wax, or cover with wax. [CERECLOTH.]

2. To wrap up in a cerecloth.

çër-ě-āl, a. & s. [Lat. *cerealis*=pertaining to Ceres, the goddess of corn and tillage.]

A. *As adj.*: Of or pertaining to wheat or other grain.

B. *As subst.* (generally in the plural): Any corn or grain used for food.

çër-ě-lī-a, s. [Lat. neut. pl. of *cerealis*.]

*1. *Ann. Antig.*: The annual feast of Ceres, held on the 19th of April.

†2. Cereals.

çër-ě-a-līn, s. [Fr. *céréaline*; Lat. *cerealis*=of or pertaining to Ceres.]

Chem.: A nitrogenous substance found by M. Mège Mouriés in bran.

çër-ě-běl (Eng.), *çër-ě-běl-lūm* (Lat.), s. [Lat. *cerebellum*=a little brain, dim. of *cerebrum*=a brain.]

1. *Anat.*: A portion of the brain situated beneath the posterior lobes of the cerebrum, and about one-seventh the size of the latter, from which it is protected by the *tentorium cerebelli*. It is composed of gray matter on the surface and white in the interior. In shape the cerebellum is oblong and flattened, largest from side to side, and divided into two hemispheres, separated on the upper surface by the superior vermiform process; on the under surface there is a deep fissure termed the *vallecula* or valley, corresponding with the medulla oblongata. On making a vertical incision, the arbor vitæ cerebelli is seen, the white central substance resembling the trunk of a tree with branches, branchlets and leaves. Nearer the commissure than to the lateral border is a yellowish-gray dentated line, the corpus rhomboideum, or ganglion of the cerebellum. The cerebellum is associated with the rest of the brain by three pairs of rounded peduncles or cords, the superior proceeding forward and upward to the testes, forming the anterior part of the lateral boundaries of the fourth ventricle with the valve of Vieussens between them; the middle, the largest, are lost in the pons varolii, and the inferior descend to the posterior part of the medulla oblongata, and form the inferior portion of the lateral boundaries of the fourth ventricle.

2. *Physiol.*: It is connected with the powers of motion, and is largest in those animals which require the combined effort of a great variety of muscles to maintain their usual position and execute their ordinary movements. It does not appear to affect voluntary power, or reflex movements, but chiefly combined motor action. According to Dr. Ferrier the cerebellum is the co-ordinating center for the muscles of the eyeball. In the system of phrenologists, first propounded by Gall, it is the organ of the sexual instinct.

çër-ě-běl-lar, *çër-ě-běl-loūs*, a. [Eng. *cerebel*; -ar.] Of or pertaining to the cerebel, or brain.

çër-ě-běl-lī-tīs, s. [Lat. *cerebell(um)*; and suff. *-itis* (Med.) (q. v.).]

Pathol.: Inflammation of the cerebellum (q. v.).

çër-ě-brāl, *çër-ě-brāl*, a. [Lat. *cerebrum*=the brain.] Of or pertaining to the brain.

cerebral ganglia, s. pl.

Anat.: Nerve centers situated in the head of some of the inferior animals.

cerebral hemispheres, s. pl.

Anat.: The two hemispheres dividing the upper part of the brain.

cerebral nerves, s. pl.

Anat.: the nerves, twelve in number, running from the brain to the eyes, the nose, the tongue and other parts of the bodily frame.

çër-ě-brāl-gī-a, s. [Lat. *cerebrum*=the brain, and Gr. *algos*=pain.] *Pathol.*: Pain in the head.

çër-ě-brāl-ism, s. [Eng. *cerebral*; -ism.] The doctrine that mental operations are due to brain action, or that thought is a function of the brain.

çër-ě-brāl-i-zā-tion, s. [Eng. *cerebral*, and suff. *-ization*.] Enunciation by bringing the tip of the tongue upward against the palate.

çër-ě-brāte, v. i. [Lat. *cerebrum*=the brain.] To have the brain acting.

çër-ě-brā-tion, s. [Lat. *cerebrum*=the brain.] *Physiol.*: The action of the brain. (Dunghlison.)

çër-ě-brīc, a. [Lat. *cerebr(um)*=the brain, and Eng. suff. *-ic*.] Of or pertaining to the brain.

cerebric acid, s.

Chem.: A fatty acid, extracted by means of ether from the matter of the brain after it has been exposed to the action of boiling alcohol. When pure it is white and crystalline.

çër-ěb-rī-form, a. [Lat. *cerebrum*=the hair, and *forma*=form, appearance.] Resembling the brain; brain-like.

çër-ě-brīn, s. [Lat. *cerebr(um)*=the brain, and Eng. suff. *-in* (Chem.).]

Chem.: $C_{17}H_{33}NO_3$, a light amorphous powder, without taste or smell; it swells up like starch when boiled with water, and is converted, by boiling with dilute acids, into a saccharine substance and other products. (Fownes.)

çër-ě-brī-tīs, s. [From Lat. *cerebr(um)*=the brain, and Lat. & Gr. suff. *-itis*, denoting inflammation.]

Med.: Inflammation of the substance of the brain. Cerebritis may be either acute or chronic. The acute form of the disease runs a very rapid course and usually terminates fatally. The symptoms are as follows, viz., a deep-seated, violent, oppressive, and persistent pain in the head, with some feverishness and vomiting, pallor of the face, low and irregular pulse, depression of spirits, confusion of thought, then convulsions, loss of sensation, paralysis, coma, and death. Chronic cerebritis, to which the term ramollissement or softening of the brain is frequently applied, is usually of a local or partial character, and is consequently much slower in its progress. This form of the disease, which may or may not be a sequence of the acute, is characterized by certain well-marked symptoms, such as loss of memory, failing intellectual powers with a consciousness of the decline, dull and protracted pain in the head, tingling or numbness in different parts of the body, impairment of the faculties of sight and hearing, and paralysis slowly increasing. [BRAIN-FEVER.]

çër-ě-brō, in compos. [From Lat. *cerebrum*=the brain.] Pertaining to the brain, as *cerebro-spinal* (q. v.).

cerebro-spinal, a.

Anat.: Pertaining to that part of the nervous system which consists of the brain and spinal cord. ¶ *The cerebro-spinal axis*: The brain and spinal cord. Also called the *cerebro-spinal centers* and the *cerebro-spinal system*.

çër-ě-brōld, a. [Lat. *cerebr(um)*=the brain; Gr. *eidos*=form, appearance.] Belonging to the brain.

çër-ě-brōp-a-thỹ, s. [Lat. *cerebrum*=the brain, and Gr. *pathos*=suffering, affection; *paschō*=to suffer.]

Med.: A hypochondriacal condition verging upon insanity, occasionally occurring in those whose brains have been overtaxed. (Dunghlison.)

cerebro-spinal fever, *cerebro-spinal meningitis*, s.

Med.: A fever affecting primarily the meninges of the brain and spinal cord. Its period of incubation is from two days to one week. It is usually characterized by chill, violent head symptoms, stiffness and contraction of the muscles of back of neck.

çër-ě-brūm, *çër-ě-brūm*, s. [Lat. *cerebrum*=the brain.]

1. *Anat.*: The higher and front portion of the brain, as opposed to the cerebellum, the hinder and lower portion. The cerebrum is composed of a number of convolutions externally, and divided superiorly by the great longitudinal fissure, containing the *falk cerebri*, and marking the original development of the brain (q. v.) into two symmetrical halves, which are connected by a broad band of white substance, the corpus callosum. If either hemisphere be cut through, a center of white substance will be found surrounded by a gray border, following the zigzag of the sulci and convolutions. Each hemisphere is divided into an anterior, middle, and posterior lobe; the anterior rests on the roof of the orbit, and is separated by the fissure of Sylvius from the middle lobe, which lies in the middle fossæ of the base of the skull, and is separated from the posterior at the ridge of the petrous bone; the posterior rests

2. *Anat.*: The higher and front portion of the brain, as opposed to the cerebellum, the hinder and lower portion. The cerebrum is composed of a number of convolutions externally, and divided superiorly by the great longitudinal fissure, containing the *falk cerebri*, and marking the original development of the brain (q. v.) into two symmetrical halves, which are connected by a broad band of white substance, the corpus callosum. Each hemisphere is divided into an anterior, middle, and posterior lobe; the anterior rests on the roof of the orbit, and is separated by the fissure of Sylvius from the middle lobe, which lies in the middle fossæ of the base of the skull, and is separated from the posterior at the ridge of the petrous bone; the posterior rests

on the tentorium. On the middle line of the corpus callosum is the raphe, a linear depression, and a section on each side of it exposes the ventricles (q. v.) extending from one end of the hemispheres to the other.

2. *Physiol.*: According to Dr. Ferrier—(1) The anterior portions of the cerebral hemispheres are the chief centers of voluntary motion and of the active outward manifestations of intelligence. (2) Individual convolutions are separate and distinct centers; and in certain groups of convolutions are localized the centers for various movements—e. g., eyelids, face, mouth, tongue, ear, neck, hand, foot, and tail of animals. (3) The action of the hemisphere is in general crossed; but certain movements of the mouth, tongue and neck are bilaterally co-ordinate from each cerebral hemisphere.

çer-ě-ō-lite, s. [CEROLITE.]

çer-ě-ōp-sis, s. [Gr. *keras*=a horn, and *opsis*=the face.]

Zoöl.: The Pigeon-goose, an Australian genus of the Anatidæ or Duck family, and the sub-family Anserinæ, or Geese. *Cereopsis Novæ Hollandiæ* is abundant on the south coast of Australia and the adjacent islands.

***çer-ě-ous**, a. [Lat. *cereus*, from *cera*=wax.] Waxed, consisting of or containing wax.

çer-ēr-ite, s. [From Lat. *Ceres* (genit. *Cereris*), and Eng. suff. -ite (Min.).] [CERES.]

Min.: The same as CERITE (q. v.). (*Brit. Mus. Cat.*)

Çer-ēs, s. [Lat.]

I. Ordinary Language:

1. **Lit.**: *Roman Mythol.*: The daughter of Saturn and Ops, and the goddess of Corn and Tillage. She is generally represented with ears of corn on her head, and holding in one hand a lighted torch, and in the other a poppy, her sacred flower.

2. **Fig.**: Applied to corn.

"This ground with Bacchus, that with *Ceres* suits,
That other loads the trees with happy fruits."

Dryden: *Virgil*; *Georgic* i. 81.

II. **Astron.**: An asteroid, the first found. It was discovered by Piazzi on January 1, 1801. Having observed it at Palermo, in Sicily, he called it *Ceres*, after the old tutelary divinity of that island. [I.] Under favorable circumstances it has been seen by the naked eye as a star of the seventh magnitude, but more generally it looks like one of the eighth magnitude, only the light has a red tinge, and a haze is round the planet as if it had a dense atmosphere.

çer-ě-ūs, s. [Lat. *cereus*=waxen, from the appearance of the shoots.]

Bot.: The Torch-thistle, a large genus of plants of the order Cactaceæ, remarkable for their singularity of form, and the beauty of the flowers. *Cereus giganteus*, the Suwarrow or Saguaro of the Mexicans, is the largest and most striking of the genus. It rises to the height of fifty or sixty feet, and looks more like a candelabra than a tree of the normal type. Other notable species are *C. senilis*, the long gray bristles of which give it the appearance of the head of an old gray-haired man. *C. grandiflorus* is the bright flowering *Cereus*, but there are others which also flower at night. *C. speciosissimus*, an

Cereus.

erect plant, and *C. flagelliformis*, a creeper, are not unfrequently met with in gardens. The genus are generally useful as cardiac agents and anti-pyretics—particularly the Mexican fever-few, *C. Bonplandi*.

***çer-foyl**, s. [CHERVIL.]

"Avance, *cerfoyl*, herbe Robert."—*Relig. Antiq.*, i. 55.

***çerge**, ***çierge**, ***sërge**, s. [O. Fr. *cerge*, *cierge*, *sierge*; Sp. *cirio*=a wax taper; Lat. *cereus*=waxen; *cera*=wax.] A wax taper.

"Ther brenden *cerges* inne."—*Havelok*, 594.

***çer-gyn**, v. [SEARCH.]

"*Cergyn*. Scrutor, rimor."—*Prompt. Parv.*

çer-ī-a, s. [Lat. *cereus*=waxen, pliant.]

Med. Zoöl.: An old name for a kind of flat worm bred in the intestines. [TÆNIA.]

***çer-ī-āl**, a. [CERRIAL.] Of or pertaining to the Cerrus oak-tree.

***çerlawnt**, s. [SERGEANT.]

"*Cerlawnt* of mace. Apparitor"—*Prompt. Parv.*

"*Cerlawnt*. Indagator."—*Ibid.*

çer-īf-ēr-ous, a. [From Lat. *cera*=wax, and *fero*=to bear, and Eng. suff. -ous.]

Bot., &c.: Producing wax. (*R. Brown*, 1874.)

çer-in, **çer-ine**, s. [Lat. *cera*=wax, and Eng. suff. -in, -ine (Chem.).]

1. **Chem.**: A substance composed of fine crystalline needles, deposited while cooling, when wax has been boiled in alcohol. It is composed of carbon 48, hydrogen 50, and oxygen 2. It forms 70 to 80 per cent. beeswax. It is white, analogous to wax, fusible at 134°F. When treated with caustic alkali ley it is converted into margaric acid and *ceraine*.

2. **Min.**: A brownish-black mineral, a variety of Allanite (q. v.), found in East Greenland, generally massive, and rarely crystallized in four-sided prisms. It is composed of silica 35.4, protoxide of cerium 29.9, oxide of iron 25.4, alumina 4.1, lime, 9.2. Specific gravity, 3.5-4.0.

çer-in-ite, s. [From Lat. *cera*=wax, and Eng. suff. -in, -ite (Min.) (q. v.).] [CERIN.]

Min.: A white or yellowish-white mineral akin to Heulandite, but massive with a waxy luster. Found in the trap of the Bay of Fundy.

çer-in-thē, s. [Lat. *cerinthe*, *cerintha*; Gr. *kerinthē*=the plant called *Cerinthē major* (see def.). Cf. also Lat. *cerinthus*; Gr. *kērinthos*=bee-bread, from Gr. *kērion*=a honey-comb, and *anthos*=flower.]

Bot.: A small genus of borage-worts. The species are mostly European. Two, *Cerinthē major* and *minor*, have been long cultivated in gardens under the name of Honey-wort.

çer-in-thī-anş, s. pl. [From *Cerinthus*, their founder, who flourished about A. D. 88.]

Eccles. Hist.: A heretical sect, followers of Cerinthus, a Jew by birth, who attempted to unite the doctrines of Christ with the opinions of the Jews and Gnostics. He believed that the Demiurge, or Creator of the World, who was not the Supreme Being, was also lawgiver of the Jewish nation. He having fallen off in character, God sent Christ, an æon, to enter into a certain Jewish man called Jesus, to subvert the power of the Demiurge, who, irritated, produced the crucifixion. The æon Christ shall again return to the man Jesus, and reign with his followers in Palestine for 1,000 years. Cerinthus is believed to have been born before the crucifixion of Christ, and St. John is said by Irenæus to have written his Gospel in opposition to his doctrines. The sect did not continue long.

çer-ī-ō-pōr-a, s. [From Gr. *kērion*=a honey comb, and Lat. *porus*; Gr. *poros*=a passage.]

Zoöl.: A genus of Polyzoa or Bryozoa, the typical one of the family Cerioporidæ.

çer-ī-ō-pōr-ī-dæ, s. pl. [From Mod. Lat. *ceri-opora* (q. v.), and Lat. fem. pl. adj. suff. -idæ.]

Zoöl.: A family of Polyzoa or Bryozoa, containing species with a solid, simple, or branched coenecium, composed of crowded contiguous cells. (*Nicholson*.)

çer-ī-ōps, s. [From Gr. *kēros*=beeswax, and *ōps*=the eye, the face, the countenance.]

Bot.: A genus of plants of the Mangrove family, natives of the shores of tropical Asia and Australia. They are closely related to the genus *Rhizophora*. The seed has the curious habit of germinating and protruding from the fruit while still attached to the bough.

çer-īph, s. [Etym. unknown.]

Type-founding: One of the fine lines of a letter, especially one of the fine cross-strokes at the top and bottom of capitals. (*Savage*.)

çer-īş'e, s. & a. [Fr. *cerise*=a cherry, from Lat. *cerasus*.]

A. As subst.: A cherry color, a light bright red.

B. As adj.: Of the color of cerise.

çer-ite, s. [Named by the discoverers after the planet Ceres, and suff. -ite (Min.).]

Min.: A mineral, a siliciferous oxide of cerium, of a brown or cherry-red color, slightly translucent, and brittle. It is found in Sweden. Composition: Silica, 20.4; seria, 73.5; water, 6.1.

çer-īth-ī-a-dæ, **çer-īth-ī-ī-dæ**, s. pl. [From Mod. Lat. *cerithium*, and Lat. fem. pl. adj. suff. -adæ, -idæ.]

Zoöl.: A family of gasteropodous mollusks, section Holostomata (Sea-snails). The shells are long and spiral, with many whorls and horny opercula.

çer-īth-ī-ūm, s. [From Gr. *keration*=a little horn, dimin. of *keras*=a horn.]

Zoöl & Palæont.: The typical genus of the family Cerithiade (q. v.). One hundred and thirty-six recent species are known, and 460 fossil, the latter from the Trias onward till now. (*Woodward*: *Mollusca*, ed. Tate.)

çer-ī-ūm, s. [Named by the discoverers after Ceres.]

Chem.: A metal (Sym. Ce.; At. Wt., 92) found with two other metals, lanthanum and didymium, in cerite. Powdered cerite is made into a thick paste with concentrated sulphuric acid, and heated nearly to redness. The mass is then treated with water, saturated with H₂S, filtered, acidified with HCl, and precipitated by oxalic acid. This precipitate heated in the air to redness gives a brown powder of the mixed oxides. Nitric acid dissolves the oxides of lanthanum and didymium, and leaves the oxides of cerium. The oxides of lanthanum and didymium are separated by the repeated crystallization of their sulphates (see Watts's *Dict. of Chemistry*). Cerium is obtained by reducing its chloride with sodium as a gray powder which decomposes water slowly. It dissolves in dilute acids with evolution of hydrogen. Cerous oxide, CeO, obtained by igniting the carbonate or oxalate, is a grayish-blue powder, which, in the air, oxidizes into ceroso-ceric oxide, Ce₂O₄, a yellowish-white powder. The salts of the former are colorless, those of the latter brown-red or yellow.

cerium carbonate, s. **Min.**: Lanthanite (q. v.).

cerium fluoride, s. **Min.**: Fluocerite (q. v.).

cerium phosphate, s. **Min.**: Churchite (q. v.).

cerium silicate, s. **Min.**: Cerite (q. v.).

***çer-kil**, s. [CIRCLE.]

çer-mā-tī-ī-dæ, s. pl. [From Gr. *kermation*, dimin. of *kerma*=anything cut small, and Lat. fem. pl. adj. suff. -idæ.]

Zoöl.: A family of Myriapoda, order Chilopoda. They have short bodies covered above with eight and below with fifteen plates. The legs are long.

çer-nous, **çer-nu-ous**, a. [Lat. *cernuus*=stooping, bending down.]

Bot.: Drooping, hanging, pendulous.

çer-ō-cōm-a, s. [From Lat. *cera*=wax; o connective, and *coma*=hair (?).]

Entom.: A genus of Coleopterous insects of the family Cantharidæ. About half a dozen species of this genus, which is remarkable for the extraordinary antennæ of the males, which are short, thick, with joints extremely irregular in shape and size, the terminal joints forming a large flattened knob, have been found. All are European.

çer-ō-grāph, s. [CEROGRAPHY.] A writing on wax.

çer-ō-grāph-īc, ***çer-ō-grāph-ī-cal**, a. [Eng. *cerograph(y)*; -ic, -ical.] Of or pertaining to cerography.

çer-ōg-rāph-īst, s. [Eng. *cerograph(y)*; -ist.] One who practices or is skilled in cerography.

çer-ōg-rāph-ý, s. [Gr. *kērographia*=painting with wax; *kerōs*=wax; *graphia*=writing, painting; *graphō*=to write.]

1. The act or art of writing on wax.

2. The art of engraving on copper covered with a thin film of wax, from which stereotype plates are taken. (*Moxon*.)

çer-ō-lite, s. [Gr. *kēros*=wax, and *lithos*=a stone.]

Min.: A greenish or yellowish-white mineral; transparent or translucent. Composition: Silica, 47.34; magnesia, 29.84; water, 21.04; hardness, 2-2.5. Specific gravity, 2.3-2.4. Luster vitreous or resinous. It is found at Frankenstein, in Silesia. It feels greasy to the touch, whence its name. (*Dana*.)

çer-ō-mā, s. [Lat. *ceroma*; Gr. *kērōma*=ointment for athletes; *kēroō*=to anoint, to wax over; *kēros*=wax.] That part of the ancient gymnasia and baths in which athletes used to anoint themselves.

çer-ō-mān-çý, s. [Gr. *kēros*=wax, and *mantia*=prophecy, divination.] A method of divination, formerly practiced, by dropping melted wax into water and observing the figures formed.

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camēl, hēr, thēre; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rūle, fūll; trý, Sýrian. æ, œ = ē; ey = ā. qu = kw.

†*çê-rôon'*, s. [SEROON.] A large bundle or package composed of skins.

çêr-ô-pê-gî-a, s. [From Gr. *kēros*=beeswax, and *pêgē*=a well, a fountain.]

Bot.: A genus of Asclepiads (Asclepiadaceæ), containing more than fifty species of perennial herbaceous plants, natives of India and Africa. They have a bulbous root, and short erect or twining stems. The calyx is five-parted. Several species are employed for food; in some cases the whole plant is eaten as a salad, in others the fleshy leaves, stems, and tubers are used as pot vegetables. *Ceropegia edulis* is said to be eaten, whence its specific name.

**çê-rôph-êr-a-rý*, s. [Lat. *ceroferarius*, from Gr. *kēros*=wax; *pherō*=to carry.]

1. An acolyte, an assistant of lower grade in a church, whose office it was to carry the candles in any religious procession. (Thomas Fuller.)

2. A stand for candles.

†*çêr-ô-plas-tic*, a. & s. [Fr. *céoplastique*; Gr. *kēroplastikos*=of or for modeling in wax: *kēros*=wax; *plassō*=to mold, to model.]

A. As adj.: Modeled in wax.

B. As substantive:

Sculp.: The art or science of modeling figures in wax.

çêr-ôp-têr-is, s. [Gr. *kēros*=wax; *pteris*=a fern.]

Bot.: A name formerly applied to the species of *Gymnogramma*, or Gold and Silver Ferns.

çêr-ô-sine, *çêr-ô-sin*, s. [Lat. *cera*=wax; Gr. *kēros*=wax, and Eng. suff. *-ine* (Chem.) (q. v.).]

Chem.: A waxy substance found on sugar-canes. It is composed of carbon, hydrogen, and oxygen.

çêr-ô-tâte, s. [CEROTIC ACID.]

**çêr-ô-te*, s. [Low Lat. *cerotum*; Lat. *ceratum*.] The same as CERATE (q. v.).

"In those which are critical, a *cerote* of oil of olives, with white wax, hath hitherto served my purpose."—*Wiseman*.

çêr-ô-têne, s. [Low Lat. *cerot(um)*, and Eng. suff. *-ene* (Chem.).]

Chem.: $C_{27}H_{54}$ =Cerylene. An olefine hydrocarbon, melting at 57°, obtained by the dry distillation of Chinese wax.

çêr-ô-t-ic, a. [Low Lat. *cerot(um)*, and Eng. suff. *-ic*.]

cerotic acid, s.

$C_{26}H_{53}$

COOH

A monobasic fatty acid which crystallizes in small grains, melting at 78°, and distilling without decomposition; its salts are called cerotates. This acid is the principal constituent of cerin, the portion of beeswax which is soluble in boiling alcohol, from which cerotic acid may be prepared by precipitating with lead acetate, decomposing the precipitate with acetic acid, and recrystallizing from boiling alcohol. Also from the dry distillation of Chinese wax, which consists of cerylcerotate.

çêr-ôx-ý-lôn, s. [Gr. *kēros*=wax; *xylon*=wood, a tree.]

Bot.: A genus of Palmaceæ (Palms). *Ceroxylon andicola* yields wax, which forms a coating over its trunk.

çêr-rî-al, a. [Lat. *cerrus*; Fr. *cerre*=a variety of oak.] [CERIAL.] Of or pertaining to the Cerrus or Bitter-oak.

çêr-ris, *çêr-rüs*, s. [Lat. *cerrus*.]

Bot.: The Bitter-oak, *Quercus cerris*.

**çêrss*, v. t. [Fr. *chercher*.] To search.

"Als at the kingis hienes deput & ordand certane cesouris [cersouris] in euirilk toun, quihlk is ane port, quihlk sal haue power to *çêrss* the salaris [sailors] & passaris furth of the Rome for hauffing furth of money be quhat sumeur persounne spirituale or temporale, . . ."—*Acts Ja. IV.*, A. 1503, Ed. 1814, p. 242.

**çêrt*, a. [Fr. *certes*, from Lat. *certus*=certain, assure.] Sure, certain.

çêr-tain, **çer-taine*, **çer-tayn*, **çer-ten*, **çer-tein*, a., adv. & s. [O. Fr. *certein*; Fr. *certain*; Ital. *certano*; Lat. *certus*, with suff. *-anus*. Connected with Lat. *cerno*=to perceive, and Gr. *krinō*=to judge.]

A. As adjective:

I. Objectively:

1. Sure to happen, inevitable.

"Virtue that directs our ways,
Through certain dangers to uncertain praise."
Dryden.

*2. Trustworthy; on which one can depend; reliable.

"If he myght on tham troste
That thei were *certayn*."—*Langtoft*, p. 45.

3. Fixed, settled, determined beforehand.

"You shall gather a *certain* rate every day."—*Exodus* xvi. 4.

4. Indubitable, unquestionable, past doubt.

"Those things are *certain* among men, which cannot be denied without obstinacy and folly."—*Tillotson*.

5. Unfailing.

"I have often wished that I knew as *certain* a remedy for any other distemper."—*Mead*.

II. Subjectively:

1. Sure, convinced, assured.

(1) With of.

"This the mind is equally *certain* of, whether these ideas be more or less general."—*Locke*.

(2) With an infinitive.

*2. Determined, resolved.

"However I with thee have fix'd my lot,
Certain to undergo like doom of death,
Consort with thee."
Milton: P. L., ix. 952.

III. Indefinitely:

1. In agreement with a subst.: Some one.

"And Jesus answering said, A *certain* man went down from Jerusalem to Jericho, . . ."—*Luke* x. 30.

"After wol I speke in pryvyte
Of *certeyn* thing that toucheth the and me."

Chaucer: C. T., 3,493.

2. Absolutely: An undetermined number or quantity.

"How bad soever this fashion may justly be accounted, *certain* of the same countrymen do pass far beyond it."—*Carew: Survey*.

¶ To make *certain*: To inform. [Lat. *certiorem facere*.] [ASCERTAIN.]

*B. As adverb:

1. Absolutely: Certainly, surely, undoubtedly.

"I wol telle it non other man, *certayn*."

Chaucer: C. T., 3,495.

2. With a prep.: In *certain*, in *certayne*, for *certain*=certainly, assuredly.

"Yet how should I for *certain* hold, . . ."

Tennyson: The Two Voices.

*C. As substantive:

1. Certainty, sure facts.

"Wherof the *certaine* no man knoweth."

Gower, i. 8.

2. A number or amount, either stated or not; a quantity.

"He took with him a *certain* of his idle companions."—*Bale: Acts of Eng. Votaries*.

3. A fixed period or limit.

"Every time hath his *certain*."

Gower, iii. 251.

"After he had contynued a *certaine* of time."—*Fabian's Chronicle: Hen. VI.*, p. 461.

¶ Of a *certain*: Assuredly, certainly.

"Of a *certain* these things are pretty toys."—*Scott: Fair Maid*, ch. iii.

¶ Crabb thus distinguishes between *certain*, *sure*, and *secure*: "*Certain* respects matters of fact or belief; *sure* and *secure* the quality or condition of things. A fact is *certain*, a person's step is *sure*, a house is *secure*. *Certain* is opposed to dubious, *sure* to wavering, *secure* to dangerous. A person is *certain* who has no doubt remaining in his mind; he is *sure* when his conviction is steady and unchangeable; he is *secure* when the prospect of danger is removed. When applied to things, *certain* is opposed to what is varying and irregular; *sure* to what is unerring; *secure* is used only in its natural sense. It is a defect in the English language, that there are at present no *certain* rules for its orthography or pronunciation; the learner, therefore, is at a loss for a *sure* guide. Amidst opposing statements it is difficult to *ascertain* the real state of the case. No one can *insure* his life for a moment, or *secure* his property from the contingencies to which all sublunary things are exposed." (Crabb: Eng. Synon.)

**çêr-tain*, **çer-teyne*, v. t. [CERTAIN, a.] To certify, to inform.

çêr-tain-ly, **çer-tain-liche*, **çer-tane-ly*, **çer-teyn-lie*, **çer-ten-lich*, adv. [Eng. *certain*; -ly.]

1. Assuredly, beyond doubt or question, of a certainty.

"Certenlich we be schent."

Seven Sages, 367.

"Certainly he that, by those legal means, cannot be secured, can be much less so by any private attempt."—*Dr. H. More: Decay of Christian Piety*.

2. Without fail.

"And he said, *Certainly* I will be with thee . . ."—*Exod.* iii. 12.

çêr-tain-ness, s. [Eng. *certain*; -ness.] The quality of being certain; certainty.

çêr-tain-tý, **çer-tein-te*, **çer-teyn-te*, **çer-tayn-tye*, s. [Eng. *certain*; -ty.]

1. The quality or state of being certain or free from doubt.

"If it myght that weys be brouht to *certeynte*."—*Langtoft*, p. 278.

"In hopeless *certainity* of mind."

Byron: Mazeppa, v. 17.

2. The quality or state of being fixed.

3. Assurance, confidence.

"Forthy may no *certainte* be sette upon his jugement."
Gower: C. A., i. 43.

" . . . at a verie venture, soe as it should be harde to builde any *certaynty* of charge to be rayssed upon the same."—*Spenser: State of Ireland*.

4. A thing certain, sure, or indubitable and undeniable.

"Nay, 'tis most credible; we here receive it,
A *certainty* vouch'd from our cousin Austria."
Shakesp.: All's Well that Ends Well, i. 2.

¶ At a *certainty*=in a state of confidence or assurance.

" . . . sometimes our way is clean, sometimes foul; sometimes up hill, sometimes down hill; we are seldom at a *certainty*."—*Bunyan: P. P.*, pt. ii.

Of a *certainty*: Assuredly, undoubtedly.

**çêr-tēs*, **çer-tys*, adv. [Fr. *certes*, from Lat. *certus*=sure.] Certainly, assuredly.

"And *certes*, if it nere to long to heere,
I wolde han told yow fully the manere."

Chaucer: The Knight's Tale, 877-8.

"*Certes*, who bides his grasp will that encounter rue."
Thomson: Castle of Indolence, i. 22.

çêr-thi-a, s. [Lat. *certhia*; Gr. *kerthios*=a little bird, a tree-creeper. [See def.]]

Ornith.: The Creeper, or Ox-eye, a genus of birds, the typical one of the family Certhidæ (q. v.). They are noticeable for their color: as *Certhia viridis*, the Green Creeper, and *C. aurantia*, the Orange-colored Creeper; and by the shape of the beak: as *C. falcata*, the Sickle-billed Creeper. *C. familiaris*, the Common or Brown Creeper. [CREEPER.]

çêr-thi-dæ, *çêr-thi-a-dæ*, s. pl. [From Lat. *certhia* (q. v.), and fem. pl. adj. suff. *-idæ*.]

Ornith.: A family of Tenuirostral birds, with long, slender, and slightly arched bills, and short legs furnished with strong claws, which enable them to creep about upon the trunks and branches of trees. Sub-families: Certhinae (Creeper proper), Sittinae (Nut-hatches), Troglodytinae (Wrens), Dendrocolaptinae (Tree-creeper), Synallaxinae, and Furnarinae, or Oven-birds.

çêr-thi-næ, s. pl. [From Mod. Lat. *certhia* (q. v.), and Lat. fem. pl. adj. suff. *-inæ*.]

Ornith.: The typical sub-family of the family Certhidæ (q. v.).

†*çêr-ti-fî-a-ble*, a. [Eng. *certify*; -able.] That may or can be certified; reliable.

"When *cerumen* accumulates and hardens in the ears, so as to occasion deafness, it is easily softened by filling the meatus with a mixture of olive oil and oil of turpentine."—Brande, in *Todd's Cyclopædia of Anatomy and Physiology*.

çêr-û-mîn-îf-êr-ous, *a.* [Lat. *cerumen* (genit. *ceruminis*); *fero*=to bear, and Eng. suff. *-ous*.] Bearing or producing cerumen.

çêr-û-mîn-ous, *a.* [Lat. *cerumen* (genit. *ceruminis*), and Eng. suff. *-ous*.] Of the nature of or pertaining to the cerumen or wax of the ear.

ceruminous glands, *s.*

Anat.: The follicles, or numerous small glands situated between the cutaneous lining and the cartilage of the external auditory canal.

çêr-ûr'-a, *s.* [From Gr. *keras*=horn, and *oura*=tail. So named from a horn-like appendage on the tail of the larva.]

Entom.: A genus of moths, family Bombycidae. *Cerura vinula* is the Puss-moth (q. v.).

çêr'-ûse, *s.* [Fr. *ceruse*; Sp. *cerusa*; from Ital. and Lat. *cerussa*; from Gr. *kêr*, genit. *kêros*=death, poison: from its poisonous qualities.]

1. *Ord. Lang.*: A name given to white lead or carbonate of protoxide of lead. Composition: Oxide of lead, 83.58; carbonic acid, 16.42. It is prepared from the subacetate of protoxide of lead by a current of carbonic acid, on exposing metallic lead in minute division to air and moisture; and also by the action of the vapor of vinegar on thin sheets of lead, by which the metal is both oxidized and converted into a carbonate. Mixed with oil it is used in painting, and a cosmetic is prepared from it.

"A preparation of lead with vinegar, which is of a white color, whence many other things, resembling it in that particular, are by chymists called *ceruse*; as the *ceruse* of antimony, and the like."—Quincy.

2. *Min.*: [CERUSSITE.]

cêr'-used, *a.* [CERUSE.] Washed over or treated with a cosmetic prepared from ceruse.

"Here's a color, what ladies cheek,

"*Ceruyceable*, or redy alle waye. *Obsequius*."—Ibid.

***çêr'-vÿçe**, *s.* [SERVICE.] (Prompt. Parv.)

***çêr'-vÿlle**, *v. t.* [O. Fr. *ceruelle*=the brain; Lat. *cerebellum*.] To dash out one's brains, to brain.

"To *ceruylle*: *excerebrare*."—Cathol. Anglicum.

***cêr'-vÿl-lêr**, *s.* [Mid. Eng. *cervyll(e)*; *-er.*] One who knocks out another's brains.

"A *ceruyller*: *excerebrator*."—Cathol. Anglicum.

çêr'-ÿl, **çêr'-ÿle**, *s.* [From Gr. *kêros*=bees-wax; and Eng., &c., suff. *-yl*, from Gr. *hylê*= . . . matter as a principle of being.]

Chem.: An organic radical, C₂₇H₅₅.

ceryl cerotate, *s.*

Chem.: C₂₇H₅₅.C₂₇H₅₃O=Chinese wax. This substance is produced on certain trees in China by the puncture of a species of Coccus. It is a white crystalline substance, which melts at 82°, soluble in alcohol. By dry distillation it yields cerotic acid and Cerylene, C₂₇H₅₄.

çêr'-ÿl-êne, *s.* [From Eng., &c., *ceryl*, and suff. *-ene* (Chem.) (q. v.).]

Chem.: The same as *cerotene* (q. v.).

çer-ÿl'-îc, *a.* [From Eng., &c., *ceryl* (q. v.), and suff. *-ic*.] Of or pertaining to ceryl.

cerylic alcohol, *s.*

Chem.: C₂₇H₅₅ (OH)=Cerotic alcohol. Obtained by fusing Chinese wax with solid potash, yielding potassium, cerotate, and ceryl alcohol. It is a waxy substance, melting at 97°; heated with potash lime it gives off H, and is converted into potassium cerotate.

***çer-yn**, *v. i.* [SEAR.]

"*Ceryn* and dryyn as trees or herbys. *Areo*, *marceo*."—Prompt. Parv.

***çeryows**, *a.* [SERIOUS.] (Prompt. Parv.)

çê-sa'-rê, *s.* [A coined word of no etymology.]

Logic: A syllogism in which the first and third propositions are universal negatives, and the second a universal affirmative, as—

"E no animal is incorporeal,
A all angels are incorporeal,
E therefore no angel is an animal."

çē-šār'-ē-ān, çē-šār'-ī-ān, *a.* [CÆSARIAN.]

Cesarean section: [CÆSARIAN SECTION.]

"The *Cesarean section* is cutting a child out of the womb, either dead or alive, when it cannot otherwise be delivered. Which circumstance, it is said, first gave the name of *Cæsar* to the Roman family so called."—*Quincy*.

Cesarewitch, *s.* [CZAREWITCH.]

çēs-pī-tī'-tioūs, *a.* [Lat. *cæspitius*=of or pertaining to turf; *cæspes* (genit. *cæspitis*)=a turf.] Resembling turf; made of turf.

"Breadth of the *cæspititious* ramparts."—*Gough*.

çēs-pī-tōse, *a.* [As if from Lat. *cæspitosus*=full of turf; *cæspes* (genit. *cæspitis*)=a turf.]

Bot.: An epithet applied to plants which grow in tufts or patches.

çēs-pī-tōūs, *a.* [Same etymol. as *cæspitose* (q. v.).] Of or pertaining to turf, resembling turf.

çæss (1), *çesse (1), *s.* [Derived from *assess* (q. v.).]

I. *Literally* (of excess):

*1. The act of assessing or levying a rate or tax.

*2. The tax or rate assessed.

"The like *cess* is also charged upon the country sometimes for victualling the soldiers, when they lie in garrison."—*Spenser*.

*II. *Fig.*: Apportionment; hence, due share.

"I prythee, Tom, beat Cutts' saddle, put a few flocks in the point; the poor jade is wrung in the withers out of all *cess*."—*Shakesp.*: *Hen. IV.*, Pt. I., iii. 1.

cess-payer, *s.* One who pays cess or county rates.

"... the Court, consisting of one magistrate and six *cess-payers*, only awarded 12s."—*London Daily Telegraph*, May 11, 1881.

çæss (2), *s.* [Etym. doubtful. It only occurs in the compound *cess-pool*. *Skeat* suggests *sus-pool*=hog's wash, a puddle, a heap of filth; Gael. *sos*=a coarse mess.]

cess-pipe, *s.* A pipe for carrying off waste water, &c., from a sink or cess-pool.

cess-pool, **sess-pool*, **sus-pool*, *s.*

1. *Lit.*: A deep hole or well for sewage to drain into. The use of cess-pools, which are a most prolific source of disease, is now forbidden in towns or other places where a proper system of drainage by water-carriage is provided.

2. *Fig.*: Any receptacle of filth.

"The *cess-pool* of *agio*, now in a time of paper money, works with a vivacity unexampled, unimagined; exhales from itself sudden fortunes, like *Aladdin-palaces*."—*Carlyle*: *French Revolution*, pt. iii.

*çæss (3), *çesse (2), *s.* [CEASE.] A ceasing or cessation.

çæss (1), *v. t.* [CESS, *s.*] To assess, to impose a rate or tax on.

"They came not armed like soldiers to be *cessed* upon me."—*Briskett*: *Discourse on Civil Life*, p. 157.

*çæss (2), *çesse, *çessen, *sessen, *v. t. & i.* [O. Fr. *cesser*; Ital. & Lat. *cesso*.] [CEASE.]

I. *Trans.*: To still, to calm, to cause to be quiet.

II. *Intransitive*:

1. *Ord. Lang.*: To cease.

2. *Law*: To neglect a legal obligation. [CESSOR.]

*çēs'-sant, *a.* [Lat. *cessans*, pr. par. of *cesso*=to cease.] Intermittent, ceasing, not continuous.

çēs-sā'-tion, *s.* [Lat. *cessatio*, from *cesso*=to cease.]

1. The act of ceasing, or stopping.

"The day was yearly observed for a festival, by *cessation* from labor."—*Sir J. Hayward*.

2. The state of being at rest.

"A long *cessation* of discourse ensued."
Pope: *Homer's Odyssey*: bk. xx., 387-8.

3. The end of action; the state of ceasing to be or act.

"The serum, which is mixed with an alkali, being poured out to that which is mixed with an acid, raiseth an effervescence; at the *cessation* of which, the salts, of which the acid was composed, will be regenerated."—*Arbuthnot*: *On Aliments*.

4. A temporary suspension of warfare; a truce. (Generally in the phrase *cessation of arms* or *hostilities*.)

"When the succors of the poor protestants in Ireland were diverted, I was entreated to give them some respite, by a *cessation*."—*King Charles*.

¶ Crabb thus distinguishes between *cessation*, *stop*, *rest*, and *intermission*: "To *cease* respects the course of things; whatever does not go on has *ceased*; things *cease* of themselves: *stop* respects some external action or influence; nothing *stops* but what is supposed to be *stopped* or hindered by another: *rest* is a species of *cessation* that regards labor or exertion; whatever does not move or exert

itself is at *rest*: *intermission* is a species of *cessation* only for a time or at certain intervals. That which *ceases* or *stops* is supposed to be at an end; *rest* or *intermission* supposes a renewal. A *cessation* of hostilities is at all times desirable; to put a *stop* to evil practices is sometimes the most difficult and dangerous of all undertakings: *rest* after fatigue is indispensable, for labor without *intermission* exhausts the frame." (Crabb: *Eng. Synon.*)

çēs-sā'-vīt, *s.* [Lat.=he has ceased, or omitted; third pers. sing. pret. of *cesso*=to cease.]

Law: A writ so called.

"*Cessavit* [is] a writ which [gave the lord power to recover lands] when a man who held lands by rent or other services, neglected or *ceased* to perform his services for two years together, or where a house had lands given to it on condition of performing some certain spiritual services . . . and neglected it."—*Wharton*: *Law Lexicon*.

çēs'-sēr, *s.* [CESS (2), *v.*]

Only known recent species *Cestracion Philippi* (the Port Jackson shark), having two dorsal fins, each furnished with a sharp spine in front; the ventral fin between the two dorsals; caudal fin unequally forked. It is sometimes called the Box Shark.

çēs-trā'-çī-ōn'-tī-dæ, *s. pl.* [From Mod. Lat. *cestracion*, and fem. pl. adj. suff. -idæ.]

Ichthy.: In Prof. Owen's classification a family of the Plagiostomi, the only one ranked under the sub-order, tribe, or group Cestracioni (q. v.).

çēs-trāph'-ōr-i, *s. pl.* [From Gr. *kestra*=a tool or weapon, pickaxe, or poleaxe; *phoreō*=to bear.]

1. *Ichthy.*: A group, tribe, or section of fishes, order Elasmobranchii, sub-order Plagiostomi. They have a strong spine in front of each dorsal fin, and obtuse back teeth. Only recent genus, *Cestracion* (q. v.).

2. *Palæont.*: The fish species called *Ichthyodonta* belong mainly to this group. They are found chiefly in the Palæozoic rocks.

çēs-trīn'-ē-æ, *s. pl.* [From Mod. Lat. *cestrum* (q. v.), and Lat. fem. pl. adj. suff. -ineæ.]

Bot.: A tribe of plants of the order Solanaceæ, in which the limb of the corolla is plicate, valvate, or induplicate in æstivation; calyx, five-toothed; corolla, funnel-shaped, five-lobed, and regular; stamens, five; anthers, dehiscing lengthways; ovary on a cupulate disk; pericarp, capsular or baccate. (*Craig*.)

çēs'-trūm, *s.* [Gr. *kestron*=betony.]

Bot.: A genus of plants, Bastard Jasmine, the typical one of the order Cestraceæ. *Cestrum Hediunda*, *auriculatum*, *laurifolium* and *Pseudoquina* are bitter febrifuges. Many species of *Cestrum*, and notably *C. euanthes lævigatum*, *corymbosum*, *Parqui*, and *bracteatum* are diuretic. They are also emollient, and are applied in a fresh state to wounds and ulcers to cleanse them, while finally the bruised leaves and unripe fruits are used by the people of Brazil in liver complaints and in *Catarrhus vesicæ*. *C. macrophyllum* and *nocturicum* are used to poison wild beasts.

çes-tui, çes-tuy (pron. çěst-wē), *pron.* [The obj. case of Norm. Fr. *cist*, *cest*=Mod. Fr. *ce*=this one.] For definition see etymology.

çē-tā'-çē-a, s. [Lat. *cete*, *cetus*; neut. pl. suff. -acea; Gr. *kētos*=a whale.]

1. *Zoöl.*: An order of mammiferous animals, which have no hind feet. They have the form of fishes, with the exception of the horizontal tail, an instrument useful in enabling them to rise speedily to the surface of the water for respiration, which they are obliged to do frequently, as they breathe with lungs. Their blood is warm; they are viviparous, and suckle their young. They are divided into the *Cetacea herbivora* and *C. ordinaria*, the first comprising the manati or lamantins, the halicore or dugongs, and stellerus; the latter the whales, dolphins, narwhals, porpoises, and cachelots; or the order may be divided into two, the Sirenia and Cetacea, in which case the latter will comprise the five following families: (1) Balenidae (Whalebone Whales), (2) Delphinidae (Dolphins and Porpoises), (3) Catodontidae (Sperm Whales), (4) Rhyncoceti (Xiphioid Whales), and (5) Zeuglodontidae, the last named being all fossil. (See these words.)

2. *Palæont.*: The Cetacea appear to begin in the Eocene, from which they extend onward till now.

çē-tā'-çē-an, a. & s. [Lat. *cetaceus*=pertaining to a whale; *cete*, *cetus*=a whale.]

A. *As adj.*: Of or pertaining to the Cetacea, cetaceous.

B. *As substantive*:

Zoöl.: An animal belonging to the Cetacea.

çē-tā'-çē-oūs, a. [Lat. *cetaceus*=pertaining to a whale; *cete*, *cetus*=a whale.] Of or pertaining to the Cetacea; of the whale kind.

çē-tā'-çē-üm, s. [Neut. sing. of Lat. *cetaceus*=of or pertaining to a whale; *cete*, *cetus*=a whale.]

Pharm.: An oily, concrete, crystalline, and semi-transparent matter, obtained from the cavity of the cranium of several species of whales, but especially of the spermaceti whale, *Physeter macrocephalus*.

çē-tē (1), s. [Lat., from Gr. *kētos*=a whale.]

Zoölogy:

1. The whale (q. v.).

"This cete thanne hise chaeles luketh."

Bestiary in Old Eng. Miscell. (ed. Morris), 513.

2. In some classifications one of two sub-orders of Cetacea, the other being the Sirenia.

*çe-te (2), s. [CITY.]

çē-tēne, s. [Lat. *cet(e)*, *cet(us)*=a whale, and Eng. suff. -ene (*Chem.*).]

Chem.: $C_{16}H_{32}$. An olefine hydrocarbon, boiling at 275°. It is a colorless liquid obtained by distilling ethal repeatedly with glacial phosphoric acid. It is soluble in alcohol and ether, but not in water.

çē-tē-ō-sâu'-rūs, s. [CETIOSAURUS.]

çēt'-ēr-äch, s. [Fr. *cétérac*; Ital. *cetracca*; a name probably of Arabic origin. (*Mahn.*)]

Bot.: A genus of polypodiaceous ferns of the group Asplenieæ, distinguished by having distinct simple sori, reticulated veins of which the marginal veinlets are free, and fronds clothed thickly with scales. One species is a commonish native fern, called Miltwaste or Scale-fern. To this plant was formerly attributed a marvelous influence over the spleen, and Vitruvius states that it had the effect of destroying that organ in certain Cretan swine which fed upon it.

Ceterach.

1. Portion of fertile frond, showing scaly bark. 2. Ditto, with scales removed.

*çe-the-grande, *çe-te-grande, s. [Lat. *cete*=whale; *grande*=great, large.] The whale.

"Cete grande is a fis,
The moste that in water is."

Bestiary in Old Eng. Miscell., l. 499.

çē-tic, a. [Lat. *cet(e)*=a whale, and Eng. suff. -ic.] Of or pertaining to a whale.

cetic-acid, s.

Chem.: A name given to what was supposed to be a peculiar acid resulting from the saponification of cetin, but which has been found to be only a mixture of margaric acid and cetin.

*çē-ti-çide, s. [Formed from Lat. *cet(e)*=whale; *cædo*=to kill, on the analogy of *parricide*, &c.] A whale-killer. (*Southey: Letters*, vi. 317.)

çē-tin, çē-tine, s. [Fr. *cétine*, from Lat. *cet(e)*, *cet(us)*=a whale, and Eng. suff. -ine (*Chem.*).]

Chem.: The pure, solid, crystalline mass of spermaceti. It is seen in beautiful silvery scales.

çē-ti-ō-sâu'-rī-an, s. The same as *cetiosaurus* (q. v.).

çē-ti-ō-sâu'-rūs, çē-tē-ō-sâu'-rūs, s. [Lat. *cete*=a whale; *saurus*=a saurian.]

Palæont.: A name given by Owen to a genus of fossil Saurians found in the oölitic and cretaceous formations. It belongs to the order Deinosauria. Only one species is known. Its height when standing on all fours must have been ten feet, and its length fifty, sixty, or seventy feet. It was herbivorous.

çē-tōch-il'-i-dæ, s. pl. [Mod. Lat. *cetochil(us)*, and fem. pl. adj. suff. -idæ.]

Zoöl.: A family of marine Entomostraca, belonging to the order Copepoda.

çē-tōch'-i-lūs, s. [Gr. *kētos*=the whale; *chilos*=food.]

Zoöl.: A genus of marine Entomostraca (Crustacea), the typical one of the family Cetochilidae. It is distinguished by the two small styliform appendages to the head, the inferior antennæ being two-branched, the branches nearly equal, the unbranched jaw feet, the six-jointed thorax and four-jointed abdomen, and the last pair of legs being forms like the rest.

çē-tō-lōg'-i-cal, a. [Eng. *cetolog(y)*; -ical.] Pertaining to cetology.

çē-tōl'-ō-gist, s. [Eng. *cetolog(y)*; -ist.] One skilled in cetology.

çē-tōl'-ō-gŷ, s. [Fr. *cétologie*, from Gr. *kētos*=a whale; *logos*=a discourse; *legō*=to tell, to speak.] The science or natural history of the animals known as Cetacea. (*Crabb.*)

çē-tō-ni-a, s. [Etym. doubtful.]

Entom.: A genus of Beetles, the typical one of the family Cetoniidae. *Cetonia aurata*, the Rose-beetle, is a beautiful insect, about three-quarters of an inch long, of a bright-green and sometimes coppery color.

çē-tō-ni-a-dæ, s. pl. [Mod. Lat. *cetonia*; and Lat. fem. pl. suff. -adæ.]

Entom.: The Floral Beetles, a family of Coleopterous insects of great variety and beauty. They live and move among trees, plants, and flowers, which are their natural food. The antennæ are small, ten-jointed; basal joints short, the three terminal joints comparatively long; thorax triangular; elytra straight, and obtusely rounded at the apex. It is one of the most interesting groups of Coleoptera, and all the species have brilliant colors.

çē-tōp'-sis, s. [Gr. *kētos*=a whale; *ops*, genit. *opsis*=a face.]

Ichthy.: A genus of fishes with oblong, round, thick bodies, and short tails; eyes vertical and very minute.

çē-tōt'-ō-lite, s. [From Gr. *kētos*=any sea monster; *ous*, genit. *otos*=ear, and Eng. suff. -ite (*Palæont.*) (q. v.).]

Palæont.: An ear-bone referred to some cetacean mammal. Specimens are found in the Red Crag, which is of Miocene age.

çē-trär'-i-a, s. [Mod. Lat., from Lat. *cetra*, *cetra*=a short Spanish leather shield, from the form and leathery quality of the plant.]

Bot.: A genus of Lichens, tribe Cetrariei. Thallus bright-brown, rigid, erect or ascending, divided into lacinieæ, with shining corticallayer; apothecia dull or bright-brown; spermatia cylindrical. The three best known species are, *Cetraria islandica*, the well-known Iceland-moss [*CARRAGEEN*], *C. Delisei*, and *C. aculeata*. (*Griff. & Henfrey.*)

çē-trär'-ic, a. [Mod. Lat. *cetrar(ia)*, and Eng. suff. -ic (*Chem.*).] Of or belonging to Cetraria or Iceland-moss.

cetraric-acid, s. An acid which forms one of the components of Cetrarine (q. v.).

çē-trär'-i-ei, s. pl. [Mod. Lat. *cetrari(a)*, and Lat. pl. suff. -ei.]

Bot.: A tribe of Lichens, of the family Lichenacei, having the thallus compressed, fruticulose, or membranously dilated; apothecia on the margins of the lacinieæ or lobes. Genera, Cetraria and Platyoma.

çēt'-rär-ine, s. [Mod. Lat. *cetrar(ia)*, and Eng. suff. -ine (*Chem.*).]

Chem.: The bitter principle of the *Cetraria islandica*, or Iceland-moss, which is a mixture of cetraric acid, a fatty acid, and an indistinctly crystalline substance, neither acid nor basic, which has not been properly examined.

çēt'-ule, s. [Lat. *cetus*=a whale; Gr. *hylē*=... matter as a principle of being.]

Chem.: A substance obtained in the state of an oxide in spermaceti; its hydrate corresponds to alcohol, and is termed *ethyl*, from the first letters in *ether* and *alcohol*. Cetule consists of thirty-two atoms of carbon, and thirty-three of hydrogen.

çē-tūs, s. [Lat. *cetus*, from Gr. *kētos*=a whale.]

1. *Zoöl.*: The whale (q. v.).

2. *Astron.*: The Whale, a large constellation in the southern hemisphere. It occupies the greatest space of any in the heavens, and contains ninety-seven stars, of which two are of the second magnitude, eight of the third, nine of the fourth, &c.

çēt'-yl, s. [From Gr. *kētos*=a sea monster, and *hylē*=... matter as a principle of being.]

Chem.: Organic radical, $C_{16}H_{33}$.

çē-tŷl'-ic, a. [From Eng., &c., *cetyl* (q. v.), and suff. -ic.] Derived from or consisting to a greater or less extent of cetyl.

cetylic alcohol, s.

Chem.: $C_{16}H_{33}(OH)$ = Sexdecyl Alcohol = Ethal. Obtained from spermaceti, a crystalline fatty substance found in cavities in the head of *Physeter macrocephalus*. This substance consists of cetyl palmitate $C_{16}H_{33}.C_{16}H_{31}O_2$, which is converted into potassium palmitate and cetyl alcohol by heating it with solid potash. The cetyl alcohol is dissolved out and crystallized from ether. Cetyl alcohol is a white crystalline substance which melts at 50°. Heated with sodium it forms sodium cetylate, $C_{16}H_{33}MO$. Heated with potash-lime it is converted into potassium palmitate.

çēt'-y-wäll, set-wall, s. [CETEWALE.] *Valeriana pyrenaica*; some other species of Valerian (*Britt. & Holland.*)

çēū-tō-rhŷn'-chūs, s. [Gr. *keuthō*=to hide; *rhynchos*=the snout.]

Entom.: A genus of coleopterous insects of the family Curculionidae. Antenna eleven-jointed; basal joint as long as the remainder taken together; club ovate; rostrum sometimes long, bent and filiform, at other times short and straight; thorax attenuated; elytra rounded at extremities, and do not entirely cover the abdomen; extremities of tibiae without spines. The species are very numerous; many are exceedingly small in size. *Ceutorhynchus didymus* is abundant on the common stinging-nettle. When touched, these little beetles roll themselves into a ball, contract the legs, and allow themselves to fall to the ground, when they can with difficulty be distinguished from the mold. Hence they are best captured by sweeping.

çēv'-a-däte, s. [In Fr. *cévadate*, from *cevadilla* (q. v.).]

Chem.: A term for a combination of cevadic acid and a salifiable base.

çē-väd'-ic, a. [From *cevad(illa)* (q. v.), and suff. -ic (*Chem.*).] Of or belonging to the *Veratrum sabadilla*, or caustic barley.

cevadic acid, s. An acid obtained by the action of potash on the fatty matter of the Cevadilla, or Sabadilla plant.

çē-väd-il'-lā, sē-bäd-il'-lā, sa-bäd-il'-lā, s. [From the Spanish-Mexican name *cebadilla*=a little oat; dimin. of *cebada*=oat.]

Bot.: A species of *Veratrum*, the seeds of which have become an article of considerable importance from their containing a considerable quantity of Veratria. [*VERATRIA.*] It is a native of Mexico. The flowers have a smell resembling that of Barberry. The plant is now called *Asagraea officinalis*.

çēv'-a-dīne, s. [From Sp. Mexican *cebada*=an oat, and Eng. suff. -ine.]

Comm.: The starch of barley; the name for nor-deine. (*Nuttall.*)

*çē'-vīl, s. [Etym. unknown.]

Chem.: A Paracelsian name for a certain hard substance in the earth, similar to a calculus in man, indurated from an earthy tartar by the spirit of wine, which is in the liquor of the earth; it is stated to be an appropriate remedy against the formation of stone or gravel in man.

çēy'-lōn, s. & a. [A corruption of Singhalese *Sinhala*, in the word *Sinhala-dwipa*=the island of lions, from Sansc., &c., *sinh*=a lion, the same word which occurs in *Singapore*=the city of lions, and as a title of Sikhs and Rajpoots, as *Goolab Singh*=Goolab the Lion, or the Lion-like Goolab.]

Ceylon-moss, s. The same as JAFNA-MOSS (q. v.)

fāte, fāt, färe, amidst, whāt, fäll, father; wē, wēt, hère, camēl, hēr, thère; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trŷ, Sŷrian. æ, œ = ē; ey = ā. qu = kw.

Çëy-lôn-êşe', a. & s. [From Eng., &c., *Ceylon*; and suff. -ese.]

A. As adj.: Pertaining to Ceylon.

B. As subst.: A native of Ceylon. [CINGALESE.]

çëy'-lôn-ite, çëy'-lan-ite, s. [Fr. *ceylanite*, from *Ceylon*, where it is found.]

Min.: A variety of Spinel (q. v.), from Ceylon; also called *Iron-Magnesia Spinel*. Color, dark-green, brown to black, mostly opaque or nearly so. Specific gravity, 3.5-3.6.

çë'-y'x, s. [The name of a mythic king of Trachinia, son of Lucifer and husband of Alcione. He was drowned as he went to consult the oracle of Claros. His wife was apprised of her loss in a dream, and afterward found his body on the seashore. They were both changed into birds, and called Alcions.]

Ornith.: A genus of birds belonging to the Alcyonidae or Kingfishers.

c fa ut, s. A note in the scale of music.

"Gamut I am, the ground of all accord,

A re, to plead Hortensio's passion,

B mi, Bianca, take him for thy lord,

C fa ut, that loves with all affection."

Shakesp.: *Taming of the Shrew*, iii. 1.

C. G. S. An abbreviation of *Centimeter-gram-second*, the three fundamental units used in dynamical and electrical nomenclature; as the C. G. S. system.

chăb'-a-şie, chăb'-a-şite, s. [Gr. *chabazios*=one of a number of precious stones mentioned in the poem *peri lithôn*=about stones, ascribed to Orpheus.]

Min.: A rhombohedral mineral of a white or flesh-red color; luster vitreous, transparent, or translucent. Hardness, 4-5; specific gravity, 2.08-2.19. Composition: Silica, 45.63-52.20; alumina, 17.44-21.87; lime, 4.24-13.30; soda, 0.25-4.07; potassa, 0.17-3.03; water, 17.98-22.29. It is widely distributed.

chăb'-leau (eau as ô), s. [Fr. *chabler*=to fasten a cable to, to drag.]

Mech.: A middle-sized rope, used to draw craft up a river; a tow-rope.

chăb'-lis (s silent), s. [From the place where it is made.] A white wine made at Chablis, a town in France.

cha-bræ'-a, s. [Named after *Chabré*, a botanist of Geneva.]

Bot.: A genus of garden plants, order Compositæ, sub-order Labiatifloræ. *Chabræa suaveolens* grows wild in the Falkland Islands.

chă'-būk, s. [Hind. *chabuk*=a whip.]

"... 'concerning Feramorz, and literature, and the *chabuk*, as connected therewith.'"—*Moore: Lalla Rookh; The Light of the Haram.*

Water-chadlock: *Nasturtium amphibium*. (Gerarde.)

chă-nô-pleu'-ra, s. [Gr. *chainô*=to open, and *pleura*=the sides.]

Bot.: A genus of West Indian shrubs, of the order Mælostomaceæ.

chă-nôs'-tô-ma, s. [Gr. *chainô*=to open, to gape, and *stoma*=the mouth.]

Bot.: A considerable genus of South African shrubs, belonging to the order Scrophulariaceæ. Leaves dentate, opposite; flowers axillary or racemose, pedicellate; calyx five-parted; corolla deciduous, funnel-shaped; style simple, stigma sub-elevate.

chăr-a-dô'-dī-a, s. [From Gr. *chairô*=to rejoice; second element doubtful.]

Bot.: A genus of endogenous plants, order Amarillidaceæ. A cold infusion of the leaves of *Chæradodia chilensis*, the Thekel of Chili, is used by the natives as a purgative and diuretic.

chă-rô-phyl'-lūm, s. [Gr. *chairô*=to rejoice, and *phyllon*=a leaf, from the agreeable smell of the leaves.]

Bot.: Cicely, or Chervil, a genus of umbelliferous plants of the tribe Scandicnæ. [CHERVIL.]

chăr-ô-pôt'-a-mūs, chër-ô-pôt'-a-mūs, s. [CHERAPOTAMUS.]

chăr-ôp'-sis, chër-ôp'-sis, s. [From Gr. *choiros*=a pig, and *opsis*=aspect.]

Zoöl.: A genus of Pachyderms. Its sole member is the small Liberian Hippopotamus (*Chæropsis liberiensis*) which has only two lower incisor teeth. It comes, as its specific name suggests, from Liberia, in Western Africa.

chă'-ta, s. [Gr. *chaitē*=long, loose, flowing hair . . . a bristle.]

***1. Anat.:** An old term for the hair at the back of the head, and about the temples.

2. Bot.: A bristle. The slender stalk of the spore-case of mosses; also called *Seta* (q. v.).

chă'-ta-chīne, s. [Gr. *chaitē*=long, loose, flowing hair, a bristle.]

Bot.: A small spiny genus, belonging to the order Ulmaceæ, natives of South Africa. It differs from the elm in not having winged fruits. Leaves smooth or downy, oval or elliptical; flowers small and green, male and female on the same plant. The fruit is a small oval nut about the size of a pea.

chă-tăn'-thēr-a, s. [Gr. *chaitē*=a bristle, and *anthera*=an anther.]

Bot.: A genus of plants belonging to the order Compositæ.

chă-te'-teş, s. [From Gr. *chaitē*=long, loose, flowing hair, and suff. -*ētēs*.]

Palæont.: A genus of "Tabulate" corals, the typical one of the family Chætetidæ. It is found from the Silurian to the Permian.

chă-te'-ti-dæ, s. pl. [From Mod. Lat. *chætetes* (q. v.), and fem. pl. adj. suff. -*idæ*.]

Palæont.: A family of "Tabulate" corals, containing species with a compound corallum of closely approximated imperforate corallites without septa. They occur from the lower Silurian to the Permian period.

chă-tô-blēm'-ma, s. [Gr. *chaitē*=hair, a bristle, and *blemma*=the face, looks; *blepō*=to look.]

Ornith.: A genus of birds, belonging to the Lamiadæ or Shrike family, and tribe Dentiostres. They are named from the front of the head being protected by strong thick-set bristly hairs.

chă-tôç-ër'-ôs, s. [Gr. *chaitē*=hair, a bristle, and *keras*=a horn.]

Zoöl. & Palæont.: A genus of marine and fossil Diatomaceæ, having the frustules concatenate; valves equal, sub-cylindrical, with two processes, one on each side, which, in the young state, are very short and tubular, forming very long horns as the frustules become older; horns subsequently converted into very long, thin, and interwoven siliceous filaments. (*Griff. & Henfrey*.)

chă-tô-dër'-mīs, s. [Gr. *chaitē*=a bristle, and *derma*=the skin.]

Ichthy.: A genus of Cheliform fishes, in which the body is entirely covered with sharp prickles intermixed with soft cilia, or lobed appendages. Family Balistidæ, order Plectognathes.

chă-tô-dis'-cūs, s. [Gr. *chaitē*=a hair, a bristle, and *diskos*=a disk.]

Zoöl.: A genus of Diatomaceæ, having the frustules disk-shaped; valves circular or oval, with radiating dots and a submarginal circle of obtuse processes unconnected by means of special radiating lines of dots with the center.

chă'-tô-dôn, s. [Gr. *chaitē*=a bristle; *odontos*=a tooth.]

Ichthy.: A genus of fishes, the typical one of the order Chætodontidæ. The body is oval; the mouth more or less pointed; no spine on the preoperculum, or prickles before the dorsal fin, which is single.

chă-tô-dôn'-tī-læ, s. pl. [Mod. Lat. *chætodon*, and Lat. fem. pl. suff. -*idæ*.]

1. Ichthy.: A family of Acanthopterygious fishes, of great variety and beauty, distinguished from the perches chiefly by the operculum or gill-cover being without prickles. The snout projects, but the mouth is small, generally with bristle-like teeth; the body is compressed and the fins are covered with ctenoid scales. The Chætodonts are generally very beautiful small fishes, bright colored, with vertical black bands. The species mostly inhabit the warmer parts of the ocean. They are all deep-sea fishes.

2. Palæont.: A Chætodont genus, *Platax*, is found in the Eocene tertiary of Mt. Bolca. (*Nicholson*.)

chă-tô-găs'-tră, s. [Gr. *chaitē*=a bristle, a hair, and *gaster*=a belly.]

Bot.: A genus of plants, natives of tropical America, belonging to the order Melastomaceæ. It derives its name from the tube of the calyx being bristly.

chă-tô-glē'-na, s. [Gr. *chaitē*=a hair, a bristle, and *glēnē*=the pupil of an eye.]

Zoöl.: A genus of Infusoria, of the family Peridina. Carapace hispid, or studded with rigid spines; no traverse furrow; an eye-spot present; organ of motion a flagelliform filament. (*Griff. & Henfrey*.)

chă-tôg'-na-tha, s. pl. [From Gr. *chaitē*=long, loose, flowing hair, and *gnathos*=the jaw, the mouth.]

Zoöl.: The name given by Prof. Huxley to a class of anarthrapoda, only one genus of which has yet been discovered, viz., *Sagitta*, or Arrow Worms.

chă-tô-mī'-ūm, s. [Gr. *chaitē*=a hair, a bristle; etymol. of *mium* doubtful.]

Bot.: A genus of Perisporiacei (Ascomycetous Fungi), having a filamentous mycelium bearing superficial roundish or ovate conceptacles clothed with hairs, finally opening above and containing clavate asci with paraphyses; sporidia simple, ovate. The asci in this genus are very delicate, and are readily absorbed, so that frequently there is not a trace of them, and the sporidia seem naked. (*Griff. & Henfrey*.)

chă-tôm'-ôn-as, s. [Gr. *chaitē*=a hair, and *monas*, as a.=solitary; as s.=a unit, the ace point on a die.] [MONAS.]

Zoöl.: A genus of Infusoria, of the family Cyclidina. An oval vibratile organ (whether a flagelliform filament or ring of cilia is uncertain); movement of animal slow, but leaping effected by means of non-vibratile bristles situated upon the body. In putrid animal and vegetable infusions; in dead bodies of other organisms—Closteria, &c. (*Griff. & Henfrey*.)

chă-tô-nô'-tūs, s. [Gr. *chaitē*=a hair, and *notos*=the back.]

Zoöl.: A genus of microscopic aquatic animals, placed by Ehrenberg among the Rotatoria (Rotifera), and by Dujardin with the Infusoria. The three or four species are found in fresh water, among aquatic plants. Their structure requires further investigation. (*Griff. & Henfrey*.)

chă-tôph'-ôr-a, s. [Gr. *chaitē*=a hair; *phoros*=bearing, producing; *pherō*=to bear, to produce.]

1. Bot.: A genus of Chætophoridæ (Conferoid Algæ), characterized like *Draparualdia* by setigerous branched filaments, but differing from the latter by the filaments being imbedded in a gelatinous matrix. The Chætophoræ are found in fresh water, forming little green protuberances on stones, sticks, &c., usually bright green. The zoospores are formed singly in joints, and bear four cilia. (*Griff. & Henfrey*.)

2. Zoöl.: A sub-class or order of Annelida, comprising those in which progression takes place by means of chitinous setæ, or by suctorial disks. Of the former section the Earthworms, Tubeworms, and Sandworms, are examples; of the latter, the Leeches. (*Nicholson*.)

chă-tô-phôr'-ī-dæ, s. pl. [Mod. Lat. *chætophor(a)*, and Lat. fem. pl. suff. -*idæ*.]

Bot.: A family of Conferoid Algæ growing in sea or fresh water, invested with gelatine; either filiform or (a number of filaments being connected

Chætodon Vagabunda.

together) expanded into gelatinous, branched, definitely or shapeless fronds or masses. Filaments jointed, furnished with bristle-like processes. Fructification consisting of spores and four-ciliated zoospores, formed out of the contents of the articulations. (Griff. & Henfrey.)

chæ-tōp'-ōd-a, s. pl. [From Gr. *chaitē*=long flowing hair, and *pous*, genit. *podos*=a foot.] *Zoöl.*: The name given by Prof. Huxley to the Annelid order often called Nereida, from the typical genus Nereis.

chæ-tōps, s. [Gr. *chaitē*=a bristle, a hair, and *ops*=a face.]

Ornith.: A genus of birds, belonging to the Myotherinæ or Ant-thrushes, so named from the bristly feathers in front of the face. Order Merulidæ.

chæ-tōp-sis, s. [Gr. *chaitē*=a hair; *ops*, genit. *opsis*=a face.]

Bot.: A genus of Mucedines (Hyphomycetous Fungi) characterized by erect jointed threads, whorled below, above simple and flagelliform, bearing cylindrical spores from the tips of the branchlets. One species only is known, *Chætopsis Wanchii*. (Griff. & Henfrey.)

chæ-tō-pūs, s. [Gr. *chaitē*=a bristle, a hair, and *pous*=a foot.]

Ornith.: The Francolins, a genus of birds belonging to the Perdiciidæ or Partridges, so named from the tarsus of the male being armed with spurs.

chæ-tō-spör'-a, s. [Gr. *chaitē*=a bristle, a hair, and *spora*=a sporule.]

Bot.: A genus of Algæ, of the order Confervoidæ, so named in reference to the fine capillary divisions of the filaments.

chæ-tōs'-tōm-a, s. [Gr. *chaitē*=a bristle, a hair, and *stoma*=a mouth.]

Bot.: A genus of small, dry, heath-like Brazilian shrubs, belonging to the order Melastomaceæ. Stems leafless at base; flowers solitary, rather small, purple with yellow anthers.

chæ-tu-rā, s. [Gr. *chaitē*=a bristle, and *oura*=a tail.]

Ornith.: A genus of birds of the Hirundinidæ or Swallow family, so named from the shafts of the tail being prolonged into acute points.

chæ-tu-rūs, s. [Gr. *chaitē*=a bristle, a hair, and *oura*=a tail.]

Bot.: A genus of grasses belonging to the tribe Agrostidæ. The only species described, *Chæturus fasciculatus*, is a small annual grass, a native of Spain. It derives its name from the silky appearance of the panicles.

***chaf**, s. [CHAFF.]

chaf-ant, a. [Eng. *chaf(e)*, and suff. *-ant*.]

chafing-board, s.

Naut.: A board fixed to the rigging of a ship to prevent chafing. [CHAFING-GEAR.]

chafing-cheeks, s. pl.

Naut.: A name given by sailors to the sheaves instead of blocks on the yards in light-rigged vessels.

chafing-dish, s. A vessel to make anything hot in; a portable grate for coals.

"... *chafing-dishes*, posnets, and such other silver vessels."—*Bacon: Physical Remains*.

chafing-gear, s.

Naut.: The stuff put upon the rigging and spars to prevent their being chafed, such as mats, sinnet, spun-yarn, strands, battens, &c. (*Smyth*.)

***chăf' -lêt, s.** [Contracted from Fr. *échafaud*; O. Fr. *eschafault*=a scaffold, with dimin. suff. -*let*.] A small scaffold or platform. (*Halliwel: Prince Arthur*, 1634.)

***chăf' -rôn, chăf' -rôn, s.** [CHAMFRAIN.] Armor for the head of a war-horse.

"With a *chafron* of steel on each horse's head, and a good knight on his back."—*Scott: Antiquary*, ch. xl.

cha-gi-ga, s. [Heb. *chagiga*=festivity.]

Jewish Antiq.: A festive offering, not less in value than 2 meahs (16 grains of corn), offered in connection with the Passover. It was one of two peace-offerings. It was generally a sacrificial victim. The name does not come from the Bible, but from the Talmud.

"... the remaining sacrifices to be offered during the paschal week, and especially of the *Chagiga*, which was to be consumed toward the end of the first feast day."—*Strauss: Life of Jesus* (trans. 1846), § 121.

chăg-rēen', s. [SHAGREEN.]

chăg-rîn', s. & a. [Fr. *chagrin*=“carke, melancholy, care, thought” (*Cotgrave*), the origin of which is unknown, but supposed to be connected with *shagreen* (q. v.). According to Trench *chagrin* and *shagreen* were originally but different spellings of the same word. Dryden ridiculed the word, showing that it was of recent introduction when he wrote. (*Trench: Eng. Past and Present*, pp. 44, 65.)]

A. As subst.: Vexation, mortification, ill-humor. “I grieve with the old, for so many additional inconveniences and *chagrins*, . . .”—*Pope: Letters*.

***B. As adj.**: Chagrined, vexed, put out of humor. “Dear, my dear, pity me; I am so *chagrin* to-day.”—*Dryden: Marriage a la Mode*, iii. i.

¶ For the difference between *chagrin* and *vexation*, see VEXATION.

cha-grîn', v. t. & i. [CHAGRIN, s.]

A. Trans.: To vex, to tease, to mortify, to put out of humor.

“Don't do anything to *chagrin* her.”—*Fielding: Intrig. Chamb.*, ii. 3.

***B. Intrans.**: To be vexed, annoyed, or put out of humor.

“I would not have your ladyship *chagrin* at my bride's expression.”—*Fielding: Love in Sev. Masques*.

chă-grîn'ed, pa. par. or a. [CHAGRIN, v.]

chăil-lêt' -î-a, s. [Named in honor of M. Chaillet.]

Bot.: A genus of plants, the typical one of the order Chailletaceæ. The species are small shrubs, and are principally natives of Brazil. The seeds of *Chailletia toxicaria*, a native of Sierra Leone, are called by the colonists Ratsbane, and are used for poisoning rats.

chăil-lêt' -î-ă-çē-æ, s. pl. [From Mod. Lat. *chailleti(a)*, and Lat. fem. pl. suff. -*acæ*.]

Bot.: A family of Dicotyledons, consisting of shrubs with alternate bistipulate, short-stalked, oval, acute, feather-nerved, entire leaves; flowers axillary, white, usually with the peduncles adhering to the petioles. There are nearly seventy species, natives of the tropics, and distributed into four or five genera, of which the principal are Chailletia, Moacurra, and Tapura.

chăin, *chăine, *chayne, *chaine, *cheyne, *chine (Eng.), *chenzie, *chenyie (Scotch), s. & a. [O. Fr. *cadene, chaine, chaine*; Fr. *chaîne*; Ital. *catena*; Lat. *catena*; M. H. Ger. *kētene*; O. H. Ger. *kēтина, chētinna*; Ger. *ketten, kette*.]

A. As substantive:

1. Ordinary Language:

i. Literally:

(1) A line formed of a series of metal links connected with or fitted into each other, and used for various purposes, as of restraint, support, connection, transmission of mechanical power, &c.

“*Cheyne. Cathena, boia*.”—*Prompt. Parv.*

(2) A series of links of gold or silver, worn as an ornament.

“And Pharaoh took off his ring, and put it upon Joseph's hand, and put a gold *chain* about his neck.”—*Genesis* xli. 42.

(3) (*Pl.*) Fetters, bonds, manacles.

“Petre was slepinge bitwixe twey knyghtis, boundene with twey *chaynes*.”—*Wycliffe: Deeds*, xii. 6.

2. Figuratively:

(1) Anything which confines, fetters, or binds.

“Rivet the *chains* of habit.”—*Lamb: Elia*.

(2) A state of subjection or moral captivity.

“A Briton's scorn of arbitrary *chains*.”

Couper: Table Talk.

(3) A series of material things connected with and following each other in succession.

“The *chain* of fortifications which Diocletian and his colleagues had extended along the banks of the great rivers, . . .”—*Gibbon: Decline and Fall*, ii. 45.

“From the *chain* of Taurus to the shores of the Euxine.”—*Arnold: Hist. Rome*, ch. 35.

(4) A connected series or line of immaterial things, as of events, causes, thoughts, or arguments.

“Here no *chain* of succession could be pleaded.”—*Fuller: Church History*, bk. iii.

II. Technically:

1. *Surveying*: A line formed of a series of iron links, used in measuring land. That now used is known as Gunter's chain, from the name of the inventor. It is 66 feet long, and divided into 100 links, each link being equal to 7.92 inches. Ten square chains are equal to one acre.

2. *Sporting*: The trail of an otter.

3. *Naut. (chains, properly chain-wales, or chains)*: Broad and thick planks projecting horizontally from the ship's outside, to which they are fayed and bolted, abreast of and somewhat behind the masts. They are formed to project the chain-plate, and give the lower rigging greater out-rig or spread, free from the topsides of the ship, thus affording greater security and support to the masts, as well as to prevent the shrouds from damaging the gunwale, or being hurt by rubbing against it. Of course they are respectively designated fore, main, and mizzen. They are now discontinued in many ships, the eyes being secured to the timber-heads, and frequently within the gunwale to the stringers or lower shelf-pieces above the water-way. In the *chains* applies to the leadsmen, who stand on the channels between two shrouds to heave the hand-lead.

“... tossed it into the main *chains*, to the man who had thrown the stern-fast.”—*Marryat: Midship. Easy*.

4. *Weaving*: The warp threads of a web. It is called also *fitting* or *hoist*, and in the case of silk it is denominated organzine.

¶ Crabb thus distinguishes between a *chain*, a *fetter*, a *band*, and a *shackle*: “All these terms designate the instrument by which animals or men are confined. *Chain* is general and indefinite; all the rest are *chains*; but there are many *chains* which do not come under the other names; a *chain* is indefinite as to its make; it is made generally of iron rings, but of different sizes and shapes; *fetters* are larger, they consist of many stout *chains*; *bands* are in general any thing which confines the body or the limbs; they may be either *chains* or even cords; *shackle* is that species of *chain* which goes on the legs to confine them; malefactors of the worst order have *fetters* on different parts of their bodies, and *shackles* on their legs. These terms may all be used figuratively. The substantive *chain* is applied to whatever hangs together like a *chain*, as a *chain* of events; but the verb *to chain* signifies to confine as with a *chain*; thus the mind is *chained* to rules, according to the opinions of the free-thinkers, when men adhere strictly to rule and order; and to represent the slavery of conforming to the establishment, they tell us we are *fettered* by systems. *Band* in the figurative sense is applied, particularly in poetry, to every thing which is supposed to serve the purpose of a *band*; thus love is said to have its silken *bands*. *Shackle*, whether as a substantive or a verb, retains the idea of controlling the movements of the person, not in his body only, but also in his mind and in his moral conduct; thus a man who commences life with a borrowed capital is *shackled* in his commercial concerns by the interest he has to pay, and the obligations he has to discharge.” (*Crabb: Eng. Synon.*)

¶ *Chain of locks*:

Hydraulic Engineering: A succession of lock-chambers, the lower pair of gates of each of which (except the lowest) forms the upper pair of gates for the chamber below. [CANAL-LOCK.]

B. As adj.: (See the compounds.)

chain-belt, s.

1. A chain forming a band or belt for the conveyance of power.

2. A chain covered with piping or overlaid with strips to form a round belt.

chain-boat, s. A boat used in harbors for recovering chain-cables and anchors.

chain-bolt, s.

1. *Naut.*: A large bolt to secure the chains of the dead-eyes through the toe-link, for the purpose of securing the masts by the shrouds. Also the bolts which fasten channel-plates to the ship's side.

2. *Carp.*: A bolt having an attached chain by which it may be drawn back, falling by its own gravity or pushed into place by a spring.

chain-bond, s. The tying together of parts of a wall by a chain or iron bar built in.

chain-bridge, s.

1. A form of ferry-bridge in which the passage is made by means of chains laid across the river and anchored on each side, and moving over chain-wheels on board, driven by engines. [FERRY-BRIDGE.]

2. An early form of the suspension-bridge in which catenary chains supported the floor. The first was erected over the Tees, in 1741. Rods with eyes and connecting-links were used by Telford on the Menai Suspension Bridge, 1829; steel wires laid up into cables are now used. [SUSPENSION-BRIDGE.]

***chain-bullets, s. pl.** [CHAIN-SHOT.]

“My friend and I
Like two *chain-bullets*, side by side, will fly
Thorow the jaws of death.”

Heywood: Challenge for Beautie, 1636.

chain-cable, s.

Naut.: A cable made of iron links. They are not new; Cæsar found them on the shores of the British Channel. *Smyth*, in his *Sailor's Word-Book*, says that in 1818 he saw upward of eighty sail of vessels with them at Desenzano, on the Lago di Garda. They have almost superseded hemp cables. They are divided into parts fifteen fathoms in length, which are connected by shackles, any one of which may be slipped in emergency; at each 7½ fathoms a swivel used to be inserted, but in many cases they are now dispensed with. Chain-cables are generally made in lengths of from 12½ to 25 fathoms; each length is usually provided with a swivel. The lengths are joined together by shackles (q. v.). A cable's-length is 100 fathoms of 6'08 feet each, and is one-tenth of a nautical mile. Chain-cables are stowed in chain-lockers, generally near the mainmast, or just before the engine and boiler compartment.

Chain-cable compressor: A curved arm of iron which revolves on a bolt through an eye at one end. At the other is a larger eye in which a tackle is hooked; it is used to bind the cable against the pipe through which it is passing and check it from running out too quickly.

Chain-cable controller: A contrivance for the prevention of one part of the chain riding on another while heaving in.

Chain-cable shackles: Used for coupling the parts of a chain-cable at various lengths, so that they may be disconnected when circumstances demand it.

chain-coral, s. An elegant European species of fossil, *Catenipora escharoides*.

chain-coupling, s.

Railroad Engineering:

1. A supplementary coupling between cars, as a safety-device in case of accidental uncoupling of the prime connector.

2. A shackle for a chain whereby lengths are united as in a chain-cable, or a shackle or clevis to unite a chain with an object.

chain-fastening, s. A sailor's bend, or cable mooring.

chain-gang, s. A gang or number of persons chained together, in order to prevent the escape of any one. Another mode of countering chain-gangs is to attach to the ankles of each prisoner a short chain, with a heavy iron ball at the end. This is a mode of punishment yet in vogue in some of our cities, where the gangs are made to clean the streets.

chain-gear, s. A form of cog-gearing in which an open linked chain catches up the cogs or sprockets of the wheel, and is the means of motion thereof, or conversely. [CHAIN-WHEEL.]

chain-guard, s.

Hor.: A mechanism in watches provided with a fusee, to prevent the watch being overwound.

chain-harrow, s.

chain-knot, s.

1. A succession of loops on a cord, each loop in succession locking the one above it, and the last one locked by passing through it the end of the cord.

2. A kind of knot used in splicing. [KNOT.]

3. The loop-stitch of some sewing-machines. [STITCH.]

chain-lifter, s.

Naut.: A cast-iron grooved rim, with projections, situated at the foot of the capstan-barrel, and forming the drum around which the chain-cable is wound in weighing anchor.

chain-locker, s. The same as *chain-well* (q. v.).

Chain-locker pipe:

Naut.: The iron-bound opening or section of pipe passing through the deck, and through which the chain-cable passes to or from the locker in which it is stowed.

chain-mail, s. A kind of armor made of interlaced rings or links.

chain-molding, s.

Arch.: A kind of molding used in the Roman style, made in imitation of a chain.

chain-pier, s. A pier which runs out into the sea and is supported by chains like a suspension-bridge.

chain-pin, s.

Surveying: The wire pin, having a loop at one end and pointed at the other, employed by surveyors for marking the termination of each chain in measuring distances.

chain-pipe, s. An aperture through which a chain-cable passes from the chain-well to the deck above.

chain-plates, s. pl. Plates of iron with their lower ends bolted to the ship's sides under the channels, and to these plates the dead-eyes are fastened; other plates cap over and secure them below. Formerly, and still in great ships, the dead-eyes were linked to chain-pieces, and from their being occasionally made in one, they have obtained this appellation.

chain-pore, s. & a. (See the compound.)

Chain-pore coral: The book-name for the zoological genus *Catenipora*.

chain-pulley, s. A pulley having pockets or depressions in its periphery, in which lie the links, or alternate links, of a chain which passes over it and gives motion thereto, or conversely.

chain-pump, s. One form consists of an endless chain passing around a wheel above and descending into the water below. In its upward course it passes through a vertical tube whose lower end is submerged, and at whose upper end the water is discharged. Along the chain are round disks or buttons, which fit in the bore of the tube, and form pistons which elevate the water as the chain ascends in the tube. The cellular pumps are of this kind, and when packed pistons are used, they are termed *paternoster pumps*, from the resemblance of the chain and buttons to the rosary.

chain-rule, s.

Arith.: A theorem for solving numerical problems by composition of ratios or compound proportion.

chain-saw, s.

1. *Surg.*: A saw whose teeth are jointed links, used in making sections in deep-seated places, by passing the saw around the bone and then back again, so as to give command of both ends to the operator, who draws the ends back and forth.

2. One form of band-saw or scroll-saw is also made of separate teeth pivoted or hooked together.

Chain-saw carrier:

Surgery: A hinged and hooked instrument whereby the end of the chain-saw, or a ligature, by which the saw may be drawn, is passed beneath a deep-seated bone, and so far up on the other side as to be grasped by a forceps.

chain-shot, s. Two balls connected either by a bar or chain, formerly used for cutting and destroying the spars and rigging of an enemy's ship. Invented by Admiral De Witt in 1666. (*Knight*.) Now disused, as barbarous and contrary to national ethics.

"In sea fights oftentimes, a buttock, the brawn of the 'hig', or the calf of the leg, is torn off by the *chain-shot*, and splinters."—*Wiseman: Surgery*.

chain-slings, s. pl. Chains attached to the sling-hoop and mast-head, by which a lower yard is hung. Used for boat or any other slings demanded.

Chain-shot.

chain-stitch, s.

1. An ornamental stitch resembling a chain.

2. (*In sewing-machines*): A loop-stitch, in contradistinction to a lock-stitch. It consists in looping the upper thread into itself, on the under side of the goods; or using a second thread to engage the loop of the upper thread.

chain-stopper, s. A stopper for a chain-cable (q. v.).

chain-timber, s.

1. A timber of large dimensions placed in the middle of the height of a story, for imparting strength.

2. A bond timber in a wall.

chain-top, s. A chain to sling the lower yards in time of battle, to prevent them from falling down when the ropes by which they are hung are shot away.

chain-towing, s. A method of towing ferry or canal boats by means of a chain which is laid in the bottom of the watercourse, but with one end on the deck of the boat, where it is wound round a windlass as the boat advances. It was first introduced by Marshal Saxe in 1732, in France, for transporting war material.

chain-wales, s.

Shipbuilding: One of the wales or thick planks bolted to the ship's sides and serving for the attachment of the chains to which the shrouds are connected. [CHANNEL.]

chain-well, s. A receptacle below deck for containing the chain-cable, which is passed thither through the deck-pipe. It is also called a *CHAIN-LOCKER*.

chain-wheel, s. The sprockets on the wheel are adapted to receive the links of the chain successively. The power may be communicated by the wheel to the chain, or conversely.

chain-work, s.

1. *Ordinary Language*:

(1) Work with open spaces like the links of a chain. "Nets of chequer-work, and wreaths of *chain-work*, for the chapters which were upon the tops of the pillars."—*1 Kings vii. 17*.

(2) Applied to articles of manufacture in which cordage or thread is linked together in manner of a chain.

2. *Technically*:

(1) *Hosiery*: (See extract.)

"This texture [stocking-knitting] is totally different from the rectangular decussation which constitutes cloth, . . . for in this . . . the whole piece is composed of a single thread united or looped together in a peculiar manner, which is called stocking-stitch, and sometimes *chain-work*."—*Ure: Dictionary of Arts, Manufactures, and Mines*.

(2) *Naut.*: Chains laid over the sides of vessels, in order to deaden the effects of shot or shell.

ghāin, *ghaeynyn, v. t. [CHAIN, s.]

ghāin'-lēss, a. [Eng. *chain*; -less.] Free from chain, unfettered.

chainless bicycle, s. A bicycle operated by means of a shaft and bevel-gear or by any other device excepting that of the chain and sprocket. The first patent on the application of a bevel gear to a bicycle was granted in 1885, and by the beginning of 1898 there had been over 300 patents for chainless bicycles taken out in the U. S. and England. Two popular types of the chainless bicycle are the "bevel-gear" and the "pinwheel-gear." In the former type, at the pedals, where the ordinary sprocket wheel is located on a chain-bearing wheel, is a small bevel-gear wheel turning another at right angles to it, and fastened to the end of a small steel shaft. The shaft runs through the center of a hollow piece of the frame tubing to the axle of the rear wheel, to which a reverse pair of gears transmits the motion of the pedals. This little shaft is mounted at each end on a ball bearing of the latest construction and minimum friction. Gear wheels, shaft and all are inclosed in a water-and dust-proof case, which is filled with oil to make the running easy. The driving mechanism of the "pinwheel-gear" bicycle consists of three gear wheels arranged in a row and working on each other. One is attached to the pedal shaft like an ordinary sprocket wheel, the second is a large one, which reaches nearly to the rear axle, and the third is on the rear axle itself. The large middle wheel is hollow in the center and is supported on a row of balls around the entire inside, giving an extremely easy running bearing. This train of gears is all enclosed in a water and dust proof casing filled with oil. This bicycle is not quite so prepossessing in appearance as is the bevel-gear machine, on account of the large middle gear wheel, but is more attractive than the chain wheels in use. [BICYCLE.]

ghāin'-lēt, s. [Eng. *chain*, and dimin. suff. -let.] A little chain.

***ghāipes, ghā'-pīs, s. pl.** [CHEAP.] Price, rate, established value of goods.

"The *chaipes* of the country, the ordinary rate, the average price . . ."—*Gl. Sibb.*

ghāir, *ghaier, *ghaier, *ghayer, *ghaere, *ghayre, *ghayere, s. & a. [O. Fr. *chaïere, chaere*; Fr. *chaïre*; Port. *cadeira*; Wel. *cadair*, from Lat. *cathedra*=a chair.] [CATHEDRAL.]

A. *Assubstantive*:

I. *Ordinary Language*:

1. *Literally*:

(1) A movable seat with a back, intended to accommodate one person.

(2) A kind of carriage. Originally a sedan; now a small carriage for a single person, an invalid; a Bath-chair.

2. *Fig. (Chair or chair-day)*: The evening or close of life.

II. *Technically*:

1. A vehicle for one person, carried by two men. [SEDAN-CHAIR.]

2. The seat of the president of an assembly; a seat of authority or dignity, as, the *chair of state*.

4. *Engineer.*: An iron block or socket used upon railways to support and secure the rails.

*5. A vehicle drawn by one horse.

B. *As adjective*: (See the compounds.)

¶ Obvious compounds: *Chair-back, chair-bottom chair-maker*.

Chair-back machines: These machines may be band or jig-saws, which cut out the curved back-piece which is placed on the top of the pillars of the chair-back. Molding or rounding machines for chair-backs have a holder for the stuff, which is moved against a rotary cutter of peculiar shape, the stuff traveling in a prescribed path, so as to receive the conformation desired.

chair-bed, s. A bed or chair which folds up or down at will so as to be used either as a bed or chair.

chair-board, s. [CHAIR-RACK.]

chair-bolt, s. A screw-bolt for fastening down rail-chairs to the sleepers.

chair-maker, s. A maker of chairs.

Chair-maker's saw:

1 A diminutive form of the ordinary framepit saw, in which the blade is strained by buckles and wedges. The work is clamped to the bench while sawing.

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camēl, hēr, thēre; pine, pīt, sīre, sīr, marīne; gō, pōt, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rūle, fāll; trȳ, Sȳrian. æ, œ = ē; ey = ā. qu = kw.

2. A scroll-saw especially adapted for getting out chair-stuff, such as backs and legs which have curves which cannot be readily bent, or of stuff which cannot be readily bent to shape.

chair-organ, s.

Music: A choir-organ placed in a separate case in front of the great organ and at the back of the performer.

chair-rack, s.

Carpent.: A molding round a room, on which the chairs rest so as to keep them from the wall.

chair-seat, s. The seat of a chair.

Chair-seat boring-machine: A machine for the systematic and rapid boring of the small vertical holes in a chair-seat frame, to be occupied by the strips of cane or rattan, or the larger holes for the pillars and spindles of the back.

Chair-seat machine: Various machines. *Spec.*, a planing one, for rounding out the bottoms of the chairs, or one for cutting grooves in the chair-seat.

chair-spring, s.

Upholstery: A spring underneath the hinged seat of a chair, which gives it a certain resilience, and encourages a tilting or rocking motion.

chair-web, s. A scroll-saw.

çhâir, *çhayre, v. t. [CHAIR, s.]

1. To install.

"Chayred or stalled, cathedratus."—Huloet.

2. To carry about in a chair in triumph; a compliment frequently paid in former times to a candidate at an English election by his supporters and admirers.

çhâired, pa. par. or a. [CHAIR, v.]

çhâir'-îng, pr. par., a. & s. [CHAIR, v.]

A. & B. As pr. par. & particip. adj.: (See the verb.)

C. As subst.: The act of carrying in a chair.

çhâir'-man, s. [Eng. *chair*, and *man*.]

1. One who takes the chair at a meeting; the president of an assembly.

"In assemblies generally one person is chosen *chairman* or moderator, to keep the several speakers to the rules of order."—Watts.

2. The president of a company or society.

*3. One whose trade it was to carry a sedan-chair, or wheel a Bath-chair.

¶ The elected chairman or president of the House of Representatives is called the Speaker. [SPEAKER.] When the house resolves itself into committee of the whole [COMMITTEE] the Speaker vacates the chair, which is taken by some other member who is called the Chairman of Committee.

çhâir'-man-ship, s. [Eng. *chairman*; -ship.] The position or office of a chairman; the time during which any one is chairman.

çhâise, s. & a. [Fr. *chaise*=a seat, a chair; a Parisian pronunciation of *chaire*.] [CHAIR.]

A. As substantive:

1. *Lit.:* A light two-wheeled carriage, to accommodate two persons, drawn by one horse, and provided with a calash top.

A. As adj.: Having the property or quality of removing stiffness or rigidity of the body.

B. As subst.: A medicine having the power or quality described under A.

çhal-ă'-za, çhal-ă'-ze, s. [Gr. *chalaza*=(1) hail; (2) a pimple.]

1. *Bot.:* That part of the seed where the nucleus joins the seminal integuments; it represents the base of the nucleus, and is invariably opposite the end of the cotyledons.

2. *Veterinary:* A disorder to which swine are very subject, which causes the flesh to be full of tubercles.

3. *Physiol.:* The treddle of an egg, or the knotty kind of string at each end, whereby the yolk and white are connected together.

4. *Med.:* The same as *Chalazium* (q. v.).

çha-lăz'-al, a. [CHALAZA.] Of or pertaining to chalaza.

çha-lăz'-i-üm, s. [Gr. *chalaza*=hail (from the size and shape).]

Pathol.: A small tubercle on the eyelid, commonly called a styte.

çhăl'-bôt, çha'-bôt, s. [From Fr. *chabot*, dimin. of *cab* or *chab*=a head. (Littré).]

Her.: A name given in blazonry to the fish called Bullhead, or Miller's Thumb.

çhăl-căn'-thite, s. [Gr. *chalkos*=brass; *anthos*=a flower, and Eng. suff. -ite (Min.).]

Min.: A triclinic mineral; color blue, of different shades, sometimes a little greenish; subtransparent or translucent; hardness, 2.5; specific gravity, 2.213. Composition: Sulphuric acid, 32.1; oxide of copper, 31.8; water, 36.1.

çhăl-çê-dôn'-ic, a. [Eng. *chalcedony* (y): -ic.] Of or pertaining to chalcedony. (Brande.)

çhăl-çêd'-ôn-ÿ, s. [Lat. *calcedonius*. From Chalcedon, Gr. *chalkêdôn*; *kalkêdôn*, a town in Asia Minor.]

1. *Min.:* A cryptocrystalline variety of quartz, having the luster nearly of wax, and either transparent or translucent. Color, white, grayish, pale-brown to dark-brown or black; tendon-color common; sometimes delicate blue. Also of other shades, and then having other names. It is a true quartz with some disseminated opal-quartz. Composition: Silica, 98.87; sesquioxide of iron, 0.53; carbonate of lime, 0.62. (Dana.)

2. *Scrip.:* It is not quite certain that the *chalcedony* of Rev. xxi. 19 is the mineral now designated by that name. The probabilities, however, are in favor of its being so.

"The first foundation was a jasper; the second, a sapphire; the third, a *chalcedony*."—Rev. xxi. 19.

¶ Chalcedony of different colors, arranged in stripes or layers, is called *agate*; if the stripes or layers are horizontal it is called *onyx*; *chrysoprase* is green chalcedony, *carnelian* a flesh-red, and *sard* a grayish-red variety. (See these words.)

çhăl-çêd'-ôn-ÿx, s. [Eng. *chalcedony*.] and *onyx*.]

Min.: The name applied to those agates in which opaque white chalcedony alternates with the translucent gray variety.

çhăl-çî-dæ, çhăl-çîd'-i-dæ (1), s. pl. [Gr. *chalkizō*=to shine like brass, and Lat. fem. pl. suff. -idæ.]

Zoöl.: A family of saurian reptiles, of which Chalcis or Chalcides is the type. They have long snake-like bodies. There are, however, four minute feet. All are found in various parts of this country.

çhăl-çî-dêş, s. [Gr. *chalkizō*=to shine like brass.]

Palæont.: A genus of four-legged saurian reptiles, of the family Scincidae. They are covered with rectangular scales.

çhăl-çîd'-i-dæ (2), s. [From Gr. *chalkizō*=to shine or ring like brass.]

Entom.: A family of hymenopterous insects, generally small in size. Antennæ nearly always geniculated, sometimes pedinated; body and limbs ornamented with brilliant metallic colors. Some species are wingless. They are parasitical in their larva state.

çhăl'-çî-huîtl, s. [Native Mexican name.]

Min.: A mineral, identified by Pumpelly with *jadeite* (q. v.), and by Blake with *turquoise* (q. v.). (Dana.)

çhăl-çî-têş, s. [From Gr. *chalkitês*=containing copper, coppery.]

Ornith.: A genus of birds belonging to the Cuculinae, or parasitic Cuckoos, family Cuculidae. They are adorned with plumage of a brilliant metallic luster.

çhăl-çî-tis, çhăl-çî-têş, s. [Gr. *chalkitis*=the name of a mineral.]

Min.: A disintegrating pyrites, iron or copper, impregnated with vitriol. (Dana.)

çhăl'-cô-çite, s. [Gr. *chalkos*=brass; Eng. suff. -ite (Min.).]

Min.: An orthorhombic mineral of a lead-gray color, often tarnished with blue or green. Hardness, 2.5-3. Specific gravity, 5.5-5.8. It occurs in Cornwall, Scotland, and many other localities. Composition: Sulphur, 19.00-21.90; copper, 71.31-79.50; iron, 0.28-0.49. (Dana.)

çhăl'-cô-dite, s. [From Gr. *chalkoeidês*=like brass or copper, and Eng. suff. -ite (Min.). (q. v.).]

Min.: A variety of Stilpnomelane (q. v.). It consists of minute flexible scales of submetallic luster.

çhăl'-cô-grăph, s. [From Gr. *chalkos*=copper, and *graphê*=a drawing or delineation.] An engraving on copper or brass.

çhăl-côg'-raph-ēr, s. [Gr. *chalkographos*=an engraver: *chalkos*=brass, copper; *graphō*=to write, to engrave.] One who engraves on brass, copper, or other metal.

†çhăl'-cô-grăph'-ic, a. [Gr. *chalkos*=brass, copper; *graphikos*=pertaining to writing or engraving; *graphō*=to write, engrave.] Pertaining to or connected with chalcography.

"We shall now give the names of *chalcographic* artists, according to the date of their proficiency."—Encyclopædia Britannica.

çhăl-côg'-raph-ist, s. [Eng. *chalcograph*; -ist.] The same as CHALCOGRAPHER. (Ash.)

çhăl-côg'-raph-ÿ, s. [Gr. *chalkographia*=engraving on brass or copper; *chalkos*=brass, copper; *graphō*=to write, to engrave.] The art or process of engraving on brass, copper, or other metal.

"Chalcography, or engraving, properly so called, executed with a graver."—Encyclopædia Britannica.

çhăl'-cô-lite, s. [From Gr. *chalkos*=copper, and *lithos*=a stone.]

Min.: An obsolete and erroneous name given by Werner to Torbernite, which is an ore of uranium and not of copper. (Dana.) The *British Museum Catalogue* retains it as a recent species, and makes it a synonym of Cuprouranite (q. v.).

çhăl-côm'-ên-ite, s. [Gr. *chalkos*=brass, copper; *mên*=the moon; and Eng. suff. -ite (Min.).]

Min.: A mineral found in small green crystals in the Argentine Republic, associated with selenite of lead. It appears to be a new selenite of copper. Discovered in April, 1881, by MM. des Cloizeaux and Damour. (Athenæum, May 28, 1881.)

çhăl-cô-nô-tūs, s. [Gr. *chalkos*=brass, copper; *notos*=back.]

Entom.: A genus of coleopterous insects of the family Scarabæidae.

çhăl-cô-phă'-site, s. [From Gr. *chalkos*=copper; *phasis*=an appearance, and Eng. suff. -ite (Min.).]

Min.: The same as LIROCONITE (q. v.).

çhăl-cô-phÿl'-lite, s. [Gr. *chalkos*=brass, copper; *phyllon*=a leaf, from the shape of the crystals, and Eng. suff. -ite (Min.).]

Min.: A rhombohedral transparent or translucent mineral, from Cornwall and Saxony, of an emerald-green or grass-green color. Hardness, 2.0. Specific gravity, 2.4-2.66. Composition: Arsenic acid, 17.51-21.27; oxide of copper, 44.45-58.0; water, 21.0-31.19. (Dana.)

çhăl-cô-pÿ'-rite, s. [Gr. *chalkos*=brass, copper; and Eng. *pyrite* (q. v.).]

Min.: A sulphide of copper and iron containing 2 of copper, 2 of iron and 4 of sulphur=sulphur, 34.9; copper, 34.6; iron, 30.5. It is of a metallic luster, of a brass-yellow color, frequently iridescent. It is opaque. Found largely in the Cornwall (England) mines, where 150,000-160,000 tons of ore are smelted annually. Hardness, 3.5. Specific gravity, 4.1-4.3. (Dana.)

bôil, bôÿ; pôut, jôwl; cat, çell, chorus, çhin, bench; go, gem; thin, this; sin, aş; expect, Xenophon, exist. ph = f. -cian, -tian = şan. -tion, -sion = şhün; -tîon, -şion = zhün. -tious, -cious, -sious = şhüş. -ble, -dle, &c. = bël, dël.

chāl-cō-pŷr'-rhō-tīte, s. [From Gr. *chalkos*=copper; *pyrrhotēs*=redness, and Eng. suff. *-ite* (Min.) (q. v.).]

Min.: A variety of Pyrrhotite (q. v.). (*Brit. Mus. Cat.*)

chāl-cō-sī'-dēr-īte, s. [From Gr. *chalkos*=copper; *sidēros*=iron, and Eng. suff. *-ite* (Min.) (q. v.).]

Min.: A variety of Dufrenite (q. v.). (*Brit. Mus. Cat.*)

***chāl'-cō-sīne, chāl'-cō-sīte**, s. [From Gr. *chalkos*=copper, and Eng. suff. *-ine* (Min.).]

Min.: The same as COPPER GLANCE.

chāl'-cō-stīb-īte, s. [From Gr. *chalkos*=copper; *stibi*=tin, and Eng. suff. *-ite* (Min.) (q. v.).]

Min.: An opaque orthorhombic mineral of a metallic luster, and a color between lead-gray and iron-gray. Hardness, 3-4. Specific gravity, 4.748-5.015. Composition: Sulphur, 25.7; antimony, 48.9; copper 25.4. It occurs at Wolfsberg, in the Hartz mountains, and at Guadiz, in Spain. (*Dana.*)

chāl'-cō-trīch-īte, s. [Gr. *chalkos*=brass, copper; *trīch*, genit. *trīchos*=hair, and Eng. suff. *-ite* (Min.).]

Min.: A name applied to the hair-like forms of red oxide of copper, commonly known as plush copper ore.

Chāl-dā'-īc, a. & s. [Lat. *Chaldaicus*=pertaining to Chaldea.]

A. As adj.: Of or pertaining to Chaldea.

B. As substantive:

1. A native or inhabitant of Chaldea.
2. The language of the Chaldeans, Chaldee.

Chaldaic Christians, s. pl. [So named because their head church is in what was anciently termed Chaldea.]

Ch. Hist.: The chief name given in the East to the interesting sect more commonly known in the West as Nestorians. In parts of India they are called St. Thomas Christians, from the erroneous notion that they were first converted to Christianity by the Apostle Thomas. Their patriarch resides in a monastery near Mosul, not far from the site of ancient Nineveh. Like Nestorius, they attribute to Jesus two natures, each with its own personality. They reject image worship. In their liturgic services they employ the Syriac language. When first they arose, in the fifth century, they were persecuted by the Eastern Church, but after the rise of the Arabian "prophet" they found favor with the Mohammedans, whose policy it was to support all detached sects against the Catholic Church which they feared. Afterward they became so noted for missionary work as to elicit the admiration even of the historian Gibbon. Within the present century they have suffered severely from Mohammedan fanaticism. American and other missionaries have also diffused Protestantism among them. One of these Americans, Rev. Asahel Grant, wrote a book which excited some attention, in which he maintained that the "Nestorians" were originally of Jewish descent, deriving their origin from the ten lost tribes.

†Chāl-dā'-īsm, s. [Eng. *Chaldaic*; *-ism*.] An idiom or peculiarity of the Chaldean language.

Chāl-dē'-ān, a. & s. [Lat. *Chaldaeus*=pertaining to Chaldea.]

A. As adj.: Of or pertaining to Chaldea.

B. As subst.: A native or inhabitant of Chaldea.

Chāl'-dēe, a. & s. [Lat. *Chaldaeus*=pertaining to Chaldea.]

A. As adj.: Of or pertaining to Chaldea; Chaldee.

B. As substantive:

1. A native or inhabitant of Chaldea.
2. The language or dialect of the natives of Chaldea.

"The names of the points or accents are all of a late original, all *Chaldee*, not any Hebrew."—*Br. Walton: Considerator Considered*, p. 247.

Chaldee paraphrase, s. Another name for the Targum, of which there are three kinds, viz., that of Onkelos, that of Jonathan, son of Uzziel, and that of Jerusalem. [TARGUM.]

chāl'-dēr (1), s. [CHALDRON.]

1. An English dry measure of uncertain quantity, ranging in different substances from 36 to 70 bushels.

2. *Naut.*: A rudder-band or gudgeon. (*Ogilvie.*)

***chal'-dēse, cāl'-dēse, v. t.** [From Eng., &c., *Chald*(ee), and suff. *-ese*.] To trick, as a Chaldean conjuror might do.

"He stole your cloak, and picked your pocket, Chous'd and caldes'd you like a blockhead."

Butler: Hudibras, II. iii. 1009-10.

chāl'-drīck, chāl'-dēr (2), s. [Icel. *tjald*=the oyster-catcher.] The name given in the Orkney Islands to the Sea-pie, *Hoematopus ostralegus* (Linn.).

chāl'-drōn, chāl'-dēr (3), s. [O. Fr. *chauldron*; Fr. *chaudron*.] [CHALDRON.]

Comm.: An English dry measure, formerly used for any dry goods, but now confined exclusively to coal and coke. It varies in value in different places. In this country, except in New York, it is 2,940 lbs. In New York it is 2,500 lbs.

***chāl'-ēnge, s. & v.** [CHALLENGE.]

chāl'-ē-pūs, s. [Gr. *chalepos*=savage.]

Entom.: A genus of coleopterous insects of the tribe Cassidaceæ.

chāl'-et' (et as ā), s. [French.] A small house or villa on a mountain; a Swiss cottage.

***chāl'-ēr, s.** [Apparently a corruption of *chaffer*.] A chafing-dish.

"Item a grete round ball, in maner of a *chalfer*, of silver ouregilt."—*Collect. of Invent.*, p. 10.

chāl'-īce, *cal'-iz, *cal'-is, *chal'-is, *cal'-ice, *chal'-ys, s. [Fr. & Ital. *calice*; Sp. *caliz*, from Lat. *calix* (genit. *calicis*); Gr. *kalyx*=a cup.]

*1. A cup or drinking vessel.

"Moyses took the half parti of the blood and putte it into *chalices*."—*Myclife: Exod.* xxiv. 6.

2. Specially applied to the "cup" used in the Holy Communion.

"Sprat, Bishop of Rochester, lately a member of the High Commission, had charge of the *chalice*."—*Macaulay: Hist. Eng.*, ch. xi.

chalice-flower, s.

Bot.: A plant, *Narcissus Pseudo-narcissus*.

chāl'-īced, a. [Eng. *chalic(e)*; *-ed*.] Having a cell or cup; formed in the shape of a cup.

"His steeds to water at those springs
On *chaliced* flowers that lies."

Shakesp.: Cymbeline, ii. 3.

chāl'-ī-cō'-mŷs, s. [From Gr. *chalix*, genit. *chalikos*=gravel, rubble, and *mŷs*=a mouse.]

Palæont.: A genus of rodents akin to the beavers, found in the Miocene and Pliocene beds.

chāl'-ī-cō-thēr'-ī-ūm, s. [From Gr. *chalix*, genit. *chalikos*=gravel, and *thērion*=a wild animal.]

Palæont.: A genus of ungulated mammals belonging either to the family Anoplotheridæ, in which case it is one of the Artiodactyla, or akin to the Tapiridæ and the Brontotheridæ, in which case it is one of the Perissodactyla. It occurs in Miocene beds in Europe, India, China, and North America. Some of the species are as large as a rhinoceros. (*Nicholson.*)

chāl'-ī-lite, s. [From Gr. *chalix*=gravel, and *lithos*=stone.]

Min.: A compact variety of Thomsonite of a reddish-brown color. It occurs at Ballimony, Antrim, Ireland.

chāl'-ī-mŷs, s. [Etymology doubtful.]

Zoöl.: A genus of Crustacea of the order Siphonostoma and family Caligidæ, having the fourth pair of legs slender, of only one branch, and serving for walking; frontal plate with a long and slender prehensile appendage arising from the middle of its anterior surface. *Chalimus scombri* is found upon the mackerel, and upon species of Caligus, of which it has been supposed to be the young; length, about 1-6". (*Griffith & Henfrey.*)

chāl'-ī-sē'-mā, s. [Gr. *chalix*=a pebble; *sōma*=a body.]

Ichthy.: A genus of fishes of the family Balistidæ, in which the caudal fin is large and doubly lunate, and the second dorsal and anal fins falcated. Order, Plectognathes.

qhālke, *calke, *calke (l silent), s. & a. [A. S. *cealc*; O. H. Ger. *calch*; Ger., Dan. & Sw. *kalk*, from Lat. *calx* (genit. *calcis*) = limestone; Ital. *calce*; Sp. *cal*; Wel. *calck*; Fr. *chaux*.]

A. As substantive:

1. **Ordinary Language**:

1. *Lit.*: In the same sense as II. 1. *Min. & Chem.* (q. v.)

2. **Figuratively**:

(1) A score, that being marked up in chalk on a slate, door, &c.

(2) A score or point gained in any game.

† *By a long chalk; by long chalks*: By many degrees, greatly, far, in allusion to the ancient custom of making the merit marks with chalk, before lead pencils were so common. (*Brewer.*)

"The Indus ranks foremost by a long chalk."—*De Quincey: Syst. of the Heavens*.

As big as a piece of chalk: Of very uncertain size. *To know chalk from cheese*: To have one's wits about one; to know a worthless thing from a valuable one.

"He knows chalk from cheese: he knows on which side his bread is buttered."—*Withal: Dictionary*, ed. 1634, p. 570.

Walk your chalks: [WALK.]

II. Technically:

1. **Min. & Chem.**: A massive, opaque carbonate of lime, of a white, grayish, or yellowish color, with an earthy fracture. Specific gravity, 1.8-2.8. Dana places it along with calcareous marl, under the heading soft, compact limestone, constituting his twenty-first variety of the mineral species Calcite.

2. Geology and Palæontology:

(1) **Spec.**: A rock which, when pure, as it often is, is made up of the constituents given under II. 1. *Min.* (q. v.) A great belt of it crosses England diagonally from the eastern to the southern coast, and it is impossible to approach London from the east, west, north, or south without having chalk rocks, at a distance often very limited, beneath one's feet. Their appearance is familiar, owing to their being conspicuously displayed in the chalk cliffs of Dover, and in various chalk pits in the southern counties, on the escarpments on the sides of the Northern and Southern Downs [Downs] and in railway cuttings. The chalk, properly so called, consists of the highest portion of the Upper Cretaceous System, and is divided into Upper White Chalk with Flints and Lower White Chalk without Flints. [FLINT, *Geol.*] The larger animal fossils of the White Chalk consist of Crinoids and other Echinoderms; Cephalopod Mollusks, specially Ammonites, Baculites, Belemnites; Brachiopods, such as Terebratulæ, &c.; of other Mollusks, Rudistidæ, &c.; of fish, teeth of Cestracionts; of reptiles, Pterodactyls, Turtles, and Oviparous Saurians. Of the smaller organisms, Globigerinæ, and other Foraminifers abound; in fact, chalk is mainly composed of these cemented together by a calcareous paste. The examination by Sir Leopold McClintock, Dr. Carpenter, Sir Wyville Thomson, Prof. Huxley, Dr. Wallich, and others, of the Atlantic ooze obtained in connection with the laying of the telegraphic cable to America, and in the subsequent exploratory expeditions of the Porcupine, Challenger, &c., have shown that the ooze now being deposited at a depth of from 5,000 to more than 15,000 feet in the Atlantic is essentially chalk, with Globigerinæ and other Foraminifers, the former apparently identical with existing species. Most other organisms are extinct, though a few are not. This discovery does not shorten by an hour the period which has elapsed since the chalk first began to be formed, but only proves that a process which was thought to have terminated or intermitted, still goes on. As chalk is a deep-sea formation the vegetable fossils of the Chalk rocks are unimportant.

(2) **Gen.**: The Cretaceous rocks in general, whatever their actual composition. [CRETACEOUS FORMATION OF SYSTEM.]

3. **Comm.**: When purified, chalk is called whiting and Spanish white. Pure chalk should dissolve readily in dilute muriatic acid, and the solution should afford no precipitate with water of ammonia. Chalk is burnt into lime in great quantities, in which state it is used as a manure, and for making mortar and whitewash.

"Chalk is of two sorts; the hard, dry, strong chalk, which is best for lime; and a soft unctuous chalk, which is best for lands."—*Mortimer*.

Black chalk: A carbonaceous variety of shale.

Brown chalk: A familiar name for umber.

French chalk (Min.): [SOAPSTONE.]

Red chalk: A clay deeply colored with the peroxide of iron, of which it generally contains 15-18 per cent.

4. **Art**: A drawing in chalks=one executed with chalk pencils of different colors.

B. As adjective:

1. Consisting in large measure of chalk, as a chalk down.

2. Derived from chalk or occurring in it, as a chalk flint.

3. Belonging to the time when the chalk was deposited, as the chalk formation.

† Obvious compounds: *Chalk-hill, chalk-mark, chalk-pit, chalk-quarry.*

chalk-bed, s. A layer of chalk.

chalk-cutter, s. A man who digs up chalk.

chalk-drawing, s. A drawing sketched and filled in with black or colored chalks.

chalk-line, s. A cord rubbed with chalk or similar material, used by artificers for laying down straight lines on the material as a guide for a cutting instrument.

Chalk-line reel: A spindle or vessel on which a chalk line is wound

chalk-marl, s.

Geol.: An argillaceous stratum situated just under the Lower White Chalk without flints. It contains thirty-two species of Ammonites, seven peculiar to it. There are also Scaphites, Turritiles, &c.

chalk-stone, s.

1. **Ord. Lang.**: A lump of chalk.

"He maketh all the stones of the altar as *chalk-stones* that are beaten asunder."—*Isaiah xxvii.* 9.

fāte, fāt, fāre, amidst, whāt, fāl, father; wē, wēt, hēre, camel, hēr, thēre; pīne, pīt, sīre, sīr, marine; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rūle, fūll; trŷ, Sŷrian. æ, œ = ē; ey = ā. qu = kw.

2. *Med.*: Gouty concretions in tissues and joints, especially of the feet and hands, consisting chiefly of sodium urate $C_5H_4N_2NaO_3$. They are composed of bundles of crystals of urate of soda, and often attain to a considerable size, causing much deformity. Chalk stones are the morbid products of the gouty diathesis which in this way seeks to eliminate itself.

"Also, in many gouty persons, but not in all . . . what are called *chalk-stones* form; concretions that look exactly like chalk collect around and outside the joint . . . and lying in general immediately below the skin."—*Watson: Lectures on the Principles and Practice of Physic*, lect. lxxxi.

chalk-white, *chalkwhit, *chalkwhyghth, a. As white as chalk.

"Ffayre schetus of sylk *chalkwhyghth* as the mylk."
Degrevant, 1489.

çhâlk (*l* silent), *v. t.* [CHALK, *s.*]

I. *Literally*:

1. To rub over with chalk.

"With new chalk'd bills and rusty arms."
Hudibras.

2. To manure or dress land with chalk.

"Land that is *chalked*, if it is not well dunged, will receive but little benefit from a second *chalking*."—*Mortimer*.

II. *Figuratively*:

1. To mark or point out; to describe (now only with *out*).

"When now the boy is ripen'd into man,
His careful sire *chalks* forth some wary plan."
Byron: *Hours of Idleness; Childish Recollections*.

2. To make white or pale.

"Let a bleak paleness *chalk* the door."—*Herbert*.

*3. To run up a score.

"I . . . shall prosecute you more constantly than a city vintner does a country parliament man that *chalk'd* it plentifully last winter session."—*T. Brown: Works*, i. 182.

A. & B. As pr. par. & particip. adj.: In senses corresponding to those of the verb.

C. As subst.: The act of rubbing, marking, or dressing with chalk. (See extract under CHALK, *v.*, I. 2.)

çhâlk'-îng (2) (*l* silent), *pr. par.* [CAULKING.]

çhâlk'-ÿ (*l* silent), *a.* [Eng. *chalk*; -y.]

1. Consisting of chalk; full of or white with chalk; white.

"The roar of the waves breaking on the *chalky* shore."
Wordsworth: *To Liberty*, x. 1.

2. Impregnated with chalk; containing chalk.

"*Chalky* Wey that rolls a milky wave."
Pope: *Windsor Forest*, 346.

çhâl'-lënge, *cal-enge, *çhal-enge, *çhal-aunge, *çhal-eng, s. [O. Fr. *chalonge, chalenge, calange*; Ital. *calogna*; O. Sp. *calonja*, from Lat. *calumniā*=a false accusation.] [CALUMNY.]

I. *Ordinary Language*:

*1. An accusation, a charge.

"Ellis thou muste make thy *chaleng* agens God."—*Pecock: Repressor*, pt. I, ch. iii, p. 152.

*2. A claim, a demand; a wrong or injustice.

"The uerthe is *challenge*,"—*Ayenbite*, p. 34.

3. An invitation, defiance, or provocation to a duel.

¶ The issuing of a challenge to a duel with deadly weapons, or the carrying of such a challenge to the party to whom it is addressed, is in the majority of our states a serious offense, and is punishable in divers ways—in some instances with disfranchisement. In some of the states a prerequisite to registration and voting is a subscription on the part of the voter to an anti-dueling oath, in which he engages that he has not sent, and will not send, a challenge, or in any manner aid, abet or be concerned in a duel.

4. An invitation or call to a controversy or contest of any kind.

5. The act of disputing the correctness of any statement.

"The proposition . . . is liable to strong grounds of *challenge*,"—*Scott: Monastery*, Note N.

6. The state of being in dispute.

"Bringing her title into *challenge*,"—*Scott: Monastery*, ch. xvi.

II. *Technically*:

1. *Hunting*: The cry of hounds on first finding the scent of their game.

2. *Elections*: An objection to a person as not being legally qualified to vote.

3. *Law*: An exception or objection taken by the prosecutor or defendant in a criminal cause against any person or persons acting as jurors in a cause.

¶ *Challenge to the array*: An exception or objection taken against the whole panel of jurors.

Challenge for cause: An exception or objection to a juror on certain grounds alleged for suspecting that he favors one side, as distinguished from a principal challenge, in which there is *prima facie* evidence that this is so.

Law: Exception to one or more of the jurors who have appeared individually. (*Wharton*.)

Peremptory challenge: The right allowed to prisoners in certain cases of taking exception or objection to a certain number of persons as jurors, without assigning any reason.

4. *Mil.*: The act of a sentry in demanding the countersign from any person approaching or attempting to pass his post.

challenge-blast, s. A blast of a trumpet in defiance or challenge to a duel.

"The valiant Knight of Triermain
Rung forth his *challenge-blast* again."

Scott: The Bridal of Triermain, iii. 10.

çhâl'-lënge, *calangen, *çhalangen, *cal-engen, *çhalengyn, *çhalange, *calenge, v. t. & i. [O. Fr. *chalenger, chalengier, calenger, chalongier, chalonger*; O. Sp. *calonjar*; Ital. *calognare*, from Lat. *calumniō*=to charge falsely, to accuse.]

A. *Transitive*:

I. *Ordinary Language*:

*1. To blame, to reprove, to find fault with, to accuse.

"*Chalengyn* or *vndyrtakyn*. *Reprehendo, deprehendo*."

To *calangy*, after hyre fader by ryghte the kynedom."
Robert of Gloucester, p. 451.

3. To invite or defy to a duel.

4. To invite or call to a controversy or contest of any kind.

"Their bugles *challenge* all that will,
In archery to prove their skill."

Scott: The Lady of the Lake, v. 22.

5. To dispute the accuracy of a statement or document.

*6. To call to the performance of a duty or promise.

"I will now *challenge* you of your promise, to give me certain rules as to the principles of blazonry,"—*Peacham: On Drawing*.

II. *Technically*:

1. *Law*: To object or take exception to any person or persons acting as jurors in a cause.

2. *Mil.*: To question or demand the countersign from any person approaching or attempting to pass a sentry.

"But, when they had passed both frigate and block-house without being *challenged*, their spirits rose . . ."
—*Macaulay: Hist. Eng.*, ch. xvi.

3. *Elections*: To call in question a person's legal right to vote when offering his ballot at the polls.

*B. *Intrans.*: To claim as due or as a right, to demand.

"Which of you, shall we say, doth love us most?

That we our largest bounty may extend
Where nature doth with merit *challenge*."

Shakesp.: King Lear, i. 1.

¶ For the distinction between *to challenge*, *to brave*, *to defy*, and *to dare*, see TO BRAVE. (*Crabb: Eng. Synon.*)

çhâl'-lënge-a-ble, a. [Eng. *challenge*; -able.]
Capable of being challenged.

çhâl'-lënged, pa. par. or a. [CHALLENGE, *v.*]

çhâl'-lëng-ër, *çhal-eng-ere, s. [Eng. *challenge*; -er.]

I. *Ordinary Language*:

*1. An accuser.

"He schal mak low the false *chalengere*,"—*Wycliffe: Psalm* xli. 4.

2. One who invites or defies to a duel.

"Why, 'tis a boisterous and cruel style,
A style for *challengers* . . ."

Shakesp.: As You Like It, iv. 3.

3. One who invites or defies to a contest or trial of strength of any kind.

"The impious *challenger* of Power divine."

Couper: Task, vi. 546.

*4. One who claims as a right or due.

"Edward the Third, he bids you then resign
Your crown and kingdom, indirectly held
From him the native and true *challenger*."

Shakesp.: King Henry V., ii. 4.

*5. One who claims superiority.

"Whose worth

Stood *challenger* on mount of all the age,
For her perfections." *Shakesp.: Hamlet*, iv. 2.

6. One who objects to or disputes the accuracy of any statement or document.

II. *Law*: He who takes exception or objects to any person or persons acting as jurors in his cause.

A. & B. As pr. par. & particip. adj.: In senses corresponding to those of the verb.

C. As subst.: The act of making use of a challenge; accusing, defying.

"Of *chidyng* and *chalangyng* was his chief lifode."
Langland: P. Plowman, 2,649.

çhâl'-lîs, s. [Comp. Fr. *chaly*=a stuff made of goat's hair.]

Fabrics: An elegant, twilled, fine woolen fabric, used for ladies' dresses. Challis was introduced about 1832. It was made on a principle similar to Norwich crape, but of much finer materials, thinner, and softer; it had no gloss, but was very pliable and clothly. The best quality was finished with designs and figures.

çhal'-ÿb'-ë-an, a. [Fr. *chalybe*; Lat. *chalybeus*=pertaining to steel, from *chalybs*; Gr. *chalyps*, genit. *chalybos*=steel.] Pertaining to steel; hence, highly tempered, of the finest quality.

"The hammered cuirass,

Chalybean tempered steel, and frock of mail."

Milton: Samson Agonistes, 133.

çhal'-ÿb'-ë-ate, a. & s. [Lat. *chalybeus*, from *chalybs*; Gr. *chalyps*=steel.]

A. As adj.: Impregnated with iron or steel; having the qualities of steel.

B. As subst.: Any liquid or medicine impregnated with iron or steel.

"The topical action of these *chalybeates* is very unequal,"—*Pereira: Materia Medica and Therapeutics*, p. 189.

¶ *Chalybeate spring*:

Med., &c.: A spring in which iron in some form or other is not merely to be found but predominates over the mineral constituents associated with it in the water. It generally occurs as a protoxide or protocarbonate, or sulphate of iron. An *acidulo-chalybeate spring* is one in which there is much free carbon dioxide. These springs are numerous in the eastern mountain regions of this country.

çhâl'-ÿ-bîte, s. [In Ger. *chalybit*. From Lat. *chalybs*; Gr. *chalyps*, genit. *chalybos*= . . . steel.]

Min.: The same as Siderite (*Dana*). [SIDERITE.]

çhâm'-a, s. [From Lat. *chama*=a gaping shell, a cockle; Gr. *chēmē*=(1) a yawning, a gaping, (2) the cockle, from its gaping bivalve shell.]

Zoöl. & Palæont.: A genus of mollusks, the typical one of the family Chamidae (q. v.). The shell has foliaceous valves, the upper one the smaller, one valve attached to another body by the left umbo; the hinge tooth of the free valve is received between two teeth of the other. The *chamas* are found in less

than 50 fathoms deep in tropical seas, especially among coral reefs. Fifty recent species are known, and forty fossil, the latter from the Greensand onward. The still existing *Chama gigas* sometimes weighs 300 lbs. The byssus by which it adheres to the rock is so tough that a hatchet is required to cut it through. One valve is sometimes used in churches as a baptismal font.

çhâm'-a'-çë-æ, s. pl. [From Lat. *chama* (q. v.), and fem. pl. adj. suff. -aceæ.]

Zoöl.: Cuvier's name for the family of Conchiferous mollusks, of which *Chama* is the typical genus. They are placed by Cuvier between the Mytilacæ, or Mussels, and the Cardiacæ, or Cockles. [CHAMIDÆ.]

çhâm'-a'-çë-ans, s. pl. [From Mod. Lat. *chamaceæ* (q. v.), and Eng. suff. -ans.]

Zoöl.: The English name for the mollusks of Cuvier's family Chamaceæ, now called Chamidæ. (See these words.)

çham'-ade, s. [Fr. & Port. *chamade*; Ital. *chiamata*, from Port. *chamar*; Ital. *chiamare*, from Lat. *clamo*=to call.]

Military: The beat of a drum or sound of a trumpet demanding a surrender or parley.

"Several French battalions made a show of resistance, but upon our preparing to fill up a little fosse, in order to attack them, they beat the *chamade*, and sent us *charte blanche*,"—*Addison*.

Shell of *Chama Macrophylla*.

chām-æ-bāt'-ī-ā, s. [From Gr. *chamai*=on the ground, in compos. dwarf; and *batos*=a bramble-bush.]

Bot.: A genus of plants, belonging to the Rose family, and consisting of a single species, *Chamæbatia foliolosa*, a beautiful Californian shrub, with flowers very much like those of the hawthorn. All the young parts of the plant are covered with small glands, which secrete a resinous fluid, having a pleasant balsamic odor.

chām-æ-çyp'-ar-is, s. [Lat. *chamæcyparissos*. From Gr. *chamaikyparissos*=a kind of spurge, *chamai*=on the ground; and *kyparissos*=a cypress.]

Bot.: A little group of Conifers, forming a section of the genus *Cupressus*.

chām-æ-dör'-ē-ā, s. [From Gr. *chamai*=on the ground, and *dōrea*=a gift, a present.]

Bot.: A genus of Palms, containing between thirty and forty species. All are natives of tropical America. The young unexpanded flower-spikes are used by the Mexicans as a vegetable, under the name of *Tepejilote*.

chām-æ-fis'-tu-lā, s. [Gr. *chamai*=on the ground, dwarf; and Lat. *fistula*=a pipe, from the cylindrical pods.]

Bot.: A genus of leguminous trees or shrubs, with yellow flowers, belonging to the family *Cassieæ*.

chām-æ-lāu-çī-ā'-çē-æ, s. pl. [From Gr. *chamai*=on the earth, on the ground often in compos. for low-growing, dwarf; and *lauchis*=a poplar (not in *Liddell & Scott*), and Lat. fem. pl. adj. suff. -*aceæ*.]

Bot.: A tribe of Myrtaceæ, sometimes considered as a separate family. They are distinguished by their heath-like habit and foliage. The species are numerous, all Australian, and distributed into fourteen or fifteen genera, of which the principal are *Calytrix*, *Lhotskya*, *Verticordia*, &c.

chā-mæ'-lēd-ōn, s. [From Gr. *chamai*=on the ground, in compos. dwarf; and *lēdon*=an oriental shrub, *Cistus creticus*.]

Bot.: An obsolete genus of plants, order *Ericaceæ*. *Chamæledon procumbens* is the name given by Link to a beautiful Alpine shrub, formerly referred to *Azalea*, but now referred by Hooker, after the example of the continental botanists, to *Loiseleuria*. It is a small evergreen creeping shrub, found on the mountains of Europe and North America. The leaves are leathery, shining, turned back at their edges, and about half-an-inch long. Flowers minute, growing in terminal umbels of a light flesh color. Calyx five-parted; corolla campanulate, five-cleft; anthers rounded and opening longitudinally.

chā-mæ'-lē-ō, s. [From Lat. *chamæleon*.] [CHAMELEON.]

1. **Zoöl.**: A genus of Lizards, the typical one of the family *Chamæleontidæ* (q. v.). *Chamæleo africanus* is the well-known Chameleon (q. v.). About 17 other species are known. The head is pyramidal, the eyes and mouth are large; they have a conspicuous neck, a thick body, looking almost hump-backed, five toes, which, however, are arranged in two groups, so as to present a certain resemblance to those of a Scansorial bird. [CHAMELEON.]

2. **Palæont.**: The genus seems to have come into existence in Eocene times.

chā-mæ'-lē-ōn'-tī-dæ, **chām-æ'-lē-ōn'-ī-dæ**, s. pl. [Eng. *chameleon*; t connective, and Lat. fem. pl. suff. -*idæ*.]

Zoöl.: A family of reptiles, order *Lacertilia* (Lizards). It contains only the typical genus *Chamæleo*.

chā-mæ'-mēl-ēs, s. [Gr. *chamai*=on the ground, and *mēlon*=an apple.]

Bot.: A genus of appleworts, deriving their name from their low growth. The genus was founded by Lindley to comprehend a dwarf shrub very like *Box*, a native of the sea-cliffs in Madeira, having simple shining evergreen, mostly entire leaves, and flowers growing in clusters, which are leafy at the base.

chām-æ-nē'-mā, s. [Gr. *chamai*=on the ground, and *nemos*=feeding.]

Bot.: A supposed genus of Leptotricheous Algæ, consisting of dusky-colored jointed filaments, forming flocks in various syrups. Doubtless the mycelia of some fungi, such as *Penicillium*. (*Griff. & Henfrey*.)

chām-æ-peū'-çē, s. [Gr. *chamat*=on the ground, and *peukē*=a fir.]

Bot.: A genus of plants belonging to the Composite, allied to the plume thistles, *Cirsium*, on the one hand, and to the true thistles, *Carduus*, on the other. Leaves generally lanceolate, smooth, but, as well as the stem, covered below with a white cottony substance. Flower-heads one to two inches in diameter, arranged in corymbs, or long leafy racemes; corollas purple or white. There are fifteen known species, all natives of the Mediterranean region.

chām-æ'-pīt-ys, s. [Gr. *chamaipitys*=ground-pine.]

Bot.: The herb Ground-pine, a plant of the genus *Cressa*.

chām-æ-rhō'-dos, s. [From Gr. *chamai*=on the ground, in compos. dwarf; and *rhodon*=a rose.]

Bot.: A genus of the Rose family. The species are perennial plants, seldom attaining more than one foot in height, and generally having decumbent stems furnished with alternate three or four-parted leaves, about half an inch long. Flowers small, white or purple. The species are found in Siberia, Northern China, and Thibet, and also in the Rocky Mountains.

chām-æ-rōps, s. [Gr. *chamairōps*=an unidentified plant mentioned by Pliny.]

1. **Bot.**: A genus of plants belonging to the order *Palmaceæ*. The Dwarf Fan-Palm, so called from its low growth. It is the most northerly of the Palm genera, and consists of ten or twelve species. *Chamærops humilis* extends as far north as Nice, and the leaves of it are used for making hats, brooms, and baskets, and for thatching purposes. *C. Fortuni*, a native of China, furnishes a coarse brown fiber used for hats and a waterproof cloth called *So-e*.

2. **Palæont.**: A Lower Miocene species (*Chamærops helvetica*) has been found in Switzerland.

chām-æ-sci-ād'-ī-ūm, s. [Gr. *chamai*=on the ground, and *skiadion*=a little shade; *skia*=a shade, a shadow.]

Bot.: An umbelliferous plant with a fusiform root and yellow petals, a native of Caucasus and Cappadocia. It is allied to the *Trinium*, or *Earth-nut*.

chām-æ-sphær'-ī-ōn, s. [Gr. *chamai*=on the ground, and *sphairion*=a little ball.]

Bot.: The name given to a pigmy plant of the composite order found in Western Australia. The whole plant is about the size of a pea, and consists of a globular dense cluster of white flower-heads surrounded by a rosette of narrow leaves a quarter of an inch in length.

chām-æ-ān-īsm, s. [SHAMANISM.]

chām-æ-ā-çite, s. [From St. Chamas, in the south of France (?), and Eng. &c., suff. -*ite* (Min.) (q. v.).] **Min.**: An alloy of iron with 23 per cent. of nickel, found in some meteorites.

I. Ordinary Language (chiefly of the form chamæleon):

1. Literally:

(1) The animal known to naturalists as *Chamæleo africanus*. Owing to the *rete mucosum* containing two kinds of coloring matter, the animal frequently changes color to the eye of the observer, a property which has rendered it an object of curiosity in all ages. It was anciently fabled to live on air. It has but five cervical vertebrae. The hind as well as fore toes are five; trunk mounted high on the legs, forming an exception to the majority of reptiles; lungs very large; tongue cylindrical, extensible, and retractile, terminating in a dilated and tubular tip covered with a glutinous secretion, by means of which the animal catches its food of insects, flies, &c. Reproduction by means of eggs.

"As the chamæleon, which is known
To have no colors of his own."—Prior.

(2) Any other species of the same family.

2. Fig.: A politician or other public man who shows great facility in changing or pretending to change his sentiments, thus suiting his "color" to his place.

1. **Zoöl.**: An antelope, *Rupicapra tragus*, formerly called *Antilope Rupicapra*. It is the only antelope found wild in Europe, and in physical character it is somewhat aberrant, approaching the sheep and goats. It is about three feet three inches high, with two parallel horns six or seven inches long, and no beard. It is densely clothed with hair. It is found on high mountain ranges, specially on the Alps, the Pyrenees, the Carpathian mountains, and those of Greece, besides which it is believed to exist also on those of the Taurus and of the Caucasus.

"These are the beasts which ye shall eat; the ox, the sheep, . . . the wild ox, and the chamois."—Deut. xiv. 4, 5.

2. **Comm. (Shammy, Chamois-leather)**: The name indicates that this leather is made from the skin of the Chamois (*Rupicapra tragus*), but the skins of sheep, goats, deer, calves, and the split hides of other animals, are used for making this kind of leather; the superior kinds of which are called *chamois*, and the inferior, *wash-leather*. The skins are unhaired in a lime-vat, and scraped on a beam in the ordinary way. The lime is removed in a bath by lactic or acetic acid, and the skins are then frizzed. This process consists in rubbing the skins with pumice or the blunt end of a round knife, until the grain is removed, the skin softened, and reduced to an even thickness throughout. The skins are then pressed to expel water, felled by wooden hammers, spread, treated with oil—fish-oil

being preferable—rolled up and again felled, to distribute the oil throughout the bundle. They are then taken out, unfolded, dried, re-oiled, and again rolled and felled. These processes are repeated till the effect is fully accomplished, heat being applied during the latter portion, by means of suspending the skins in a store-room. Superfluous oil is removed by a short steeping in a dilute alkaline lye; the skins are then wrung, dried, supplied by stretching, and polished by rolling.

chamois-leather, s. [CHAMOIS, 2.]

chām'-ois-ite (oi as wā), s. [From Chamoison, where it occurs; and Eng. suff. *-ite* (Min.) (q. v.).]

and semi-sparkling. They are either sweet or dry, according to the extent to which fermentation has been carried. In the manufacture of Champagne black grapes of the first quality are usually employed. The breakage of the bottles in these sparkling wines amounts frequently to thirty per cent. Much of the Champagne sold is spurious, being manufactured from a cheap white wine sweetened with sugar, and colored. Sometimes it consists entirely of wine made from gooseberries or rhubarb sweetened, and charged with carbonic-acid gas. As in all other products of the grape, California has taken a pre-eminent position, so in regard to the manufacture of effervescent wines, the California article being pronounced by unprejudiced judges fully equal to the best French product.

A. As substantive:

I. Ordinary Language:

*1. A fighter, a warrior, a boxer.

"Champion or campyon. Campio, athleta, pugil."—*Prompt. Parv.*

"A champion is in the place
That hath iwrought me sorwe,"

Gamelyn, 203.

2. One who engages in a duel or battle on behalf of another.

"Tis therefore sober and good men are sad
For England's glory, seeing it wax pale
And sickly, while her champions wear their hearts
So loose to private duty, that no brain
Can dream them trusty." *Cowper: Task*, v. 511.

"What checks the fiery soul of James?
Why sits that champion of the dames
Inactive on his steed?"

Scott: Marmion, vi. 20.

3. A stout-hearted warrior; a noble knight.

"The meeting of these champions proud
Seemed like the bursting thunder-cloud."

Scott: The Lay of the Last Minstrel, iii. 5.

4. One who is the acknowledged superior in any exercise.

5. A strong supporter or defender of anything.

***II. Old English Law:** One who maintained a cause by wager of battle. When a tenant in a writ of right plead the general issue, i. e., that he had more right to hold than the demandant to recover, and offered to prove it by the body of his champion, the demandant had the option of refusing or accepting the proposal. If he did the latter, then the tenant's champion being produced threw down his gage or glove, which his opponent's champion took up. A piece of ground, sixty feet square, was then inclosed with lists. Within it the champions, if brave enough, fought till the stars appeared; and if the champion of the tenant held his own till that time, he gained the victory for his employer or friend, while if vanquished, the land for which he contended was lost. Sometimes the fight was terminated prematurely by one of the champions proving "recreant," and pronouncing what Blackstone calls "the horrible word 'craven.'" The man who did so was believed to be permanently disgraced, and was never in future put on a jury, or even allowed to appear as a witness in a court of law.

"In our common law, *champion* is taken no less for him that trieth the combat in his own case, than for him that fighteth in the case of another."—*Cowel*.

B. As adj.: Holding the place or position of a champion; the acknowledged superior in anything.

"The emperor's wish to check the tyranny of the prefects and tax-gatherers was strongly marked in the case of the *champion* fighting-cock."—*Sharpe: History of Egypt*, ch. xi.

¶ *Champion of the King, or Queen, or of the Realm:* An ancient officer who, at the coronation of English kings, while the king was at dinner, rode armed *cap-à-pié* into Westminster Hall, and with a proclamation made by a herald threw down his gauntlet and challenged any who disputed the king's right to the throne to single combat. His fee was a gilt cup, with a cover, filled with wine. The ceremony has been discontinued.

¶ For the difference between *champion* and *combatant* see *COMBATANT*.

chām'-pī-ōn, v. t. [CHAMPION, s.]

chance, ***cheance**, ***cheaunce**, ***chaunce**, ***chans**, ***chaunse**, s., a. & adv. [O. Fr. *cheance*, from *cheoir*=to fall; Ital. *cadenza*, from Low Lat. *cadentia*=a chance, from *cado*=to fall.]

A. As substantive:

1. An accident, a casual occurrence or event.

"... it was a chance that happened to us."—*1 Sam.* vi. 9.

"To say a thing is a chance or casualty, as it relates to second causes, is not profaneness, but a great truth..."—*South.*

2. Fortune; the cause or origin of fortuitous events.

"May hope, when everlasting Fate shall yield
To fickle Chance, and Chaos judge the strife."

Milton: P. L., ii.

3. The act of fortune, the course of events.

"... the art of catching the tone of any society into which chance might throw him."—*Macaulay: Hist. Eng.*, ch. xii.

4. The quality of being without any defined or recognized cause; fortuity.

"Chance is but a mere name, and really nothing in itself; a conception of our minds, and only a compendious way of speaking, whereby we would express, that such effects as are commonly attributed to chance, were verily produced by their true and proper causes, but without their design to produce them."—*Bentley*.

5. The event, success, or result of things.

"Turne we our steeds; that both in equal tilt
May meete againe, and each take happy chaunce."

Spenser: F. Q., III. viii. 18.

6. An unlucky event; misfortune, ill-luck.

"You were us'd
To say extremity was the trier of spirits,
That common chances common men could bear."

Shakesp.: Coriolanus, iv. 1.

7. The possibility or probability of any occurrence.

"Thus he taught the game of hazard,
Thus displayed it and explained it,
Running through its various chances."

Longfellow: The Song of Hiawatha, xvi.

8. An opportunity offered.

¶ *The last chance:* The last remaining hope.

The main chance: The principal or most important opportunity offered to one.

To take care of or mind the main chance: To watch one's best opportunity to look after one's self, or one's own interests, before those of others.

¶ (1) After pointing out the heathenish character of the three words *chance*, *fortune*, and *fate*, Crabb thus distinguishes between them: "In this ordinary sense *chance* is the generic, *fortune* and *fate* are specific terms; *chance* applies to all things personal or otherwise; *fortune* and *fate* are mostly said of that which is personal. *Chance* neither forms orders or designs; neither knowledge or intention is attributed to it; its events are uncertain and variable; *fortune* forms plans and designs, but without choice; we attribute to it an intention without discernment; it is said to be blind; *fate*

forms plans and chains of causes; intention, knowledge, and power are attributed to it; its views are fixed, its results decisive. A person goes as *chance* directs him when he has no express object to determine his choice one way or other; his *fortune* favors him, if without any expectation he gets the thing he wishes; his *fate* wills it, if he reaches the desired point contrary to what he intended. Men's success in their undertakings depends oftener on *chance* than on the ability; we are ever ready to ascribe to ourselves what we owe to our good *fortune*; it is the *fate* of some men to fail in every thing they undertake."

(2) *Chance* and *probability* are thus discriminated: "These terms are both employed in forming an estimate of future events; but the *chance* is either for or against; the *probability* is always for a thing; a *chance* is but a degree of probability."

(3) The following are stated to be the differences between *chance* and *hazard*: "Both these terms are employed to mark the course of future events, which is not discernible by the human eye. With the Deity there is neither *chance* nor *hazard*; His plans are the result of omniscience, but the designs and actions of men are all dependant on *chance* or *hazard*. *Chance* may be favorable or unfavorable, more commonly the former; *hazard* is always unfavorable; it is properly a species of *chance*. There is a *chance* either of gaining or losing: there is a *hazard* of losing."

(4) The following are the differences between *accident* and *chance*: "... *Accident* and *chance* may be used indifferently in the colloquial expression to happen by chance or by accident; but the word *accident* is used only in respect to particular events, as it was pure *accident*; but *chance* is employed to denote a hidden senseless cause of things as opposed to a positive intelligent cause." (*Crabb: Eng. Synon.*)

B. As adj.: Happening accidentally; casual, accidental, fortuitous.

"Now should they part, malicious tongues would say,
They met like chance companions on the way."

Dryden.

***C. As adv.:** Perchance, accidentally, fortuitously, unexpectedly.

"If chance by lowly contemplation led,
Some kindred spirit shall inquire thy fate."

Gray: Elegy.

¶ Compounds of obvious meaning: *Chance-comer*, *chance-gift*, *chance-hit*, *chance-met*, *chance-poised*, *chance-sown*.

chance-medley, ***chaud-medley**, s. & a.

A. As substantive:

1. *Ord. Lang.:* Chance, luck, a haphazard result.

"Wherefore they are no twain, but one flesh; this is true in the general right of marriage, but not in the *chance-medley* of every particular match."—*Milton: Te-trachordon*.

2. *Law:* The casual slaughter of a man, not altogether without the fault of the slayer, when ignorance or negligence is joined with the chance; as if a man lop trees by a highway-side, by which many usually travel, and cast down a bough, not giving warning to take heed thereof, by which bough one passing by is slain: in this case he offends, because he gave no warning, that the party might have taken heed to himself.

"But the self-defense, which we are now speaking of, is that whereby a man may protect himself from an assault, or the like, in the course of a sudden brawl or quarrel, by killing him who assaults him. And this is what the law expresses by the word *chance-medley*, or (as some rather choose to write it), *chaud-medley*, the former of which in its etymology signifies a casual affray, the latter an affray in the heat of blood or passion; both of them of pretty much the same import."—*Blackstone: Commentaries*, b. iv., c. 14.

B. As adj.: Depending on chance or fortune.

"And, artless as thou art, whom thou wilt choose;
Though much depends on what thy choice shall be,
Is all *chance-medley*, and unknown to me."

Cowper: Tirocinium.

chance, ***chaunce**, ***chaunse**, v. i. & t. [CHANCE, s.]

A. Intransitive:

1. *Of things:* To happen, to fall out, to befall, to occur accidentally.

"... natural selection can do nothing until favorable variation *chance* to occur."—*Darwin: Origin of Species* (ed. 1859), ch. vi., p. 177.

(2) To meet or fall in with; to find or hit upon (followed by a preposition).

"He *chanced* upon divers of the Turks' victuallers, whom he easily took."—*Knolles: History of the Turks*.

B. Transitive:

*1. To befall, to happen to.

"It hath not *chaunced* me to see it."—*Lambarde*.

2. To risk, to venture upon (*colloquial*).

¶ To *chance on*: To fall in with, to happen on.

"By what strange accident, I *chanced* on this letter."—*Shakesp.: Merchant of Venice*, v. 1.

How *chance*: How chances it, how comes it.

"How *chance* you went not?"—*Shakesp.: Merry Wives*, v. 5.

chan'-çel-lôr, **chaun-çel-er*, **chaun-sel-er*, **chaun-sel-ere*, *s.* [In A. S. *cancelere* (Bosworth); Icel. *kanzellari*; Sw. *kansler*; Dan. *cantsler*; Dut. *kanselier*; Ger. *kanzler*; Fr. *chancelier*; O. Fr. *chancelier*, *cancelier*; Sp. *canciller*, *cancellario*; Port. *chancellor*, *cancellario*; Ital. *cancelliere*. From Low Lat. *cancellarius*=originally an officer having charge of records which stood near the lattice-work, or bar, which fenced off the seat of the judge or judges from the rest of the court. Class. Lat. *cancelli*=an inclosure of wood, a railing, lattice, &c.; pl. of *cancellus*=a grating; dimin. of *cancer*=a crab.

I. In ancient times: Originally (in the Roman Empire): A petty officer stationed at the fence of bars or lattice-work in a law-court, to introduce such functionaries as were entitled to pass inside. The Emperor Carinus, the immediate predecessor of Diocletian, gave great offense by making such a cancellarius prefect in Rome. When the eastern empire was founded the office with its powers greatly augmented was continued.

II. In modern times:

1. From the Romans, the title and office passed to the church, and therefore every bishop of the Catholic church has, to this day, his chancellor, the principal judge of his consistory. When the modern kingdoms of Europe were established upon the ruins of the empire, almost every state preserved its chancellor, with different jurisdictions and dignities, according to their different constitutions. In all he seems to have had a supervision of all charters, letters, and such other public instruments of the crown, as were authenticated in the most solemn manner; and when seals came into use, he had the custody of the public seal. An officer bearing this title is to be found in most countries of Europe, and is generally invested with extensive authority. The title and office of chancellor came to us from England. Many of our state constitutions provide for the appointment of this officer, who is by them, and by the laws of the several states, invested with power as they provide. His principal duty is to preside over a court of chancery.—*Bouvier*.

2. The Lord Chancellor of England: Originally he was the king's chief secretary, to whom petitions were referred, whence he was called *referendarius*.

This title subsequently gave place to chancellor, which first occurs, according to Selden, in English history about A. D. 920. Being generally an ecclesiastic, he became keeper of the king's conscience. Having to express the sovereign's views in cases appealed to him from the Courts of Law, he gradually acquired a great legal standing himself, and finally developed into the potent personage now denominated the Lord Chancellor, or more fully the Lord High Chancellor. He is now the highest judicial functionary in the kingdom; he is keeper of the great seal; he presides in the House of Lords, of which he is prolocutor; he is a cabinet minister and privy councillor; presides in what was the Court or Chancery (once spelled *chancelery*), but is now the Chancery Division of the Supreme Court; appoints all justices of the peace throughout the kingdom; is the general guardian of all infants, idiots, and lunatics; visitor of the hospitals and colleges of royal foundation; and patron of all livings under twenty marks in value. He goes out with the ministry of which he is a member.

3. *Chancellor of the Exchequer of England*: Properly, the under-treasurer of the Exchequer, the head treasurer being held, not by an individual, but by the Lords Commissioners of the Treasury. The Chancellor has, however, a very powerful voice in connection with the Exchequer. He must be in the House of Commons, and may be its leader, and also Prime Minister.

4. *In Universities*: The titular head of a university. His office is only honorary. Under him is a Vice-Chancellor, who is the actual working head.

5. *The Chancellor of the German Empire*: Is an officer, the extent of whose power and influence has never been (to outside understanding, at least) exactly defined. In modern Germany since the unification of the German Empire the office has been made illustrious by its association with the name of Bismarck, the first to hold that position under the new regime. In general terms it may be stated that the German Chancellor is an executive officer of very great powers, being at once the adviser and prime minister of the Emperor. He combines the functions of one of our department secretaries with those of the promoter and originator of political policy.

chan'-çel-lôr-ship, *s.* [Eng. *chancellor*; -*ship*.] The office or position of chancellor.

**chăn'-çel-lôr-ỹ*, *s.* [Eng. *chancellor*; -*ỹ*.] The office of a chancellor. (*The Life of Becket*, 452.) (*Herbert Coleridge*.)

chan'-çer-y, **chăn'-çer-ie*, **chan'-çer-ye*, **chăn'-çel-ër-ie*, **chaun-çel-ler-ie*, *s. & a.* [O. Fr. *chancellerie*, *chancelrie*=a chancery court, the chancery, seale office, or court of every parliament" (*Cotgrave*); from Low Lat. *cancellaria*=a place where records are kept, a record-office of a chancellor, from *cancellarius*=a chancellor.]

A. As substantive:

1. The English Court of Chancery was the highest court of judicature next to the House of Lords. The Lord Chancellor presided in this court, having under him the Lords Justices and Vice-Chancellors, who act for him in separate courts, and the Master of the Rolls, who had the keeping of all the rolls and records of the Court of Chancery, and also presided in a court of his own. The Court of Chancery was a court of equity. Under the Judicature Act of 1873 the powers and jurisdiction of the Court of Chancery were transferred to the High Court of Justice, and it now exists as the chancery division of that court.

" . . . one of the ablest and most incorrupt judges that ever sat in *chancery*."—*Burnet: Own Time*, an. 1698.

2. In the United States, a court having equity jurisdiction. American courts of equity are, in some instances, distinct from those of law; in others, the same tribunals exercise the jurisdiction both of courts of law and equity, though their forms of proceeding are different in their two capacities. The Supreme Court of the United States, and the Circuit Courts, are invested with general equity powers, and act either as courts of law or equity.

B. As Adj.: (See the compounds.)

¶ Obvious compounds: *Chancery-court*; *chancery-suit*.

chancery-bar, *s.* The lawyers practicing in the Court of Chancery.

" . . . his urbanity, which won the hearts of the youngest lawyers of the *Chancery Bar*, . . ."—*Macaulay: Hist. Eng.*, ch. xxv.

C. As subst.: The act of happening casually or fortuitously.

chăn'-cre (*cre* as *kēr*), *s.* [Fr.] [CANKER, CANKER.]

Med.: An ulcer, usually arising from a venereal sore connected with syphilis. There are three species recognized among physicians: (1) the *hard*, or true Huntenan, (syphilitic) chancre; (2) the *soft*, or chancreoid (*q. v.*), a purely local affection; and (3) the *mixed* chancre, or one in which the characteristics are doubtful, and do not positively indicate whether it is the result of true syphilis or of syphilitoid.

chăn'-crôid, *s.* A term used by some medical writers on venereal diseases (notably Bumstead) to specify or describe a venereal ulcer which confines its effects entirely to the part affected, and is not followed by constitutional infection. It is supposed to be the manifestation of a mild form of syphilis, in which the poison is too attenuated to reproduce itself throughout the entire system.

chăn'-croûs, *a.* [Fr. *chancreux*, from *chancre*.] Having the qualities, or being of the nature of a chancre; ulcerous; having chancres.

chan'-çỹ, *a.* [Eng. *chanc(e)*; -*ỹ*.] (*Scotch*.)

chānge, ***changen**, ***chaungen**, ***chonge**, ***chaungy**, ***chawnge**, *v. t. & i.* [O. Fr. *changier*, *changer*; Fr. *changer*; Sp. & Port. *cambiar*; Ital. *cambiare*, from Lat. *cambio*=to exchange, to barter.]

A. Transitive:

1. To put, place, take, or substitute one thing instead of another; to exchange.

"And gan to chaunge her wede."

Amis and Amiloun, 1433.

"He that cannot look into his own estate, hath need choose well whom he employeth, and change them often."—*Bacon: Essays*.

¶ Generally with *for* before the thing taken in exchange.

"Y wolde chaunge myn for his."

Wright: Lyric Poems, p. 39.

2. To cause to pass from one state to another.

"He chaungid the watur into wyne."

Songs and Carols, p. 54.

3. Followed by *for*: To quit one state for another, to exchange one state for another.

"Persons grown up in the belief of any religion, cannot change that for another, without applying their understanding duly to consider and compare both."—*South*.

4. Followed by *with*: To give and take reciprocally; make an exchange with.

"To secure thy content, look upon those thousands, with whom thou wouldst not, for any interest, change thy fortune and condition."—*Taylor: Rule of Living Holy*.

5. To alter, make a thing different to what it was.

"I wylle never the more chaunge my mood."

Coventry Myst., p. 37.

"Suddenly changing their tone, they began to boast and to bluster."

Lonfellow: The Courtship of Miles Standish, vii.

6. To alter the nature, will, or disposition of.

"I would she were in heaven, so she could

Intreat some power to change this curish Jew."

Shakesp.: Merchant of Venice, iv. 1.

7. To give a different denomination or kind of money for.

"A shopkeeper might be able to change a guinea, or a moidore, when a customer comes for a crown's worth of goods."—*Swift*.

8. To substitute one garment or dress for another.

¶ *To change about*:

1. To change sides.

2. To be changeable or fickle.

To change a horse, or to change hand: To turn or bear the horse's head from one hand to the other, from the left to the right, or from the right to the left. (*Farrier's Dictionary*.)

To change arms:

Mil.: To shift the rifle from one shoulder to the other.

To change color: To grow pale, or blush; to betray by a change in the countenance a consciousness of guilt or demerit; to feel ashamed.

To change foot, or step:

1. Literally:

Mil.: To alter the position of the feet in marching.

*2. *Fig.*: To change sides on a question.

To change hands: To become the property of another.

To change one's tune: To alter one's manner of speech, or habit of life; to lower one's pretensions.

To change owners: The same as *to change hands*.

To change round: To alter; to change sides.

To change sides: To forsake one's party, or side, and join another.

To change the mizzen:

Naut.: To bring the mizzen-yard over the other side of the mast.

B. Intransitive:

1. To be altered; to undergo change.

"Ha chaungeth fram water into blod."

Florice and Blanch., 305.

2. To become altered in appearance.

"Tho chaungen gan here colour in here face."

Chaucer: C. T., 1639.

3. To pass from one state or phase to another.

"I am weary of this moon; would he would change."

Shakesp.: Mid. Night's Dream, v. 1.

"... when in a nascent or changing state."—*Todd and Bowman: Physiol. Anat.*, vol. i., ch. ii., p. 61.

4. To take or substitute one garment for another.

5. To turn sour or acid, to become tainted.

¶ (1) Crabb thus distinguishes between *to change*, *to alter* and *to vary*: "We change a thing by putting another in its place; we alter a thing by making it different from what it was before; we vary it by altering it in different manners and at different times. We change our clothes whenever we put on others; the tailor alters the clothes which are found not to fit, and he varies the fashion of making them whenever he makes new. A thing is changed

without altering its kind; it is altered without destroying its identity, and it is varied without destroying the similarity."

(2) He thus discriminates between *to change*, *to exchange*, *to barter*, and *to substitute*: "The idea of putting one thing in the place of another is common to all these terms, which varies in the manner and the object. Change is the generic, the rest are specific terms: whatever is exchanged, bartered, or substituted, is changed; but not vice versa. Change is applied in general to things of the same kind, or of different kinds; exchange to articles of property or possession; barter to all articles of merchandise; substitute to all matters of service and office. Things rather than persons are the proper objects for changing and exchanging, although whatever one has a control over may be changed or exchanged; a king may change his ministers; governments exchange prisoners of war. Things only are the proper objects for barter; but, to the shame of humanity, there are to be found people who will barter their countrymen, and even their relatives, for a paltry trinket. Substituting may either have persons or things for an object; one man may be substituted for another, or one word substituted for another. The act of changing or substituting requires but one person for an agent; that of exchanging and bartering requires two: a person changes his things or substitutes one for another; but one person exchanges or barters with another. Change is used likewise intransitively, the others always transitively; things change of themselves, but persons always exchange, barter, or substitute things. . . . In the figurative application these terms bear the same analogy to each other. A person changes his opinions; but a proneness to such changes evinces a want of firmness in the character. The good king at his death exchanges a temporal for an eternal crown. The mercenary trader barters his conscience for paltry pelf. Men of dogmatical tempers substitute assertion for proof, and abuse for argument." (*Crabb: Eng. Synon.*)

chānge, *s. & a.* [CHANGE, *v.*]

A. As substantive:

I. Ordinary Language:

1. Literally:

(1) The act of altering or changing; a substitution of one thing for another.

"Nothing can cure this part of ill-breeding, but change and variety of company, and that of persons above us."—*Locke*.

(2) The act of passing from one state or phase to another; alteration, mutation, vicissitude.

"Hear how Timotheus' various lays surprise,
And bid alternate passions fall and rise;
While at each change, the son of Lybian Jove
Now burns with glory, and then melts with love."

Pope: Essay on Criticism, 376.

(3) The state or quality of being altered.

"Since I saw you last,

There is a change upon you."

Shakesp.: Antony and Cleopatra, ii. 6.

(4) That which is substituted for another.

"He took with him . . . ten changes of raiment."—*2 Kings* v. 5.

(5) An alteration in the order or succession of a series. [II. 3, 4.]

(6) The act or process of giving and receiving things in exchange.

(7) That which is given in exchange for anything of a higher or lower denomination. (A shortened form of *exchange*, *q. v.*)

"Wood buys up our old halfpence, and from thence the present want of change arises; . . ."—*Swift*.

(8) The balance of money paid beyond the price of goods purchased, and therefore returned to the purchaser.

(9) A succession of events.

"O wond'rous changes of a fatal scene,

Still varying to the last!"

Dryden.

*2. Figuratively:

(1) Death; the moment of exchanging life for death, spoken of as "the great change."

(2) Novelty, variety.

"Perhaps you would like a kidney instead of a devil? It will be a little change."—*Disraeli: Henrietta Temple*, bk. vi., ch. xx.

II. Technically:

1. *Comm.*: A place where merchants and others meet to transact business. (Properly a curtailed form of *exchange*, *q. v.*)

"He found that he could not go on Change without being followed round the piazza by goldsmiths, . . ."—*Macaulay: Hist. Eng.*, ch. xx.

2. *Hunting*: Applied to a stag, whose scent has been crossed by chance by hounds in pursuit of another, and who is pursued in his turn.

3. Music:

(1) The word used as the short for change of key or modulation. Changes are of three kinds: the Diatonic, the Chromatic, and the Enharmonic changes.

(2) An alteration or permutation in the order in which a set of bells is rung; alternate or varied peals rung on bells.

"Four bells admit twenty-four changes in ringing, and five bells one hundred and twenty."—*Holder: Elements of Speech*.

4. *Math.*: The permutations, alterations, or variations which any number of things may undergo, or are capable of in respect of position, order, &c.

5. *Astron.*: The phases through which the moon passes.

"Take seeds or roots, and set some of them immediately after the change, and others of the same kind immediately after the full."—*Bacon: Nat. Hist.*

6. An inn or ale-house. [CHANGE-HOUSE.]

¶ *Change of voice*:

Music: [LARYNX.] (*Stainer & Barrett*.)

7. *Physiol.*: The menopause—which generally takes place in women from the age of 40 to that of 50—usually spoken of as the "change of life."

¶ *To ring the changes*:

1. *Lit.*: To ring a set of bells in varied peals. [II. 3.]

*2. *Figuratively*:

(1) To play upon words by slight changes in order or meaning.

"Easy it may be to contrive new postures, and ring other changes upon the same bells."—*Norris*.

¶ Crabb thus distinguishes between *change*, *variation*, and *vicissitude*: "Change consists simply in ceasing to be the same; variation consists in being different at different times; vicissitude in being alternately different and the same. All created things are liable to change; old things pass away, all things become new; the humors of men, like the elements, are exposed to perpetual variations; human affairs, like the seasons, are subject to frequent vicissitudes." (*Crabb: Eng. Synon.*)

B. As adj.: (See the compounds.)

change-house, *s.* An inn, an ale-house.

"When the Lowlanders want to drink a cheerupping cup, they go to the public house called the change-house, . . ."—*Smollett: H. Clinker*.

change-keeper, *s.* One who keeps an ale-house, or a petty inn.

"That nobody went into the house but the three brothers,—and Nelson the change-keeper and the deponent himself."—*Trials of Sons of Rob Roy*, p. 130.

change-pump, *s.* A pump introduced by the successors of Boulton and Watt in connection with the boilers of sea-going vessels, in order to keep a continual change in the body of water, removing the super-salted water and substituting sea water. The change-pump has been superseded by the blow-off cock, which, being turned at intervals, allows a portion of the super-salted water to escape overboard. External condensation and fresh-water boiler-supply are now the mode.

change-wheel, *s.*

Mach.: Change-wheels, having varying numbers of cogs at the same pitch, are used to connect the main arbor of the lathe with the feed-screw, so as to vary the relative rates of rotation and consequently the pitch of the screw to be cut. The first application of change-wheels to a lathe is supposed to have been in a fusee-cutting lathe, described in a work, 1741. The change-wheels are intermediate, and journaled in a bracket, which permits them to be brought into engagement with the rotative and feed wheels respectively. [SCREW-CUTTING LATHE, ENGINE-LATHE.] (*Knight*.)

chānge-a-bīl'ī-tŷ, ***chaunge-a-ble-te**, *s.* [Eng. *changeable*; -ity.] The quality of being changeable or subject to change; changeableness.

"Repenting whanne it berith chaungeablete, may not be in God."—*Wycliffe: 1 Kings* xv. 11.

chānge'-a-ble, ***chaunge'-a-ble**, *a.* [Eng. *change*; -able.]

1. Capable of being changed.

"The changeable suits of apparel, and the mantles, and the wimples, and the crisping-pins, . . ."—*Isa.* iii. 22.

2. Liable to change, fickle, inconstant.

"This worldis life that chaungeable es."

Hampole, 1,473.

*3. Having the quality of exhibiting different appearances.

"Now the taylor make thy doublet of changeable taffata; for thy mind is a very opal."—*Shakesp.: Twelfth Night*, ii. 4.

¶ Crabb thus distinguishes between *changeable*, *mutable*, *variable*, *inconstant*, *fickle*, and *versatile*: "Changeable is said of persons or things; mutable is said of things only: human beings are changeable, human affairs are mutable. Changeable respects the sentiments and opinions of the mind; variable, the state of the feelings; inconstant, the affections; fickle, the inclinations and attachments; versatile, the application of the talents. A changeable person rejects what he has once embraced in order to take up something new; a variable person likes and

"Then shall my hand, as *change*less as my mind,
From your glad eyes a kindly welcome find."

Buckinghamshire: *A Letter from Sea*.

*chānge'-līng, *chaung'-līng*, s. & a. [Eng. *change*, and dimin. suff. -ling.]

A. As substantive:

I. Literally:

1. Gen.: Anything substituted for another.

"I folded the writ up in the form of the other,
Subscrib'd it, gave the impression, plac'd it safely,
The *changeling* never known."

Shakesp.: *Hamlet*, v. 2.

2. Spec.: A child substituted, or left in exchange, for another.

"And her base elfin breed there for thee left:
Such men do *changelings* call, so chang'd by fairies'
theft."

Spenser: *Fairy Queen*.

II. Figuratively:

1. The fairies being popularly supposed to steal beautiful children, and leave in their places ugly and stupid ones, the word soon passed into the meaning of a fool, an idiot, or simpleton.

2. One who wavers or frequently changes his purpose; a waverer or fickle person.

*B. As Adjective:

1. Changed, substituted.

"I do but beg a little *changeling* boy."

Shakesp.: *Mid. N. Dream*, ii. 2.

2. Fickle, wavering, changeable, and inconstant of purpose.

"Nay, some are so studiously *changeling*. . . they esteem an opinion as a diurnal, after a day or two scarce worth the keeping."—Boyle: *Works*, vol. i., p. 35.

*†chāng'-ēr, *chaung'-er*, s. [Eng. *chang*(e); -er.]

1. Generally:

(1) One who changes or alters anything.

"Changer of all things, yet immutable,
Before and after all, the first and last."

Giles Fletcher: *Christ's Triumph*, ii. 40.

(2) One who is given to change; a fickle, inconstant person.

"Meddle not with them that are given to change [in the margin, *changers*]."—Proverbs xxiv. 21.

2. Spec.: One whose business is to change or discount money; a money-changer.

"He turnede upsidoun the boordis of *chaungeris*."—Wycliffe: *St. Matthew*, xxi. 12.

chāng'-īng, pr. par., a. & s. [CHANGE, v.]

A. & B. As pr. par. & particip. adj.: In senses corresponding to those of the verb.

C. As substantive:

1. The act or process of substituting or giving one thing in exchange for another.

"Now this was the manner in former time in Israel concerning redeeming and concerning *changing*, for to confirm all things, . . ."—Ruth iv. 7.

2. The act of passing from one state to another; alteration, change.

changing notes, s. pl.

Music: Passing notes or discords which occur on the accented parts of a bar. (Stainer & Barrett.)

**changing-piece*, s. One who is fickle or changeable.

"Go give that *changing-piece*."

Shakesp.: *Tit. Andron.*, i. 2.

**chank*, s. [CHANCRE.] (Nares.)

"An angel-like water of a marvellous virtue against blearedness of the eyes, *chanks*, and burning with fire."—Lupton: *Thousand Notable Things*.

chānks, s. pl. [Ceylonese (?), from Sansc. *cankha*.] [CONCH.] The same as CHANK-SHELLS (q. v.).

chank-shells, s. pl. A name given in the East Indies to certain varieties of the shell *Voluta gravis*, fished up by divers in the Gulf of Manaar, on the N. W. coast of Ceylon. There are two kinds, payel and patty, one red and the other white; the latter is of little value. These shells are imported into India, where they are sawn into rings of various sizes, and worn on the arms, legs, fingers, and toes by the Hindoos. A third species, opening to the right, is (as in most spiral shells) rare, and very highly valued. The demand for these shells, caused by the religious rites of the Hindoos, was so great that 60,000 rix-dollars (\$21,600) per annum were received by the Government for the right of fishing for them. Now the fishery is open and free to all.

"The natives, in addition to fishing for *chank shells* in the sea, dig them up in large quantities from the soil on the adjacent shores."—Tennent: *Ceylon*, pt. i. ch. i.

chan'-na, s. [It. *canna*; Lat. *channe*, *chane*, from Gr. *channē*. *chanē*=a sea-fish, so called from its wide mouth; *chainō*=to yawn, to gape.]

*chān'-nel, *chan-el, *chan-elle*, s. & a. [O. Fr. *canal*, *chenal*, from Lat. *canalis*=hollow. *Channel* and *canal* are doublets.] [CANAL.]

A. As substantive:

I. Ordinary Language:

1. Literally:

(1) The hollow bed of a stream of water, especially the deepest part, where the main current flows.

"Canal or chanelle. *Canalis*."—Prompt. Parv.

"The sandbanks and the shallows of the Zuyder Zee form one of the worst *channels* in the world, . . ."—London Times, Nov. 11, 1876.

(2) A narrow arm of the sea or strait running between two portions of land.

"As if a *channel* should be called a sea."

Shakesp.: *Henry VI.*, Pt. III., ii. 2.

(3) A gutter; a kennel. [KENNEL.]

"Gif thair be ony persoun that has ony biggit land, sic as cellaris, under the yeird, and the passage of thame furth farther than four fute, stoppand the *channel* and calsay."—Balfour: *Pract.*, pp. 387-8.

2. Figuratively:

(1) A hollow or cavity formed lengthwise.

"Complaint and hot desires, the lover's hell,
And scalding tears, that wore a *channel* where they fell."

Dryden: *Fables*.

In all his dressings, *characts*, titles, forms,
Be an arch-villain."
Shakesp.: Meas. for Meas., v. 1.

chär'-ac-tēr, ***car-ac-ter**, ***car-ec-ter**, *s.* [Lat. *character*=a sign or engraved mark; Gr. *charaktēr*, from *charassō*=to engrave.]

A. Ordinary Language:

I. Literally:

1. A stamp, mark, or sign, engraved or stamped.

"He shal make alle . . . for to haue a *caracter* in the right honde."—*Wycliffe: Apoc.*, xiii. 16.

2. A letter used in writing or printing.

"It were much to be wished, that there were throughout the world but one sort of *character* for each letter."—*Holder: Elements of Speech*.

"In 1521 the first Greek *characters* appeared, in a book printed at Cambridge."—*Hallam: Hist. Lit. Middle Ages*, ch. 5.

3. A style of handwriting; writing.

"I found the letter thrown in at the casement of my closet. You know the *character* to be your brother's."—*Shakesp.: King Lear*, i. 2.

*4. A cipher.

"He hath given my lord a *character*, and will oblige my lord to correspond with him."—*Pepys: Diary*, July 15, 1664.

II. Figuratively:

*1. Applied to the sign of the cross made upon the forehead of a child in baptism.

"... signed with the *character* of Christ in baptism, . . ."—*Briskett: Civil Life*, p. 175.

*2. A representation or description of any one as to his personal qualities.

"Each drew fair *characters*, yet none
Of these they feigned excels their own."
Denham: On Mr. Abraham Cowley, 87.

3. An unfavorable description or account of the natural qualities of a thing or place.

"This subterraneous passage is much mended, since Seneca gave so bad a *character* of it."—*Addison: On Italy*.

4. A distinguishing mark, feature, or trait of anything; a characteristic.

"The truest *characters* of Ignorance
Are Vanity, and Pride, and Arrogance."
Butler: Remains.

5. The personal qualities or attributes of a person; the moral and mental constitution.

"He was a man of parts and courage; but his moral *character* did not stand high."—*Macaulay: Hist. Eng.*, ch. v.

6. The quality or nature of anything.

"The method of experiment here pursued, though not of the simplest *character*, is still within your grasp."—*Tyndall: Frag. of Science* (3d ed.), viii. 14, p. 208.

7. A position, rank, post, or capacity.

"... they were sure of a market for such a slave as Joseph, and in that degraded and miserable *character* he arrived in Egypt."—*Milman: Hist. of Jews* (3d ed.), bk. ii., vol. i., p. 50.

8. A person or actor in a story, play, &c.; a personage.

"Mr. Booth satisfies those sagacious people who, having seen a *character* of Shakespeare performed in a certain manner, are intolerant of any attempt to diversify it and are sensitively jealous of modern thought."—*London Daily Telegraph*, May 5, 1881.

9. A person noted for any eminent quality.

10. A person noted for any peculiarity of manner, habits, or disposition. (*Colloquial*.)

"He's a *character*, and I'll humor him."—*Goldsmith: She Stoops*, ii. 1.

11. A part appropriated to anyone in a play.

"Those who have followed Mr. Booth through his various and varied *characters* know what a good actor he is and how earnest a student."—*London Daily Telegraph*, May 5, 1881.

12. An estimate of the personal qualities of a person; reputation, fame, report.

13. A certificate as to behavior, competency, &c., given by an employer to an employe when leaving him.

"Lady Spratt . . . had taken a discharged servant of Mrs. Leslie's without applying for the *character*."—*Lytton: My Novel*, bk. viii., ch. v.

¶ In *character*: Appropriate, in keeping with other things.

"Read it; is it not quite in *character*."—*Disraeli: Vivian Grey*, bk. ii., ch. 9.

Out of *character*: Inappropriate, incongruous.

B. Technically:

1. *Law*: Witnesses to the good character of a prisoner may be called, but they must not go into details. Witnesses to his evil reputation may be called to counterbalance their testimony, and when there has been a previous conviction it may be, and generally is, brought forward before sentence is passed. (*Wharton*.)

2. *Nat. Science*: A short definition expressing the essential marks by which an animal, a plant, or a mineral is distinguished from the others which most nearly resemble it.

fāte, **fāt**, **färe**, **amidst**, **whāt**, **fäll**, **father**; **wē**, **wēt**, **häre**, **camel**, **hër**, **thère**; **pīne**, **pīt**, **sire**, **sīr**, **marine**; **gō**, **pōt**, **or**, **wōre**, **wōlf**, **wōrk**, **whō**, **sōn**; **mūte**, **cūb**, **cūre**, **unite**, **cūr**, **rūle**, **fūll**; **trŷ**, **Sŷrian**. æ, œ = ē; ey = ā. qu = kw.

3. *Music*: A general name for the signs employed in music, such as brace, bind, bar, sharp, flat, natural, clef, stave, shake, &c. (*Stainer & Barrett*.)

¶ (1) Crabb thus distinguishes between *character* and *letter*: "Character is to *letter* as the genus to the species: every *letter* is a *character*; but every *character* is not a *letter*. Character is any printed mark that serves to designate something; a *letter* is a species of *character* which is the constituted part of a word. Short-hand and hieroglyphics consist of *characters*, but not of *letters*. Character is employed figuratively, but *letter* is not. A grateful person has the favors which are conferred upon him written in indelible *characters* upon his heart."

(2) He thus discriminates between *character* and *reputation*: "Character lies in the man; it is the mark of what he is; it shows itself upon all occasions; *reputation* depends upon others; it is what they think of him. A *character* is given particularly: a *reputation* is formed generally. Individuals give a *character* of another from personal knowledge; public opinion constitute the *reputation*. Character has always some foundation; it is a positive description of something; *reputation* has more of conjecture in it; its source is hearsay. It is possible for a man to have a fair *reputation* who has not in reality a good *character*; although men of really good *character* are not likely to have a bad *reputation*." (*Crabb: Eng. Synon.*)

chăř-ac-těr, †chă-răc-těr, v. t. [CHARACTER, s.]

chăř-côal, *chăř-cole, *chăř-coll, *chăř-kole, s. & a. [Eng. *char. v.*, and *coal*=that which is turned to coal or carbon.]

A. As substantive:

I. *Ord. Lang.*: The same as II. 1.

II. *Technically*:

1. An impure variety of carbon, prepared from vegetable substances or bones.

(1) *Wood charcoal* consists of wood burned with but little access of air. Billets of wood are built into a heap, which is covered with earth or sand. The heap is fired at openings left near the bottom of the pile, and the gases escape at small openings above. For making fine charcoal, such as that of willow, used in the manufacture of gunpowder, the wood is burned in iron cylinders, or rather retorts, in which a process of destructive distillation removes the volatile hydrocarbons, pyroligneous acid, &c. By this more perfect means the process is accurately regulated. Charcoal is used in the arts as—a fuel; a polishing powder; a table on which pieces of metal are secured in position to be soldered by the blowpipe; a filtering material; a defecator and decolorizer of solutions and water; an absorbent of gases and aqueous vapors; a nonconducting packing in ice-houses, safes, and refrigerators; an ingredient in gunpowder and fire-works; in the galvanic battery and the electric light.

(2) *Animal Charcoal*: Used largely in sugar-refining, and as a disinfectant and filtering medium, is prepared by calcining bones in closed vessels. These are either retorts, similar to those in which coal is distilled for the production of illuminating gas, or they are earthenware pots piled up in kilns and fired. Charges of fifty pounds of bones to a pot will require, say, sixteen hours of firing. The bones are then ground between fluted rollers, the dust removed, and the granulated material used for charging the filters of the sugar refiner. The material is used for removing color, feculencies, and fermenting ingredients from the syrup. [BONE-BLACK FURNACE.] (*Knight*.)

"Charcole (or charkole, P), Carbo."—*Prompt. Parv.*

"Seacole lasts longer than charcoal; and charcoal of roots, being coaled into great pieces, lasts longer than ordinary charcoal."—*Bacon: Natural History*.

2. A name for the finest tin-plates, so called from being manufactured with charcoal fires.

B. *As Adjective*: (See the compounds.)

charcoal-blacks, s. pl. Various black pigments essentially composed of charcoal, the latter formed by burning ivory, bones, vine twigs, &c.

charcoal-burner, s. A man employed in attending to the manufacture of charcoal.

"That evening [August 2, 1100] he [William Rufus] was found dead by some charcoal-burners."—*C. H. Pearson: The Early and Middle Ages of England*, ch. xxv.

charcoal-cooler, s. A wire cylinder in which animal charcoal is agitated and cooled, after revivifying, while a current of air carries off the noxious gases. (*Knight*.)

bôl, bôy; pout, jowl; cat, cell, chorus, chin, bench; go, gem; thin, this; sin, as; expect, Xenophon, exist. ph = f.
-cian, -tian = shăn. -tion, -sion = shŭn: -tîon. -sion = zhŭn. -tious, -cious, -sious = shŭs. -ble, -dle, &c. = bəl, dəl.

charcoal-filter, *s.* A filter charged with ordinary or animal charcoal for domestic use, or with animal charcoal for use in the sugar-house or refinery. (*Knight*.)

charcoal-furnace, *s.* A furnace for producing charcoal by the dry distillation of wood, and for the collection of the tar and pyroligneous acid resulting therefrom. (*Knight*.)

charcoal-point, *s.* A pencil of carbon prepared for use in the electric-light apparatus. (*Knight*.)

chard (1) *s.* [*Fr. carde; Ital. carda; Lat. carduus*=a thistle.]

Botany:

1. The leaves of the artichoke plants (*Cynara scolymus*), bound in straw during the autumn and winter, till they become blanched, and lose part of their bitterness.

2. (See extract.)

"Chards of beet, are plants of white beet transplanted, producing great tops, which, in the midst, have a large, white, thick, downy, and cotton-like main shoot, which is the true chard."—*Mortimer*.

chard-beet, *s.* A plant, *Beta cyclo*. It is cultivated for the strong succulent ribs of the leaves, which are boiled and eaten on the continent like asparagus.

char-din-i-a, *s.* [Named after the celebrated traveler Sir John Chardin, who was born in Paris in 1643, and died near London in 1713.]

Bot.: A genus of Composite plants, consisting of a single species, *Chardinia xeranthemoides*, a pretty little annual herb, found in Asia Minor. The flowers are silvery, nearly half an inch across, and owe their beauty to the shining, chaffy, lance-shaped pappus scales which crown the cylindrical striate achenes.

charge, ***chargen**, ***chargyn**, *v. t. & i.* [*Fr. charger; Sp. cargar; Port. carregar; Ital. caricare*, from Low Lat. *carico*=to transport in a wagon or car, from *carrus*=a car.]

(c) *With at* before the price charged.

(7) To demand a price.

"For oysters bred upon the salt sea-shore,
Packed in a barrel, they will charge no more."
Cowper: To Mrs. Newton.

(8) To accuse.

" . . . I am so far from charging you as guilty in this matter, that I can sincerely say, I believe the exhortation wholly needless."—*Wake: Preparation for Death*.

* (a) *With of* before the matter charged.

(b) *With with*.

"And his angels he charged with folly."—*Job iv. 18*.

* (9) To challenge; to call upon.

"Thou canst not, cardinal, devise a name
So slight, unworthy, and ridiculous,
To charge me to an answer as the pope."
Shakesp.: King John, iii. 1.

(10) To impose or lay on as a tax or duty.

"And for chef charyte, we chargeden vs seluen
In amending of this men, we maden oure celles."

2. To act as a charm; to be fascinating; to please highly.

"*Charm* by accepting, by submitting sway."

Pope: Epistle, ii. 263.

¶ Crabb thus distinguishes between *to charm*, *to enchant*, *to fascinate*, *to enrapture* and *to captivate*: "*To charm* expresses a less powerful effect than *to enchant*; a *charm* is simply a magical verse used by magicians and sorcerers: *incantation* or *enchantment* is the use not only of verses but of any mysterious ceremonies, to produce a given effect. *To charm* and *enchant* in this sense denote an operation by means of words or motions; *to fascinate* denotes an operation by means of the eyes or tongue. ... *Charms* and *enchantments* are performed by persons; *fascinations* are performed by animals; the former have always some supposed good in view; the latter have always a mischievous tendency. ... *To charm*, *enchant* and *fascinate*, are taken in the improper sense to denote moral as well as natural operations; *enrapture* and *captivate* have a moral application only. ... When applied to the same objects *charm*, *enchant* and *enrapture* rise in sense. (*Crabb: Eng. Synon.*)

"The effectiveness of well-devised processes of charting has been hitherto overlooked."—*Proctor: Rough Ways made Smooth*, p. 97.

chart'-īsm, *s.* [Eng. *chart*=charter; suff. *-ism*.] The principles or political views of the Chartists as set forth in the *People's Charter*.

"Chartism means the bitter discontent grown fierce and mad."—*Carlyle: Chartism*, ch. 1.

chart'-īst, *s.* [Eng. *chart*=charter; suff. *-ist*.]

A name given to a political party in England whose views were embodied in a document called the *People's Charter*. The chief points were, universal suffrage, vote by ballot, annual parliaments, payment of members, equal electoral divisions, and the abolition of property qualification for members. These principles were set out in a bill prepared in 1838. The party became divided in the following year, the extreme members advocating the employment of force for the attainment of their object. These were known as *Physical Force Chartists*. They perpetrated great outrages at Birmingham on July 15, 1839, and at Newport in Monmouth, on November 4 of the same year. Inspired by the proclamation of a republic in France early in 1848, they agreed to assemble on April 10 of that year to the number of 200,000 men, and march in procession to Parliament, to present a petition alleged to be signed by six millions of persons. Under the direction of the first Duke of Wellington, the Bank of England, the Postoffice, and other public buildings were in consequence temporarily fortified, while troops supported by artillery held the bridges. About 200,000 civilians were sworn in as special constables, among them being Mr. W. E. Gladstone and Louis Napoleon, afterward the Emperor Napoleon III. The petition was permitted to be delivered, and was found to have only two millions of signatures, many of them forged. The procession was forbidden, its suppression being facilitated by the suggestive fact that only about 20,000 had actually put in an appearance at the place of rendezvous. The rise of the Chartists was in large measure produced by distress, and with rising wages and cheapening food, the movement died away. Some of the most important points of the Charter, and notably household suffrage and vote by ballot, have been accepted by the legislature and are the law of the land.

A. Transitive:

1. *Ordinary Language:*

1. To pursue with a view to catching; to hunt.

"Tristrem on huntinge . . . An hert *chaci* bigan."

Tristrem, iii. 41.

2. To drive away; to pursue after an enemy.

"The Comaynz *chaced* him out of the contree."

Maundeville, p. 37.

*3. To put to flight.

" . . . the sound of a shaken leaf shall *chase* them; and they shall flee, as fleeing from a sword . . ."—*Lev. xvi. 36*.

4. To follow fast after; to succeed.

"To the pale-green sea-groves straight and high
Chasing each other merrily."

Tennyson: Merman, 2.

*II. *Figuratively:*

1. To follow up or pursue a subject.

"Schortly this matiere forth to *chace*."

Chaucer: C. T., 8,217.

*2. To follow after a thing as desirable; to strive after.

3. To cause to depart or move forward; to drive.

Scott: Marmion, vi. 15.

chāse (2), *v. t.* [A contracted form of *enchase* (q. v.).] To enrich or beautify metals by ornamenting them with figures or patterns in bas-relief; to emboss.

chāse (1), ***chāce**, ***chās**, *s. & a.* [Fr. *chasse*; O. Fr. *chace*; Sp. & Port. *caza*; Ital. *caccia*.]

A. As substantive:

1. *Ordinary Language:*

1. *Literally:*

(1) The act or custom of hunting wild animals.

"To make his hunting and his *chace*."—*Gower*, i. 53.

"The unwonted *chase* each nour employs,
Yet shares he not the hunter's joys."

Byron: The Giaour.

(2) The act of pursuing after an enemy; pursuit.

"The *chas* is left for thilke day."

Gower, i. 248.

*3. That which is hunted or pursued; the object of pursuit.

"Rich. Nay, Warwick, single out some other *chase*;
For I myself will hunt this wolf to death."

Shakesp.: Henry VI., Pt. III., ii. 4.

(4) Fitness for hunting.

"Frequent the forests, thy chaste will obey,
And only make the beasts of *chase* my prey."

Dryden: Palamon and Arcite, iii. 246.

2. *Law:* The act of acquiring possession of animals *ferce naturæ*, i. e., in a wild state, by force, cunning or address. The hunter acquires a right to such animals by possession, and they become his property. No one, however, has a right to enter on the lands of another for the purpose of hunting without the owner's consent, or to molest game animals during the close season.

3. *Figuratively:*

†(1) The act of pursuing eagerly after anything; an earnest effort after or pursuit of.

"Yet this mad *chase* of fame, by few pursued,
Has drawn destruction on the multitude."

Dryden: Juvenal.

*2. That which is sought eagerly after.

II. Technically:

1. An open hunting-ground or preserve for game, which is private property. It differs from a park in not being inclosed and in being of greater extent, and from a forest in being of less extent and endowed with fewer liberties. Every forest is a chase, but every chase is not a forest. (*Eng.*)

"The mere for his net, and the land for his game,
The *chase* for the wild, and the park for the tame."

Scott: Rokeby, iii. 30.

*2. A term at tennis, signifying the spot where a ball falls, beyond which a player has to drive his ball to gain a point or chase.

"T. I have two *chases*. I. Sir, the last is no *chase*, but a loss. T. Sir, how is it a loss? I. Because you did strike it at the second bound."—*Woodroffe: French and English Grammar*, p. 234 (1624).

B. As adj.: (See the compounds.)

chase-gun, *s.*

Ord.: A gun mounted at the bow to fire at a vessel being chased. It is fired from a chase-port.

chase-port, *s.*

Naut.: A port-hole at the bow of a vessel, from which the *chase-guns* are fired.

chāse (1), *s.* [A variant of *case* (q. v.).]

1. *Printing:* A rectangular iron frame which receives the matter from a galley, and in which it is arranged in columns or pages, and locked up in order for printing. Rules (if necessary) and furniture for spacing the pages are placed between the pages, and all locked firmly in the chase by wedges called quoins. The furniture consists of slips of wood or metal, half an inch in thickness, and of any required length. Those at the head, foot, and side are called head-sticks, foot-sticks, side-sticks. Those between the pages are called gutters. Gutenberg used screws to lock up his form in the chase. Quoins came later.

2. *Ordnance:* The portion of a gun forward of the trunnions to the swell of the muzzle. In modern guns, the swell is suppressed, and the chase extends to the muzzle.

3. *Masonry:* A groove cut in the face of a wall.

4. *Shipbuilding:* A kind of joint by which an overlap-joint gradually becomes a flush-joint, as at the hooding-end of clinker-built boats. A gradually deepening rabbet is taken out of each edge at the lands, so that the projection of each stake beyond the next below it gradually diminishes, and they fit flush with each other into the rabbets of the stem and stern post.

5. *Engin., &c.*: A groove, trench, or passage of a given width and depth to fit an object which traverses or fits therein: as—

(1) The chase or curved water-way, or breast in which a breast-wheel or scoop-wheel rotates. The sides of the chase fit as nearly as possible to the wheel, to prevent waste of water.

(2) The trench made by spades or machines for the reception of drain-tile. (*Knight.*)

chase-mortise, *s.*

Carp.: A method of fixing the ends of a transverse piece of wood into two holes or mortises in two joists, beams or other timber unyieldingly fixed in position. One end of the transverse piece being mortised into the one fixed timber, the other end is partly rotated around this as a center till it be fitted into a long groove cut for it in the other beam. This is the method by which ceilings are mortised into bridging joists.

"A stranger to respect or fear,
In peace a *chaser* of the deer."

Scott: The Lady of the Lake, vi. 4.

(2) A horse trained specially for hunting or steeple-chasing. [STEEPLE-CHASER.]

"They will certainly have to do more at this meeting than the *chasers*."—*London Daily News*.

2. *Naut.*: A gun at the bow or stern of a ship, used for firing when in chase.

chās'-ēr (2), *s.* [CHASE (2), v.]

1. *Ord. Lang.*: One who practices the art of chasing.

II. *Technically:*

1. *Mach.*: A tool for cutting threads in the hand-lathe; sometimes called a comb, from its having a row of projecting teeth. It is made of steel, and the teeth filed by hand or by a cutting hub. It is first forged in blank. The teeth are then filed or made by a hub (q. v.). The latter is a steel mandrel rotated on the centers of a lathe and having a section of screw-thread cut upon it. The thread is notched in places, so as to make cutting edges. Chasing by the graver may be merely engraving in lines, but is usually in the form of relief; parts of the metal being cut away, leaving protuberant portions of ornate form, and which are further beautified by graver-lines, frosting, milling, &c. The sand-bag supports the work while being chased by the graver. (*Knight.*)

2. *Metal.*: One of the edge-wheels which revolves in a trough, to grind substances to powder. [CHILIAN MILL; MORTAR-MILL; OIL-MILL.] Also used in grinding ore for puddling-furnaces, &c. (*Knight.*)

chās'-ēr (3), *s.* [Perhaps from *chase* (1), v.] A ram that has only one testicle.

(Upon my knees I ask it) buried chastely."

Baumont & Fletcher: Knight of Malta.

chās'-ten, ***chas-tien**, *v. t.* [O. Fr. *castier*, *chastier*; Sp. & Port. *castigar*; Ital. *castigare*; Lat. *castigo*=to make chaste or pure, from *castus*=pure, and *ago*=to make.] [*CHASTE*, *CHASTISE*.]

1. To correct with corporal punishment.

"Chasten thy son while there is hope, and let not thy soul spare for his crying."—*Proverbs* xix. 18.

2. To correct, subdue, or mortify the mind or heart.

"But observation tends to *chasten* the emotions and to check those structural efforts of the intellect which have emotion for their base."—*Tyndall: Frag. of Science* (3d ed.), ii. 31.

3. To make pure or free from faults; to purify, to expurgate.

¶ Crabb thus distinguishes between to *chasten* and to *chastise*: "*Chasten* has most regard to the end, *chastise* to the means; the former is an act of the Deity, the latter a human action. God *chastens* His faithful people to cleanse them from their transgressions, parents *chastise* their children to prevent the repetition of faults." (*Crabb: Eng. Synon.*)

2. Of language:

(1) Freedom from obscenity.

"There is not *chastity* enough in language,
Without offense to utter them."

Shakesp.: *Much Ado*, iv. 1.

(2) Purity; freedom from any intermixture of barbarous or affected expressions.

¶ Crabb thus distinguishes between *chastity* and *continence*: "These two terms are equally employed in relation to the pleasures of sense: both are virtues, but sufficiently distinct in their characteristics. *Chastity* prescribes rules for the indulgence of these pleasures; *continence* altogether interdicts their use. *Chastity* extends its views to whatever may bear the smallest relation to the object which it proposes to regulate; it controls the thoughts, words, looks, attitudes, food, dress, company, and in short the whole mode of living: *continence* simply confines itself to the privation of the pleasures themselves; it is possible, therefore, to be *chaste* without being *continent*, and *continent* without being *chaste*. *Chastity* is suited to all times, ages, and conditions; *continence* belongs only to a state of celibacy." (Crabb: *Eng. Synon.*)

***chêap**, ***chep**, ***chepe**, ***cheep**, s., a. & adv.

[A. S. *ceap*=price, *ceapian*=to cheapen, to buy; Dut. *koop*=a bargain; Icel. *kaup*=a bargain, *kaupa*=to buy; Sw. *köp*=a bargain; *köpa*=to buy; Dan. *kiøb*, *kiøbe*; Goth. *kaupon*=to traffic; O. H. Ger. *coufou*; M. H. Ger. *koufen*; Ger. *kaufen*=to buy, *kauf*=a purchase. The word was originally a substantive, and was never used as an adjective in the earlier periods. (Skeat.)]

A. As substantive:

1. A price, value.

"Hire *cheap* wes the wrse."—Layamon, i. 17.

"Chep. *Precium*."—Prompt. Parv.

*2. A market. In this sense the word survives in many local names, as *Eastcheap*, *Cheapside*.

¶ It is generally found in the compound phrases—*Good cheap* (an irritation of the French *bon marché*)=great plenty, very cheap; *better cheap*, *great cheap*, *dirt-cheap*. The phrase *dog-cheap*=*good cheap*, the former word being catachrestically transposed.

"Tricolorinus maketh the corn *good chepe* or *dere*."—Gower, ii. 168.

"To *gret chep* is holden at litel pris."

Chaucer: C. T., 6, 104.

"Each female eye the glittering links employ.

They turn, review, and *cheapen*, every toy."—Pope: Homer's Odyssey, bk. xv., l. 497-8.

¶ Crabb thus distinguishes between to *buy*, to *purchase*, to *bargain*, and to *cheapen*: "*Buy* and *purchase* have a strong resemblance to each other, both in sense and application, but the latter is a term of more refinement than the former. . . . *Buying* implies simply the exchange of one's money for a commodity; *bargaining* and *cheapening* have likewise respect to the price; to *bargain* is to make a specific agreement as to the price; to *cheapen* is not only to lower the price asked, but to deal in such things as are cheap." (Crabb: Eng. Synon.)

***chêap-ened**, ***chêap-ned**, pa. par. & a. [CHEAPEN, v.]

***chêap-ên-êr**, ***chêap-nêr**, s. [Eng. *cheapen*; *-er*.] One who bargains for or higgles about the price of anything; one who depreciates.

1. Ordinary Language:

1. To put a sudden restraint on; to cause to stop.

2. To restrain, so as to allow to move or progress less rapidly.

3. To repress, to curb, to restrain.

4. To reprove, to chide.

5. To go through and place marks against names

or items in a list, account, &c.

6. To ascertain or insure the correctness or authenticity of anything by comparing it with others.

"... but we have scanty means of checking and confronting it with other accounts."—*Lewis: Cred. Early Roman Hist.* (1855), ch. xiii., pt. 1, § 2, vol. ii., p. 363.

II. Technically:

†1. Chess: To make a move by which any one of the adversary's pieces, but especially the king, is put in check.

"Remove, confine, check, leave, or take,
 Dispose, depose, undo, or make,
 Pawn, rook, knight, queen, or king."—*Wither.*

2. Bookkeeping, &c.: To compare with an original or counterpart in order to secure accuracy and correctness.

II. Falconry: To stop, to hover over the game; to change the game while in pursuit, especially for an inferior kind.

"... like the haggard, check at every feather
 That comes before his eye."
Shakesp.: Twelfth Night, iii. 1.

¶ (1) Crabb thus distinguishes between to check, to curb, and to control: "To check is to throw obstacles in the way to impede the course; to curb is to bear down by the direct exercise of force, to prevent from action; to control is to direct and turn the course: the actions of men are checked; their feelings are curbed; their actions or feelings are controlled. External means are employed in checking or controlling; external or internal means are employed in curbing; men check and control others; they curb themselves or others; young people ought always to be checked whenever they discover a too forward temper in the presence of their superiors or elders; it is necessary to curb those who are of an impetuous temper, and to keep youth under control, unless they have within themselves the restrictive power of judgment to curb their passions and control their inordinate appetites."

(2) He thus discriminates between to check, to chide, to reprimand, to reprove, and to rebuke: "The idea of expressing one's disapprobation of a person's conduct is common to all these terms. A person is checked that he may not continue to do what is offensive; he is chidden for what he has done that he may not repeat it; impertinent and forward people require to be checked, that they may not become intolerable; thoughtless people are chidden when they give hurtful proofs of their carelessness. People are checked by actions and looks as well as by words; they are chidden by words only: a timid person is easily checked . . . the young are perpetually falling into irregularities which require to be chidden. To chide marks a stronger degree of displeasure than reprimand, and reprimand than reprove or rebuke . . . Chiding and reprimanding are employed for offenses against the individual, and in cases where the greatest disparity exists in the station of the parties: a child is chid by his parent; a servant is reprimanded by his master. Reproving and rebuking have less to do with the relation or station of the parties than with the nature of the offense; wisdom, age, and experience or a spiritual mission give authority to reprove or rebuke those whose conduct has violated any law human or divine

(3) The difference between to check and to stop is thus stated: "To check is to cause to move slowly; to stop is to cause not to move at all: the growth of a plant is checked when it does not grow so fast as usual; its growth is stopped when it ceases altogether to grow: the water of a river is stopped by a dam; the rapidity of its course is checked by the intervention of rocks and sands. When applied to persons, to check is always contrary to the will of the sufferer; but to stop is often a matter of indifference, if not directly serviceable: one is checked in his career of success by some untoward event; one is stopped on a journey by the meeting of a friend." (*Crabb: Eng. Synon.*)

chēck, *chēk, chēque, *checque, *s. & a.* [O. Fr. *eschec*=a check at chess, from Pers. *shāh*=king.] [CHECKMATE, CHESS.]

A. As substantive:

I. Ordinary Language:

1. In the same sense as II. 1.

2. The act of suddenly stopping anything in its course.

3. That which causes anything to stop.

4. The act of restraining, curbing, or repressing; restraint, repression.

5. That which restrains, curbs, or represses.

6. A reproof, a slight, a rebuke or rebuff.

*7. A dislike, a sudden disgust, causing one to suddenly pause in the pursuit of anything.

"Say I should wed her, would not my wise subjects
 Take check, and think it strange? perhaps revolt?"
Dryden: Don Sebastian, ii. 1.

8. A stop, an interruption.

9. Anything by comparison with which the correctness or authenticity of a document, statement, &c., may be ascertained (generally with *on* or *upon*).

10. A pass, consisting of either a ticket or a piece of metal, duly stamped, entitling a person who wishes to leave a theater or other place of amusement for a time to return without having to pay again.

II. Technically:

1. Chess: The result of a movement by which the adversary's king is placed in such a position that if

fāte, fāt, fāre, amidst, whāt, fāl, father; wē, wēt, hēre, camēl, hēr, thēre; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trŷ, Sŷrian. æ, œ = ē; ey = ā. qu = kw.

it were any other piece it could be taken. [CHECK-MATE.] The king is, in such cases, said to be *in check*, and notice of the effect of the move is given by calling out *Check!*

"And e'en the ranks of Tuscany
Could scarce forbear to cheer."
Macaulay: Horatius, xl.

† Crabb thus distinguishes between to cheer, to encourage, and to comfort: ". . . To cheer and comfort have both regard to the spirits, but the latter differs in degree and manner: to cheer expresses more than to comfort; the former signifying to produce a lively sentiment, the latter to lessen or remove a painful one; we are cheered in the moments of despondency, whether from real or imaginary causes; we are comforted in the hour of distress. Cheering is mostly effected by the discourse of others; comforting is effected by the actions, as well as the words, of others. Nothing tends more to cheer the drooping soul than endearing expressions of tenderness from those we love; the most effectual means of comforting the poor and afflicted, is by relieving their wants." (*Crabb: Eng. Synon.*)

chēer, *chēare, *chēere, *chēere, *chēer, *chēiere, s. [O. Fr. *chere*, *chiere*; Ital. *cera*; Sp. & Port. *cara*, from low Lat. *cara*=a face; Gr. *kara*=the head; Sansc. *ciras*=the head.]

*3. A state of feeling or spirits.

"Then were they all of good cheer, and they also took some meat."—*Acts* xxvii. 36.

4. A joyful or cheerful state of mind; gaiety, alacrity.

"I have not that alacrity of spirit,
Nor cheer of mind, that I was wont to have."
Shakesp.: Richard III., v. 3.

"His voice had lost its ring, the cheer was out of it."—*G. Macdonald: Paul Faber*, vol. iii., ch. 3, p. 38.

*5. An invitation to gaiety.

"You do not give the cheer, the feast is sold
That is not often vouched, while 'tis a making,
'Tis given with welcome."
Shakesp.: Macbeth, iii. 4.

6. An entertainment; things provided calculated to raise the spirits or increase gaiety.

"Greet cheere made oure ost us everichon."

II. *Objec.*: Inspiring cheerfulness; cheering, gladdening.

"The *cheerful* psalter bring along,
And harp with pleasant string,"
Milton: Trans.; Ps. lxxxi.

¶ (1) Crabb thus distinguishes between *cheerful*, *merry*, *sprightly*, and *gay*: "*Cheerful* marks an unruffled flow of spirits; with *mirth* there is more of tumult and noise; with *sprightliness* there is more buoyancy; *gaiety* comprehends *mirth* and indulgence. A *cheerful* person smiles; the *merry* person laughs; the *sprightly* person dances; the *gay* person takes his pleasure. . . . *Cheerfulness* is an habitual state of the mind; *mirth* is an occasional elevation of the spirits; *sprightliness* lies in the temperature and flow of the blood; *gaiety* depends altogether on external circumstances. . . . *Sprightliness* and *mirth* are seldom employed but in the proper sense as respects persons; but *cheerful* and *gay* are extended to different objects; as a *cheerful* prospect, a *cheerful* room, *gay* attire, a *gay* scene, *gay* colors, &c.

(2) For the difference between *cheerful* and *glad* see GLAD.

chëer-fül-lý, **chëar-fül-lý*, *adv.* [Eng. *cheerful*; *-ly*.] In a cheerful manner; with gaiety or liveliness; readily or with alacrity.

A. *As substantive*:

1. The curd or caseine of milk, with variable quantities of butter and common salt, pressed into molds and ripened by keeping. The various kinds of cheese differ chiefly in the mode of manufacture, the amount of fat which they contain, and in the flavor, which is due partly to the food, and partly to the breed of the animal. In this country, and in England, cheese is made from the milk of the cow, but on the continent of Europe it is made from goat's milk and ewe's milk, while in Arabia it is prepared from the milk of the camel and the mare. There are three kinds of cheese, viz., whole-milk, skim-milk, and cream-cheese. Whole-milk cheese is made from unskimmed milk and contains from 20 to 40 per cent. of fat or cream, and 30 to 50 per cent. of caseine. Skim-milk cheese is poor in fat, containing from 1 to 4 per cent. Cream-cheese contains from 60 to 70 per cent.

Authorities differ as to the dietetic value of cheese, some affirming that it is very indigestible, while others assert that it assists digestion. Its digestibility, however, varies with its age, its texture, and its composition, and it is possible that it may produce different effects on different persons. Cream-cheese is more digestible than any other kind of cheese, owing to its containing less caseine.

Cheese is rarely adulterated. To suit the public taste it is frequently colored with annatto, or some other vegetable color, and so long as the coloring matter is not injurious, it cannot be considered an adulteration.

2. (Sing. *cheese*, or more frequently pl. *cheeses*): The fruit of two species of Mallow—(1) *Malva sylvestris*, and (2) *M. rotundifolia*.

¶ To make a *cheese*: To make a low courtesy.

"She and her sister both made these *cheeses* in compliance to the new-comer, and with much stately agility."—*Thackeray*.

B. *As adj.*: (See the compounds.)

cheese-board, *s.* The cover of the cheese-vat.

cheese-bowl, **che-bole*, **chesse-bolle*, **chese-bolle*, *s.* Two species of Poppy—(1) *Papaver somniferum*, (2) *P. Rhæas*.

cheese-cake, **chese-cake*, *s.* A sweet confection, made of soft curds, sugar, and butter.

"The difference between a gentleman that should make *cheese-cakes*, and raise paste, and a lady that reads Locke, and understands the mathematics."—*Spectator*, No. 242.

¶ *Cheese-cake grass*: A provincial name for Bird's-foot trefoil, *Lotus corniculatus*.

cheese-cement, *s.* A kind of glue, particularly serviceable in joining broken china, wood that is exposed to wet, painter's panels, boards, &c.

cheese-cutter, *s.*

1. A device used in cheese-making for breaking the curd into small pieces that the whey may more readily exude. (*Knight*.)

2. A curved slice for cutting cheese.

3. A boy's cap with a long curved peak. (*Slang*.)

**cheese-fat*, **cheese-fatte*, **chese-fatte*, *s.* [CHEESE-VAT.]

"*Chesefatte*. Casearium, fescina."—*Prompt. Parv.*"

cheese-fly, *s.*

Entom.: A small black insect, *Piophilæ casei*. It is of the family Muscidae. [CHEESE-HOPPER.]

cheese-hake, *s.* A frame for drying cheeses when newly made. [HAKE.]

cheese-hoop, *s.* An open-ended cylinder, made usually of wood, in which curds are pressed, to expel the whey and acquire a form.

cheese-hopper, *s.*

1. The larva of the cheese-fly, *Piophilæ casei* (q. v.). It feeds on cheese. The term hopper is added because of the long bounds it makes, the process being that the animal contracts itself into a hoop and then suddenly straightens itself again. The perfect insect is the cheese-fly (q. v.). (*Dallas*.)

2. A name sometimes given to the perfect insect of *Piophilæ casei* by those who know the connection between it and the larva.

Cheese-hopper.

cheese-knife, *s.* A large spatula, used in dairies to break down the curd.

cheese-lep, **chese-lep*, **cheslep*, *s.* A bag in which rennet for cheese is kept.

"A *Cheslep*; lactis."—*Cathol. Anglicum*.

cheese-mite, *s.*

Entom.: *Acarus domesticus*, a minute wingless spider, found abundantly in old cheese, the powder of which consists entirely of them, with their eggs and excrements. The body is soft, oval, and of a whitish color, furnished with long feathery hairs.

cheese-monger, *s.* One who deals in cheese.

cheese-mold, *s.*

1. Blue mold of cheese.

2. *Bot.*: A hyphomycetous fungus, *Aspergillus glaucus*.

cheese-paring, *cheeseparing*, *s. & a.*

A. *As subst.*: A paring or thin rind of cheese.

"... like a man made after supper of a *cheese-paring* . . ."—*Shakesp.: Henry IV.*, iii. 2.

B. *As adjective*:

1. *Lit.*: Paring or cutting off the rind of cheese.

2. *Fig.*: Niggardly, mean, miserly.

"During many years of a *cheeseparing* administration."—*London Standard*.

cheese-press, *s.* The press in which the curds are pressed in the manufacture of cheese.

cheese-rack, *s.* The same as CHEESE-HAKE (q. v.).

"My kirnstaff now stands gizzen'd at the door,
My *cheese-rack* toom that ne'er was toom before."

Fergusson: Poems, ii. 8.

cheese-rennet, *cheese-renning*, *cheese-running*, *s.*

Bot.: A name applied to a plant, Ladies' Bed-straw, *Galium verum*, in allusion to its property of coagulating milk, for which purpose it was actually formerly used. [RENNET.]

cheese-room (1), *s.* A room where cheeses are kept.

cheese-room (2), *s.* [Etymol. unknown.]

Bot.: A common provincial name for the Horse-mushroom, *Agaricus arvensis*, which grows in large rings, often many yards in diameter. It is known

Cheese-mite.

bōil, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, this; sin, aş; expect, Xenophon, exist. ph = f. -cian, -tian = şan. -tion, -sion = şūn; -tion, -şion = zhūn. -tious, -cious, -sious = şūs. -ble, -dle, &c. = beł, deł.

from the true mushroom by its large size, paler gills, generally thick rings, which are double at the base, but especially by their turning yellow when bruised. It is largely used as an article of food, and when properly dressed, and eaten in moderate quantities, with plenty of bread to insure mastication, is excellent. (*Treas. of Bot., &c.*)

cheese-shelf, *s.* One constructed for holding cheeses during the process of ripening. Ingenuity has been exercised in saving the time in turning the cheeses singly day by day, by inverting the whole shelf with its row of cheeses. [*CHEESE-TURNER.*]

***cheese-toaster**, *s.* A ludicrous name for a sword.

"I'll drive my cheese-toaster through his body."—*Thackeray: Virginians*, ch. x.

cheese-turner, *s.* A shelf capable of being inverted, so as to turn over the cheeses laid upon it—a daily duty during the progress of the ripening of the cheese.

cheese-vat, ***cheese-fatte**, ***ches-fatt**, *s.* The vat or frame in which the curds are confined while being pressed into cheese.

"His sense occasions the careless rustic to judge the sun no bigger than a cheesevat."—*Glanville.*

chēes'-y, *a.* [*Eng. chees(e); -y.*] Having the nature or form of cheese.

"Acids mixed with them precipitate a tephaceous chalky matter, but not a cheesy substance."—*Arbuthnot: On Aliments.*

ḡheet, *v. i.* [*Formed from the sound.*] To emit a chirrup, as a bird.

ḡheet, *interj.* [*From Fr. chat=a cat(?).*] A call addressed to a cat when one wishes her to approach. Generally reduplicated *cheet, cheet.*

ḡhēe-tah, **chēe-ta**, **ḡchē-tah**, *s.* [*Hindust. chitā, cognate with chitta=spotted, and chhit=a spot; Mahratta chitā; Sansc. tshitraka=the cheetah.*] [*CHETAH.*]

ḡchef, *s.* [*Fr.=chief.*] A title frequently applied to a head or professional cook.

chef d'orchestre, *s.* [*Fr.*] (1) The leader; (2) conductor of an orchestra. (*Stainer & Barrett.*)

chef-d'œuvre (*pron. shā-dōvr; pl. chefs-d'œuvre*), *s.* [*Fr., lit. a chief or masterpiece of work.*] A masterpiece; a work of superior excellence in art, literature, &c.

***chēf-froun**, ***shāf-froun**, ***sāf-ēr-ōn**, *s.* [*Fr. chapéron=a hood, a French hood for a woman; also any hood, bonnet, or letice cap. (Cotgrave.)*] A kind of ornamental head-dress for ladies.

ḡhēg'-ōe, **ḡhīg'-ōe**, *s.* [*Sp. chico=small.*] A small black flea (*Pulex penetrans*), peculiar to South America and the West Indies. The female burrows in and under the skin, and there deposits its eggs, causing great irritation and resulting in painful ulcers.

***ḡheif'-tyme**, *s.* [*O. Scotch cheif=chief, and tyme=time.*] The time of one's being chief, one's reign, a reign.

chei-lān'-thē-æ, *s. pl.* [*Mod. Lat. cheilanthes*], and *fem. pl. suff. -eae.*

Bot.: A section of polypodiaceous ferns, in which the sori are punctiform at the apices of the veins, and covered by indusia. Type, *Cheilanthes*.

chei-lān'-thēs, *s.* [*From Gr. cheilos=a lip, and anthos=a flower.*]

Bot.: A genus of polypodiaceous ferns, the typical one of the group *Cheilanthes*. The species, which are numerous, are spread over the tropical and temperate regions of the Old and New Worlds. They are for the most part dwarf plants, inhabiting dry rocky situations. The distinguishing features of the genus consist in its producing small punctiform sori at the ends of the veins close to the margin of the frond, the margin itself becoming membranaceous and bent over them to form the indusia, which are either linear and continuous, or take the shape of roundish lobes.

chei-lō-dāc'-tyl'-ūs, *s.* [*Gr. cheilos=a lip; daktylos=a finger.*]

Ichthy.: A genus of ovate-bodied fishes belonging to the family *Chaetoniidae*. They have small mouths and dorsal fins, with numerous spiny rays.

chei-lō-dīp'-tēr-ūs, *s.* [*Gr. cheilos=a lip; dipteros=double-finned, from dis=twice, and pteron=a wing, a fin.*]

Ichthy.: A genus of Acanthopterygious fishes, belonging to the Percidae or Perch family. Most of the species inhabit the Indian seas.

chei-lōg'-nā-thā, *s.* [*CHILOGNATHA.*]

***chei-lōs'-ḡyph-ūs**, *s.* [*Gr. cheilos=a lip, a brink, an edge, and skyphos=a cup.*]

Bot.: A genus of Jungermanniæ (*Hepaticæ*), founded upon *Jungermannia polyanthus* (Linn.), which is not infrequent in wet places. (*Griff. & Henfrey.*)

***chei-lō-stōm'-ā-tā**, *s.* [*Gr. cheilos=a lip, an edge, and stoma=a mouth.*]

1. *Zoöl.*: A sub-order of Infundibulate (Marine) Polyzoa, having the orifice of the cell filled with a thin membranous or calcareous plate, with a curved mouth, furnished with a movable lip. It is divided into two sections: (1) *Articulata*, containing the families *Salicornariadæ* and *Cellulariadæ*, and (2) the *Inarticulata*, containing numerous families. [*INARTICULATA.*]

2. *Palæont.*: Representatives of the Cheilostomata seem to have come into existence as early as the Silurian times, but most of the species found have been Cretaceous or Tertiary.

***chei-lō-stōm'-ā-toūs**, *a.* [*Gr. cheilos=a lip, and stoma=a mouth.*] Of the nature of or belonging to the Cheilostomata (*q. v.*).

"The ovicell is a structure especially characteristic of the cheilostomatous polyzoa."—*Nicholson: Palæont.* (2d ed.), ii. 418.

ḡheim, *v. t.* [*Probably a corruption of Eng. chine (q. v.).*] To divide equally, especially in cutting down the backbone of an animal.

ḡhēip, **ḡhēpe**, *s.* [*CHEEP, v.*] A chirping, squeaking, or creaking.

ḡheip (1), **ḡheep**, **ḡhepe**, *v. i.* [*From the sound.*]

1. To peep, to chirp, as young birds in the nest.

2. To squeak with a shrill and feeble voice.

"... the maxim of the Douglasses, that it was 'better to hear the lark sing, than the mouse cheep,' was adopted by every border chief."—*Border Minstrelsy*, Pref. lxxvi.

3. To mutter (applied metaphorically to man).

"Thair wyfis hes maistry,

That thay dar naways cheip."

Bannatyne: Poems, p. 179, st. 7.

4. To creak. In this sense shoes are said to *cheip* when they retain the music of the last. A door is also said to *cheip* when the sound occasioned by its motion grates the ear.

***ḡheip** (2), *v. t.* [*CHEAP, v.*] To buy or sell.

ḡhēip, *s.* [*CHEEP, s.*]

ḡhēip'-ēr, *s.* [*Cheip* (1), *v.*; *-er.*]

1. *Zoöl.*: The Cricket, an insect so named from the noise it makes.

2. *Bot.*: The Bog-iris, so called because children make a shrill noise with its leaves.

ḡhēip'-īng, *pr. par., a. & s.* [*CHEEPING.*]

cheir, *s.* [*From Gr. cheir=the hand.*]

Wild cheir: The Wallflower, *Cheiranthus cheiri*.

cheir-ā-cān'-thūs, *s.* [*From Gr. cheir=the hand, and akantha=a thorn, a prickly.*]

Palæont.: A genus of ganoid fishes founded by Agassiz for species from the Old Red Sandstone of Gowrie in Forfarshire, Scotland, and of the Orkney Islands.

cheir-ān'-thēr-ā, *s.* [*Gr. cheir=a hand; Lat. anthera=an anther, from Gr. anthēros=blooming.*]

Bot.: A genus of Pittosporaceæ, containing an Australian undershrub with erect stems and narrowly linear acute leaves; peduncles terminal, with small blue corymbose flowers; calyx of five sepals; petals and stamens five each; fruit dry, two-celled.

cheir-ān'-thūs, *s.* [*Gr. cheir=the hand, and anthos=a flower.*]

Bot.: A genus of cruciferous flowers, of which *Cheiranthus cheiri*, the Wallflower, is well known. In its wild state the flowers are always single and of a bright yellow color, but the cultivated plants produce a wide variety of tints. The Wallflower is by some supposed to be the *Viola* of the Latin poets. [*WALLFLOWER.*]

chei-rōg'-nō-mý, *s.* The same as *CHIROGNOMY* (*q. v.*).

***cheir-ō-gāl'-ē-ūs**, *s.* [*Gr. cheir=the hand, and galeos=a young weasel or kitten.*]

Zoöl.: A genus of *Quadrumania* belonging to the *Lemuridæ* (*q. v.*).

cheir-ōl'-ēp-is, *s.* [*Gr. cheir=the hand, and lepis=a scale.*]

Palæont.: A genus of fossil fishes found in the Old Red Sandstone of Morayshire, Scotland, and the Orkney Islands. (*Miller: Old Red Sandstone*, ch. iv.) It is doubtfully referred to the *Lepidosteidæ*. It is akin to *Palæoniscus*.

cheir-ōl'-ō-ḡy, *s.* [*Gr. cheir=the hand, and logos=a discourse, a treatise.*] A treatise on the language of the hands; also a mode of conversing with manual signs practiced by the deaf and dumb.

cheir-ōm'-y-dæ, *s. pl.* [*From Mod. Lat. cheiromys (q. v.), and fem. pl. adj. suff. -idæ.*]

Zoöl.: A family of mammals, order *Quadrumania*, tribe or section *Strepsirhina*.

***cheir-ō-mýs**, *s.* [*Gr. cheir=a hand, and mus=a rat.*]

Zoöl.: The genus containing the Aye-aye, a singular animal inhabiting Madagascar. It is the Aye-aye Squirrel of Pennant. Swainson classed it among the *Rodentia* or *Glires*; it is now placed near the *Lemurs*. It is *Cheiromys madagascariensis*, formerly called *Sciurus madagascariensis*. Its large and flat ears resemble those of a bat, while its habits approach those of the squirrels. It is of a musk-brown color mixed with black and ash-gray; tail black.

chei-rō-nēc'-tēs, *s.* [*Gr. cheir=the hand; nēcō=to swim.*]

1. *Ichthy.*: The Frog-fish, the name given by Cuvier to a genus of Acanthopterygian fishes, comprising some of those fishes popularly known under the name of Anglers. They are most grotesquely and hideously shaped, having the pectoral fins supported like short feet on peduncles, by means of which they can creep over mud or sand when left dry by the receding tide. [*ANGLER.*]

2. *Zoöl.*: A name given by Illiger to a genus of marsupial animals, the opossums, in which the hinder legs are webbed. [*DIDELPHIDÆ.*]

chei-rōn'-ō-mý, *s.* [*Gr. cheir=the hand; nomos=a law, a regulation.*] The management of the hands with appropriate movements and gestures in speaking.

"*Cheironomy* or the decorous and expressive movement of the hands being especially practiced."—*Grote: Hist. Greece*, ch. xxix.

chei-rō-pleūr'-ī-ā, *s.* [*Gr. cheir=hand; pleura=a rib.*]

Bot.: A synonym of *Anapansia*, applied to *A. vespertilio*, and *A. bicuspis*, two ferns which are remarkable in bearing fronds of a form resembling bats' wings.

***cheir-ō-pēds**, ***cheir-ōp'-ōd-ā**, *s. pl.* [*From Gr. cheir=the hand, and pous, genit. podos=a foot.*]

Zoöl.: Ogilby's name for the mammals possessed of hands, all of which he brings together, dividing them again into *Bimana* (two-handed, including man); *Quadrumania* (four-handed, including monkeys); *Pedimania* (foot-handed, including the lemurs, cebidæ, the cheiromys, and the didelphidæ). His views have not been adopted by other zoölogists.

cheir-ōp'-ō-dist, *s.* [*CHIROPODIST.*]

ḡcheir-ōp'-tēr, *s.* [*CHEIROPTERA.*] A mammal belonging to the order *Cheiroptera* (*q. v.*).

cheir-ōp'-tēr-ā, *s. pl.* [*Gr. cheir=the hand; pteron=a wing.*]

1. *Zoöl.*: The name of a natural order or tribe of mammiferous animals, having the fingers elongated for the expansion of membranes which act as wings. It contains the bats. They are widely spread over the globe. Generally speaking they remain in concealment during the day in hollow trees, caverns, ruins, &c., and flit forth at dusk to seek their prey, which consists principally of flies. The genera and species are numerous. The *Cheiroptera* are divided primarily into *Frugivorous Bats* and *Insectivorous Bats*, the first tribe containing only one family, *Pteropidæ* (the Fox-bats, or *Roussettes*), and the second three, viz., *Vespertilionidæ* or *Typical Bats*, the *Rhinolophidæ* or *Horseshoe Bats*, and *Phyllostomidæ*, *Vampire Bats* or *Vampires*.

2. *Palæont.*: Bats have been found as early as the Eocene.

cheir-ōp'-tēr-ōus, *a.* [*Eng. cheiropter(a); -ous.*] Of or belonging to the *cheiroptera*; having elongated fingers or toes for the expansion of membranes which act as wings.

Cheiropter.

Cheilanthes.

1. *Cheilanthes argentea* (portion of underside of frond.)
2. *Cheilanthes farinosa* (ditto fertile segment enlarged).

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camel, hēr, thēre; pine, pīt, sīre, sīr, marine; gō, pōt, or. wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rūle, fūll; trȳ, Sȳrian. æ, œ = ē; ey = ā. qu = kw

cheir-ōs'-pōr-ā, *s.* [Gr. *cheir*=the hand; *spora*=a seed.]

Bot.: A genus of Melanconiei (Coniomycetous Fungi), growing upon the twigs of the beech. The heads are formed of chains of spores, like a Pencillium. (*Griff. & Henfrey.*)

cheir-ō-stē-mōn, *s.* [Gr. *cheir*=hand; *stēmon*=a stamen. So called from the hand-like form of the anthers.]

Bot.: A genus of Sterculiads, of which *Cheirostemon platanoides*, the Hand-flower tree, or Macpalxochitlquahuil of the Mexicans, is the sole species. It is a tree growing thirty or more feet in height, and having plane-like leaves of a deep green color on the upper surface, but colored underneath with a rust-colored scurf composed of star-like hairs; each leaf being about six inches long by five broad, deeply indented at the base, and divided at the margin into from three to seven blunt-rounded lobes. The flowers are two inches long, by as much broad, with a leathery rusty-red, cup-shaped calyx; stamens bright-red, united for about one-third of their length, and then separated into five curved claw-like rays, bearing some slight resemblance to the human hand. Forests of the tree exist near the city of Guatemala. (*Treas of Bot.*)

cheir-ō-stŷ'-līs, *s.* [Gr. *cheir*=the hand; *stylos*=a style.]

Bot.: A genus of terrestrial orchids, consisting of little plants, with the habit of Anætochilus, to which it is nearly allied. It has the three sepals united into a short tube, from the front of which hangs down a lip divided into narrow lobes.

cheir-ō-thēr'-ī-ūm, *s.* [Gr. *cheir*=the hand; *thērion*=a wild beast.]

Palæont.: A name given to an animal whose footprints, resembling those of a hand, are found impressed on New Red Sandstone on the European Continent and in England. It is considered by Professor Owen to have been a large Batrachian reptile, for which he proposes the name Labyrinthodon, from the peculiar labyrinthian structure of its teeth. [LABYRINTHODON.]

cheir-ūr'-ī-dæ, *s. pl.* [From Mod. Lat. *cheirurus* (q. v.), and fem. pl. adj. suff. *-idæ*.]

Palæont.: A family of Trilobites. The head shield is well developed, and there are eleven, ten, or twelve body rings.

cheir-ūr'-ūs, *s.* [From Gr. *cheir*=a hand, and *oura*=a tail.]

Palæont.: A genus of Trilobites, the typical one of the family Cheiruridæ. It is found in the Silurian.

chek-mak, *s.* [Turkish.]

Fabrics: A Turkish fabric of silk and gold thread, mixed with cotton.

chē-lā, *chele*, *s.* [Gr. *chēlē*=a claw.]

1. *Sing.* (Of the form *chele*) (*Owen*): One of the bifid claws of the Crustacea. Scorpions, &c. [CHELY.]

2. *Pl.* *Chelæ*: The modified fourth pair of thoracic limbs in lobsters and their allies; the modified mandibles in scorpions. (*Huxley.*)

3. *Ichthy.*: A genus of fishes belonging to the Salmonidæ, sub-family Cyprinæ. The mouth is very small, and opens vertically; anal fin long.

chē-lāte, *a.* [Gr. *chēlē*=a claw.] Having the form or appearance of a claw; possessed of claws.

"The foremost two pairs [legs] are terminated by double claws, arranged so as to form a pincer, whence they are said to be *chelate*."—*Huxley: Crayfish*, p. 20.

***che-laun-dre**, *s.* [CHALANDRIE.]

"Than is blisful many sithe,
The *chelaundre*, and the papyngay."
Romaunt of the Rose.

***chele** (1), *s.* [CHILL.]

"Her is *chele* and hete."
Old Eng. Miscell. (ed. Morris), p. 73.

chēl-ē-rŷth'-rīne, *s.* [From Mod. Lat. *chelidonium*; Gr. *erythros*=red, and Eng. suff. *-ine* (*Chem.*) (q. v.).] A substance obtained in the form of a gray powder from the plants *Chelidonium majus* and *Glaucium luteum*, which powerfully excites sneezing. Under the action of acids it takes a fine orange color, and forms neutral salts, which act as narcotics when taken in small doses.

chēl-eū'-tite, *s.* [From Gr. *chēleutos*=netted, plaited, and Eng. suff. *-ite* (*Min.*).]

Min.: A variety of Smaltine (q. v.). (*Brit. Mus. Cat.*)

chēl-īç'-ēr-ā, **chēl-īç'-ēr-ēs**, *s.* [Gr. *chēlē*=a claw; *keras*=a horn.] A name given by Latreille to two appendages on the heads of spiders and scorpions, which he considers as representing the mesial antennæ of the Decapod Crustaceans, converted in these Arachnidans into organs for the seizure of food.

chēl-īch'-nūs (*ch* guttural), *s.* [From Gr. *chēlē*=a horse's hoof, a bird's talons, a wolf's claws, &c., and *ichnos*=a footstep.]

Palæont.: A temporary and provisional genus, formed for the reception of certain footprints like those made by chelonians. *Chelichnus Duncani* (Sir William Jardine) is the name given to certain footprints in the Permian rocks of Annandale, Scotland. It is doubtful if they were really made by chelonians, and when it is discovered what animal really produced them, the term *Chelichnus* will be superseded, as Cheirotherium was by Labyrinthodon. (See these words.)

***chēl-īd'-ēr-ēct**, *s.* [O. Fr. *chelydre*=“a most venomous and stinking snake, or serpent; rough-scaled, broad-headed, and of a dark, tawny color.” (*Cotgrave.*)] A kind of serpent; a basilisk. [CHELIDRE.]

“Thair was the Viper, and th' Aspect,

With the serpent *Chelidre* erect,

Quhois stink is felt afar.”

Burel: Flg., Watson's Coll., ii. 21.

chēl-ī-dōn (1), *s.* [CELANDINE.]

chēl-ī-dōn (2), *s.* [Gr. *chelidōn*=a swallow . . . a hollow above the bend of the elbow (so called from being like the fork in a swallow's tail).] The hollow at the flexure of the arm.

chēl-ī-dōn'-īc, *a.* [Eng. *chelidon*; *-ic*.] Pertaining to or derived from chelidon, 1.

chelidonic acid, *s.*

Chem.: C₇H₄O₅. A tribasic acid, which occurs combined with lime in *Chelidonium majus*. It crystallizes in colorless needles, soluble in water.

chēl-īd'-ōn-īne, *s.* [From Mod. Lat. *chelidon(ium)* (q. v.), and Eng. &c. suff. *-ine* (q. v.).]

Chem.: A bitter principle extracted from *Chelidonium majus* and *Glaucium luteum*. It consists of 40 atoms of carbon, 20 of hydrogen, 6 of oxygen, and 3 of nitrogen. When pure it forms colorless scales of a bitter taste.

chēl-ī-dō'-nī-ūm, *s.* [CELANDINE.]

Bot.: Celandine, a genus of plants of the order Papaveraceæ. The Greater Celandine is a glaucous hairy annual plant, with pinnately-lobed leaves, small yellow flowers in a loose umbel, and a fruit consisting of a long pod, containing a number of seeds with a small crest on them. It is full of a yellow juice, which is of an acrid poisonous nature, and has been used in certain diseases of the eye, and as a caustic to destroy warts, &c. *Chelidonium majus* is found in the North of Europe, in Siberia, and in Western Asia as far as Persia. Its juice is a virulent acrid poison.

chēl-ī-dōn-īze, *v. i.* [Gr. *chelidonizō*=(1) to twitter like a swallow, (2) see def., from *chelidōn*.]

Gr. antiq.: To sing the swallow-song, *i. e.*, the song welcoming the return of the swallows, which was done by the Rhodian boys in the month of Boëdromion, the act being made a pretext for begging. (*Stainer & Barrett.*)

chēl-ī-dōn-ī'-zīng, *pr. par., a. & s.* [CHELIDONIZE.]

A. & B. As pr. par. & adj.: (See the verb.)

C. As subst.: To sing the “swallow-song.”

chēl-ī-dre, *s.* [O. Fr. *chelydre*; Lat. *chelydrus*; Gr. *chelydros*=an amphibious serpent, from *chelys*=a tortoise, and *hydōr*=water.] A serpent.

“*Chelydre* her yafe her adders skin.”

Grower: C. A., ii. 265.

chēl-īd'-rī-dæ, *s. pl.* [From Lat. *chelydr(us)*, and fem. pl. suff. *-idæ*.]

Zoöl.: The Crocodile Tortoises, a family of Chelonians, in which the tail is long, and the head not retractile. Order, Chelonides.

chēl-ī-fēr, *s.* [Gr. *chēlē*=a claw; Lat. *fero*=to bear.]

Zoöl.: A genus of Arachnidans, Spiders, which have the appearance of small scorpions without the tail.

chēl-ī-fēr'-ī-dæ, *s. pl.* [From Mod. Lat. *chelifer* (q. v.), and Lat. fem. pl. adj. suff. *-idæ*.]

Zoöl.: A family of the class Arachnida, order Adelarthrosmata. For their form see CHELIFER. They are sometimes found among old books, and when disturbed run forward, backward, sideward, or in any direction which they please. They sometimes attack the common fly.

chē-līf'-ēr-ōūs, *a.* [CHELIFER.] Furnished with chelæ or cheliform appendages.

“One of the short *cheliferous* legs.”—*Dana: Crustacea* pt. i., 626.

† *Cheliferous* Slaters:

Zoöl.: The name given to the Cursorial Isopod Crustaceans of the genus Tanais.

chēl-ī-form, *a.* [Gr. *chēlē*=a claw; Lat. *forma*=a form, an appearance.] Having the form or appearance of a claw; claw-shaped.

che-lingue, *s.* [A Tamul (?) word.] The same as MASULAMANÇHE.

chēl-ī-nō'-tūs, *s.* [Gr. *chelys*=a tortoise, and *notos*=the back.]

Zoöl.: A genus of Mollusca, belonging to the Haliotidæ, or Ear-shells; the animal is cheliform: shell ear-shaped, thin, fragile, imperforate, and without a pillar, and entirely concealed in the back of the animal.

chēl'-mōn, *s.* [Gr. *chelmōn* (Hesychus), from *chelōn*=a fish with a long snout.]

Ichthy.: A genus of fishes in which the mouth is prolonged into a slender snout or tube; family, Chætodontidæ. *Chelmon rostratus*, a species found in the seas of China, is kept by the people of that country in basins, that they may witness it projecting drops of water at flies hung above them on strings; their aim in such cases is remarkably exact.

chēlms'-fōrd-īte, *s.* [From Chelmsford in Massachusetts, where it occurs; and suff. *-ite* (*Min.*) (q. v.).]

Min.: A variety of Wernerite (q. v.). The crystals are of a gray-greenish or reddish shade. (*Dana.*)

chē-lō'-dīn-ā, *s.* [Gr. *chelys*=a tortoise; and *eidos*=form, appearance.]

Zoöl.: A genus of the Emydæ, or River Tortoises, in which the neck is remarkably long. Order, Chelonides.

chē-lō'-nē, *s.* [Gr. *chelōnē*=a tortoise.]

1. **Zoöl.**: A genus of turtles, including the tortoise, often written Chelonia. Thus, the common green turtle is called by some naturalists *Chelone midas*, and by others *Chelonia midas*.

2. **Bot.**: A small genus of linariads, closely allied to the Pentstemon. The corolla has a broad-keeled upper lip and scarcely open mouth, giving it some resemblance to the head of a tortoise or turtle, to which it owes its scientific appellation, and the popular name of turtle-head given it in this country. The best-known species is *Chelone obliqua*, a perennial with creeping roots and flowers in terminal spikes, with corollas mostly of a rosy-purple color.

chēl-ō'-nē-æ, *s. pl.* [From Gr. *chelōnē*=a tortoise [CHELONE], and Lat. pl. suff. *-æ*.]

Bot.: A tribe of Scrophulariaceæ plants, type *Chelone* (q. v.).

chē-lō'-nī-ā, *s.* [Gr. *chelōnē*=a tortoise.]

Zoölogy:

1. A genus of reptiles, the typical one of the family Cheloniidæ. It contains the turtles proper. *Chelonia midas* is the Green Turtle, *C. imbricata* the Hawk's-bill Turtle, and *C. caretta* the Loggerhead Turtle. [CHELONE.]

2. In Prof. Owen's classification, the 12th order of the class Reptilia, or Reptiles. It includes the Tortoise, Turtle, &c.

chē-lō'-nī-an, *a. & s.* [CHELONIA.]

A. As adj.: Of or pertaining to the Chelonia.

B. As subst.: One of the order of Chelonia.

“ . . . in the thorax of birds and chelonians . . . ”
—*Owen: Anatomy of Vertebrates*, ch. iii., p. 44.

chē-lō'-nī-ī-dæ, *s. pl.* [Mod. Lat. *cheloni(a)*, and fem. pl. suff. *-idæ*.]

1. **Zoöl.**: The Sea-turtles, a family of the order Chelonia (q. v.). They are all marine.

2. **Palæont.**: The Cheloniidæ appear at least as early as the Portland Stone in the Upper Jurassic beds. They are abundant in the Eocene.

chē-lō-nīte, *s.* [Gr. *chelōnē*=a tortoise, and Eng. suff. *-ite* (q. v.).] A name given to certain species of fossil Echini of the genus Cidaris.

chēl-ō-nō-bā-trā'-chī-ā, *s. pl.* [From Gr. *chelōnē*=a tortoise, and *batrachos*=a frog.]

Zoöl.: A name sometimes given to the amphibian order of Anoura, which contains the frogs and toads.

***chē-lŷ**, *s.* [Lat. *chela*; Gr. *chēlē*=a claw.] The claw of a lobster. [CHELA.]

“It happeneth often, I confess, that a lobster hath the *chely* or great claw, of one side longer than the other.”—*Brown.*

chē-lŷ'-dē-ā, *s.* [From Gr. *chelus*=a tortoise.]

Zoöl.: A genus of turtles, family Emydidæ. *Chelydea serpentina* is the Alligator Tortoise of this country.

chēl-ŷ'-dī-dæ, *s. pl.* [From Lat. *chelys* (q. v.), and fem. pl. adj. suff. *-idæ*.]

Zoöl.: A family of Chelonians. They resemble the Trionycidæ, but have a carapace sufficiently large to allow the head and neck to be retracted within it. Of the five toes, three or four are furnished with claws, whereas in the Trionycidæ only three are thus armed.

chēl-ŷ'-dra, *s.* [From Lat. *chelydrus*; Gr. *chelydros*=a fetid snake, living in water, from *chelys*=a tortoise; and *hydōr*=water.]

Zoöl.: A genus of Chelonians; family Trionycidæ. *Chelydra serpentina* is the Snapping Turtle. It is sometimes called the *Trionyx ferox*. It is found in abundance in this country. It destroys many young alligators, and occasionally bites pieces of flesh from the bodies of any bathers at whom it has an opportunity of snapping.

bōil, bōy; pōut, jōwl; cat, çell, chorus, çhin, bench; go, gem; thin, ðhis; sin, aş; expect, Xenophon, exist. ph = f.
-cian, -tian = şan. -tion, -sion = şhün; -tion, -şion = zhün. -tious, -cious, -sious = şhūs. -ble, -dle, &c. = beł, dēł.

chē'-lŷs, s. [Lat. *chelys*; Gr. *chelys*=a tortoise.]

1. Music:

(1) The lyre of Mercury, supposed to have been formed by strings stretched across a tortoiseshell.
(2) In the 16th and 17th centuries a bass-viol and division-viol were each called chelys. (*Stainer & Barrett*.)

2. Zool.: A genus of turtles, the typical one of the family Chelydidae (q. v.). They live in the ponds and rivers of warm countries, feeding on fish.

***che-mer**, s. [CHIMERE.]

chēm'-ic, ***chŷm'-ick**, a. & s. [In Fr. *chimique*; Sp., Port., and Ital. *chimico*; from Gr. *chymikos*.] [CHEMISTRY, I. 1 (2).]

A. As adj.: Chemical.

B. As subst.: A chemist, an alchemist.

"... these *chymicks*, seeking to turn lead into gold, turn away all their own silver."—*Brewer: Lingua*, iv. 1.

chēm'-ic-al, **chŷm'-ic-al**, a. & s. [Eng. *chemic*; -al.]

A. As adj.: Of or belonging to chemistry, as chemical action; resulting from the forces investigated by chemistry, as chemical changes; designed for such investigation, as the Chemical Society.

B. As subst. (pl. chemicals):

1. Substances having a definite chemical composition, as crystallized cupric sulphate, $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$.
2. Chemical reagents.

¶ **Chemical affinity:** [AFFINITY.]

Chemical analysis: [ANALYSIS.]

Chemical apparatus: Apparatus designed for chemical purposes, such as a blowpipe, retorts, test tubes, reagents, &c.

Chemical attraction: The same as *Chemical affinity* (q. v.).

Chemical combination: The combination of chemical substances into a compound different from any of the constituents, and having a definite percentage composition, and mostly having their vapor densities the halves of their molecular weights. When such union takes place heat is generally evolved. The constituents of a chemical compound cannot be separated by mechanical means. [COMBINATION.]

Chemical deposits:

Geol.: Deposits, like carbonate of lime, thrown down from water by chemical action. They are distinguished from mechanical deposits precipitated by mechanical means. (*Lyell*.)

Chemical equivalents: The relative proportions in which chemical substances will replace one another, according to their atomicity (q. v.); thus one atom of oxygen, a dyad element, is the chemical equivalent of two atoms of hydrogen, a monad element.

Chemical formulæ: The formulæ or symbolic expressions which indicate the chemical constituents of a body, as NaCl indicates that chloride of sodium contains one atom of chlorine and one atom of sodium.

Chemical furnace: A small furnace for laboratory uses.

Chemical nomenclature: In naming various chemical substances the professors of the science have always had due regard to the constituent elements of the candidate for a title. We append a list of the chemical names of a few common substances:

COMMON NAMES.	CHEMICAL NAMES.
Aqua Fortis.....	Nitric Acid.
Aqua Regia.....	Nitro-Muriatic Acid.
Blue Vitriol.....	Sulphate of Copper.
Cream of Tartar.....	Bitartrate Potassium.
Calomel.....	Sub-Chloride of Mercury.
Chalk.....	Carbonate of Calcium.
Salt of Tartar.....	Carbonate of Potassa.
Caustic Potassa.....	Hydrate Potassium.
Chloroform.....	Chloride of Formyle.
Common Salt.....	Chloride of Sodium.
Copperas, or Green Vitriol.....	Sulphate of Iron.
Corrosive Sublimate.....	Bi-Chloride of Mercury.
Dry Alum.....	Sulphate Aluminum and Potassium.
Epsom Salts.....	Sulphate of Magnesia.
Ethiops Mineral.....	Black Sulphide of Mercury.
Fire Damp.....	Light Carburetted Hydrogen.
Galena.....	Sulphide of Lead.
Glauber's Salt.....	Sulphate of Sodium.
Glucose.....	Grape Sugar.
Goulard Water.....	Basic Acetate of Lead.
Iron Pyrites.....	Bi-Sulphide Iron.
Jeweler's Putty.....	Oxide of Tin.
King's Yellow.....	Sulphide of Arsenic.
Laughing Gas.....	Protoxide of Nitrogen.
Lime.....	Oxide of Calcium.
Lunar Caustic.....	Nitrate of Silver.
Mosaic Gold.....	Bi-Sulphide of Tin.
Muriate of Lime.....	Chloride of Calcium.
Niter of Saltpeter.....	Nitrate of Potash.
Oil of Vitriol.....	Sulphuric Acid.
Potash.....	Oxide of Potassium.
Realger.....	Sulphide of Arsenic.
Red Lead.....	Oxide of Lead.

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camēl, hēr, thēre; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; tŷr, Sŷrian. æ, œ = ē; ey = ā. qu = kw.

Rust of Iron.....	Oxide of Iron.
Solammoniac.....	Muriate of Ammonia.
Slacked Lime.....	Hydrate Calcium.
Soda.....	Oxide of Sodium.
Spirits of Hartshorn.....	Aqua Ammonia.
Spirit of Salt.....	Hydro-Chloric or Muriatic Acid.
Stucco, or Plaster of Paris.....	Sulphate of Lime.
Sugar of Lead.....	Acetate of Lead.
Verdigris.....	Basic Acetate of Copper.
Vermilion.....	Sulphide of Mercury.
Vinegar.....	Acetic Acid (Diluted).
Volatile Alkali.....	Ammonia.
Water.....	Oxide of Hydrogen.
White Precipitate.....	Ammoniated Mercury.
White Vitriol.....	Sulphate of Zinc.

Chemical notation: [NOTATION.]

Chemical printing: (See the compound.)

Chemical printing-telegraph: An apparatus for printing symbols upon prepared paper by means of electro-chemical action; as, for instance, by an iron stylus on paper prepared with a solution of yellow cyanide of potassium.

Chemical reagents: Pure chemicals used for testing.

Chemical works: Manufactories where chemical processes are carried out on a large scale.

chēm'-i-cal-lŷ, adv. [Eng. *chemical*; -ly.] By a chemical process; opposed to mechanically, &c.

"... the sun's rays had become so tempered by distance and by waste as to be *chemically* fit for the decomposition necessary to vegetable life."—*Tyndall: Frag. of Science* (3d ed.), vii., 162-3.

chēm'-ick-īng, s. [O. Eng. *chemick*; -ing.]

Bleaching: The process of steeping goods in a dilute solution of chloride of lime in stone vats, the liquor being continuously pumped up and straining through the goods until the action is complete. This precedes the souring which sets free the chlorine. [BUCKING-KIER.]

chēm'-i-glŷph'-ic, a. [From Gr. *chēmeia*=chemistry, and *glŷphō*=to engrave.] Engraved by means of a galvanic battery.

chē-mi'se (1), s. [Fr.; Ital. *camicia*; Sp. & Port. *camisa*, from Low Lat. *camisia*=a shirt; from Arab. *gamis*=a shirt.

1. **Ord. Lang.:** A shift or undergarment worn by females.

2. **Fortif.:** A wall for lining a bastion or ditch.

Bot.: *Convolvulus*, or *Calystegia sepium*.

***chē-mi'se**, (2), ***chemys**, ***chymes**, s. [O. Fr. *chesmez*=the principal house on an estate.] A chief dwelling, as the manor-house of a landed proprietor or the palace of a prince.

"The *chemise* or principall message sould not be devidit nor gevin in name of dowrie or tierce to the woman, . . ."—*Balfour: Pract.*, p. 109.

chēm'-i-ŷette, s. [Fr., dim. of *chemise* (q. v.).] An under garment worn by females over the chemise.

chēm'-ist, ***chŷm'-ist**, s. [A shortened form of *alchemist* (q. v.). In Sw. *kemist*; Dut. *chemist*; Fr. *chimiste*; Sp. *chimista*.]

*1. An alchemist.

"I have observed generally of *chymists* and the sophists, as of several other men more palpably mad, that their thoughts are carried much to astrology."—*H. More: A Brief Discourse of Enthusiasm*, sect. 45. (*Trench*.)

2. One versed in the science of chemistry.

¶ There are different kinds of chemists, as a *pharmaceutical chemist*, an *agricultural chemist*, an *analytical chemist*, a *scientific chemist*, &c.

***chēm'-is'-tic-al**, a. [Eng. *chemist*; -ical.] Relating to chemistry. (*Burton*.)

chēm'-is-trŷ, **chŷm'-is-trŷ**, s. [Eng. *chemist*; -ry. In Sw. *kemi*; Ger. *chemie*; Fr. *chimie*, *chymie*; Sp. *chimia*, *chímica*; Port. *chimica*, *chymica*; Ital. *chimica*; Sp. & Port. *alquimia*, from Arab. *al-kimia*=alchemy. *Hist.* See also ALCHEMY.] The science which investigates the several elements of which bodies, whether organic or inorganic, are composed, and the laws which regulate the combination of these elements and the reactions of chemical compounds on each other.

1. **History:**

(1) **The unknown period:** Claims to have been the originators of chemistry have been put in on behalf of the Egyptians and the Chinese, but details are wanting. The blow-pipe was known to the former people. But their claim to have been the instructors of the Greeks in chemistry is founded on the alleged derivation of the word *chēmeia*=chemistry, from *Chemia*=Egypt. *Chēmeia*, however, is a mediæval Greek word, of which there is an older classical form, with a quite different etymology.

(2) **The Greek period** (that mainly of Pharmacy): That modern chemistry sprung from alchemy, and alchemy came to Europe through the Arabs, are well ascertained facts. But though in the word *al-kimia*, *al* is the Arabic article, *kimia* is not from

a root in Arabic or in any cognate language, but is from the Greek. In the latter tongue there are *chēmeia* and *chēmeutikē*, from which the English spelling *chemistry* comes; *chēmeia* is from Suidas, doubtfully dated by Liddell and Scott, A. D. 1100. An earlier form of *chēmeutikē* was *chymēutikē*, fem. of *chymēutikos*=easily mixing. There is also *chymikē*=chemistry, from *chymikos*=of or concerning juices, this again being from *chyma*=that which is poured out, a liquid. From the latter group of words the English spellings *chymistry*, *chymist*, *chymical*, &c., come. The first stage in the development of chemistry seems then to have been conducted by the Greeks, who gave prominent attention to investigating the properties of plant juices for medicinal purposes. This would now be called pharmacy, though some of the more recondite researches might lay the foundation of organic chemistry.
